CDMA AT Commands Interface Specification

Contents

1	Introduction.....	14
1.1	Scope of this document.....	14
1.2	Related references	14
1.3	Definitions.....	15
2	AT commands features	18
2.1	Wavecom line settings	18
2.2	Command line	18
2.3	Information responses and result codes	18
3	General commands.....	19
3.1	Manufacturer identification +CGMI.....	19
3.1.1	Description :.....	19
3.1.2	Syntax :.....	19
3.2	Request model identification +CGMM.....	19
3.2.1	Description :.....	19
3.2.2	Syntax :.....	19
3.3	Request revision identification +CGMR	19
3.3.1	Description :.....	19
3.3.2	Syntax :.....	20
3.4	Product Serial Number +CGSN	20
3.4.1	Description :.....	20
3.4.2	Syntax :.....	20
3.5	Select TE character set +CSCS.....	20
3.5.1	Description :.....	20
3.5.2	Syntax :.....	20
3.5.3	Defined values :.....	20
3.6	Request IMSI +CIMI.....	21
3.6.1	Description :.....	21
3.6.2	Syntax :.....	21
3.7	Capabilities list +GCAP	21

3.7.1	Description :	21
3.7.2	Syntax :	21
3.8	Repeat last command A/	21
3.8.1	Description :	21
3.8.2	Syntax :	21
3.9	Power off +CPOF	22
3.9.1	Description :	22
3.9.2	Syntax :	22
3.10	Set phone functionality +CFUN	22
3.10.1	Description :	22
3.10.2	Syntax :	22
3.11	Phone activity status +CPAS	22
3.11.1	Description :	22
3.11.2	Syntax :	23
3.11.3	Defined values :	23
3.12	Report Mobile Equipment errors +CMEE	23
3.12.1	Description :	23
3.12.2	Syntax :	23
3.13	Keypad control +CKPD	23
3.13.1	Description :	23
3.13.2	Syntax :	23
3.14	Clock Management +CCLK	24
3.14.1	Description :	24
3.14.2	Syntax :	24
3.15	Ring Melody Playback +CRMP	24
3.15.1	Description	24
3.15.2	Syntax :	24
3.15.3	Defined values :	25
3.16	Ringer Sound Level +CRSL	25
3.16.1	Description :	25
3.16.2	Syntax :	25
3.16.3	Defined values :	25
3.17	Subscriber Number +CNUM	26
3.17.1	Description :	26
3.17.2	Syntax :	26
3.17.3	Defined values :	26
3.18	Select Type of Address +CSTA	26
3.18.1	Description :	26
3.18.2	Syntax :	26
3.18.3	Defined values :	26
3.19	View Module Timers +WTMR	27
3.19.1	Description :	27
3.19.2	Syntax :	27
4	Call Control commands	28
4.1	Dial command D	28
4.1.1	Description :	28
4.1.2	Syntax :	28

4.2	Hang-Up command H.....	29
4.2.1	Description :.....	29
4.2.2	Syntