Software Installation

1. Software Installation

To develop and test Open AT® applications you must install the Open AT® SDK. This chapter guides you through the installation of the Open AT® SDK.

1.1. System Requirements

To install the Open AT® SDK, your system must support one of the following operating systems:

- Windows 98 / NT / Me / 2000 / XP

IMPORTANT WARNING: The provided GCC compiler runs only on Windows NT/2000/XP versions (it is not supported on Windows 98/ME systems).

1.2. Hardware Requirements

The main requirements for the PC that will support the Open AT® SDK are:

- Pentium 300 MHz or higher with at least 128 MB of RAM and 500 MB free on the hard disk
(Recommended: CPU speed 1GHz or higher, RAM: 256 MBytes or more)
- A CD-ROM drive (for software installation)
- At least 1 free COM (serial) port for the communication with the target product

1.3. Optional Software Requirements

If the user does not wish to use the supplied Eclipse IDE for Open AT, it can install one of the following Visual C++ versions on its system:

- Microsoft Visual C++ Version 6.0
or
- Microsoft Visual C++ .NET 2002 edition (7.0)
or
- Microsoft Visual C++ .NET 2003 edition (7.1)

If the user does not wish to use the supplied GCC compiler for the target mode, it can install and use an ARM Development Suite (ADS) 1.2 compatible tools suite on its system.

2. Installing the Open AT® SDK

Insert the Open AT® SDK CD-ROM in the drive on your PC. If the auto-start is enabled, the installation will automatically start.

If the auto-start is disabled or for some reason the auto-installation does not start, you can use Windows Explorer to launch `setup.exe` from the root folder of the CD-ROM.

After this, the following menu is displayed.

Several operations are possible from this menu:

- Display the Readme.html file, which describes the CD-ROM contents.
- Install the Open AT® SDK.
- Explore the CD-ROM contents.
- Exit the Open AT® installation program.

2.2. Destination location for installation

The Open AT® Software Suite can be installed in any directory on your hard disk.

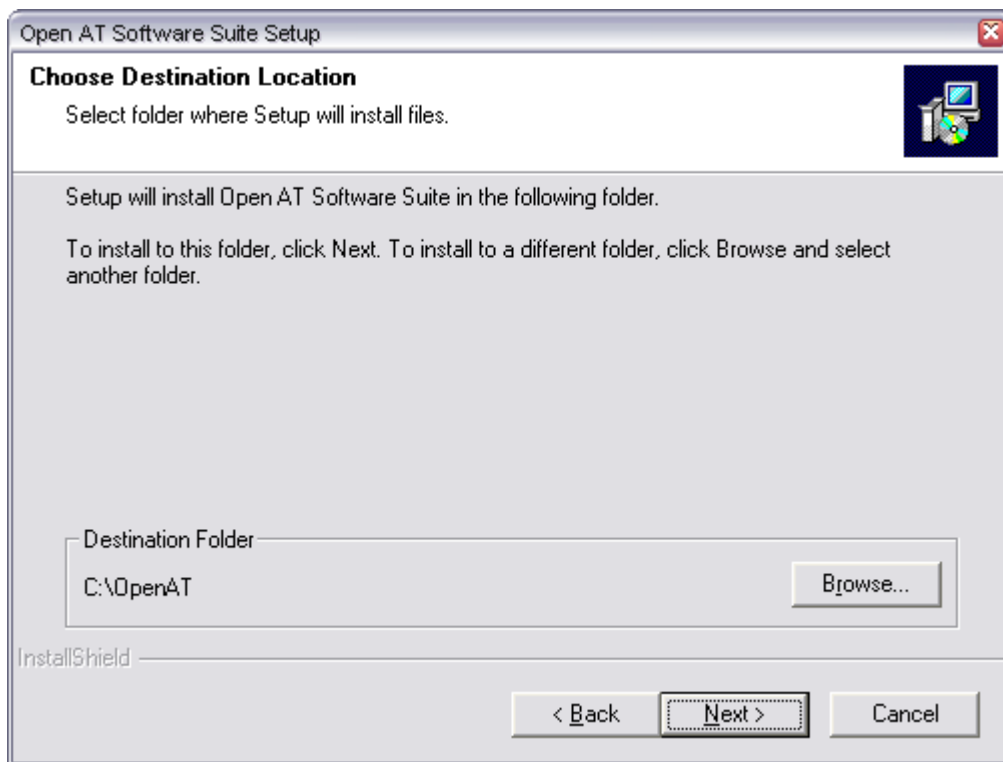

Figure 4 – Open AT® Destination Folder

The default location, as shown in the example above, is under the root folder of the **C:** drive.

If this location is not suitable, enter a different path before clicking **Next**.

The Software Suite's components files will be copied under the specified destination folder. Component sub-versions are automatically processed by the Setup engine: the user only has to select a root location for the Open AT® Software Suite, whatever the installed version.

Caution: This path must not include any space character.

2.3. Setup options

The Open AT® Software Suite Setup allows each supplied component to be installed separately. After browsing for existing versions, the program will automatically check or not each component box, according to whether it is already installed or not on the system. Moreover, the total space required on the disk is calculated according to the user's choice.

Installing the Open AT® SDK

Main components families are:

- Open AT® IDE: tools set usable to configure, develop, build and debug Open AT® applications
- Open AT® OS: the Open AT® API libraries, header, samples & documentation files.
- Open AT® Firmware: Wireless CPU base software and documentation
- Open AT® Plug-ins: additional functionalities packages.

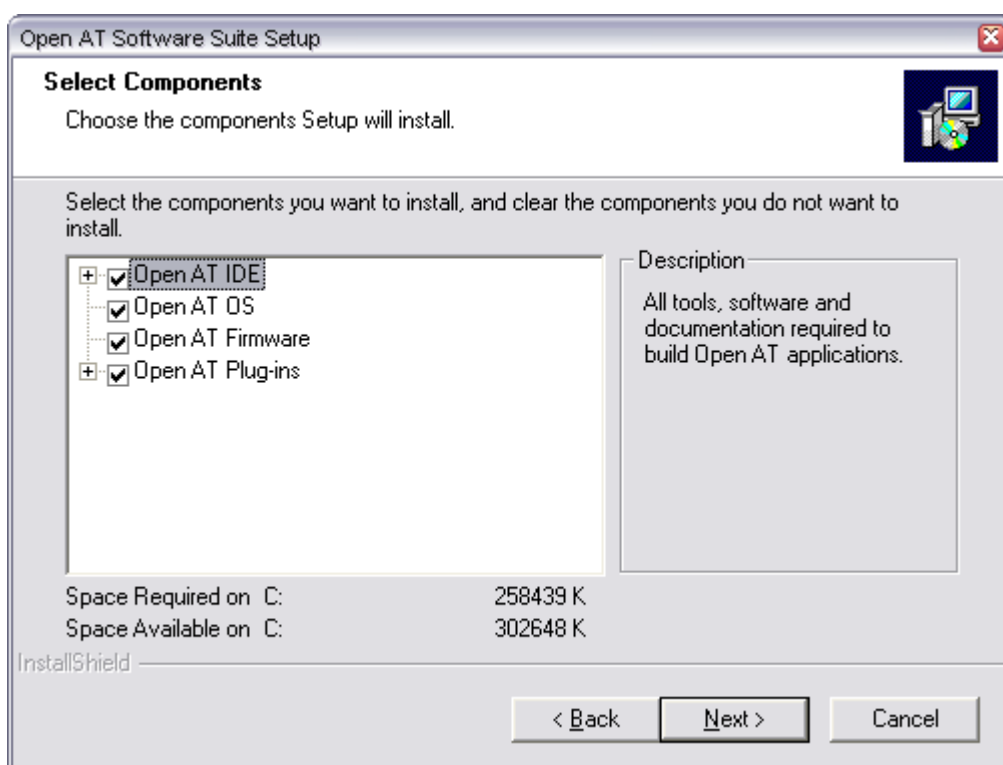

Figure 5 – Setup options

Note:

Some components (as the Java Runtime Environment, or the Wavecom Development Toolkit) are never automatically selected by the setup: the user has to select them itself in order to install the corresponding software.

After the choice of the setup options, select **Next** to continue.

3. Support

Our goal is to provide you with professional assistance in the use of the Open AT® software.

3.1. Contact Us

For support, please contact your regular Wavecom contact.

3.2. Online Support

You can get general information and support material on Open AT® at:
<http://www.wavecom.com>

A range of application notes, some with comprehensive source code such as “Graphic Engine” or “Floating Point” libraries are also available in the product support section.

Registered customers will also have access to the Customer Support section to download the latest updates on Open AT®.

3.3. Open AT® Developers Forum

As a developer of Open AT® Applications, you are invited to join the expanding community of developers in the dedicated online forum. Meet other developers and discuss openly any aspect of Open AT® Software whether it be Open AT® IDE, Open AT® OS, Open AT® Plug-Ins or Open AT® Applications. Join now at:
www.wavecom.com/forum

3.4. Wavecom University

Whether you are new to Open AT® Software or a seasoned programmer, there is something for everyone in Wavecom University. Sign up for an Open AT® Course today and benefit from a 5 day intensive course, designed and conducted by professional trainers, with a strong emphasis on practical hands on programming. More information at: www.wavecom.com/university

3.5. Open AT® Application Gallery

Does your company have a commercially deployed product in your market that encompasses an Open AT® Application? Why not submit it to our online gallery and display it with pride to a global audience and potentially create additional demand for your product? Submissions can be made at: www.wavecom.com/gallery

3.6. GCC compiler support

Wavecom does not offer any support on the GCC cross-compiler provided with the Open AT® SDK. To get assistance on this compiler, please refer to the gcc.gnu.org website.

4. Warranty

Caution: All products under warranty that are sent back to Wavecom for repair must be free of any embedded application.

Wavecom will return all Open AT[®] compatible products under warranty with the default factory configuration.
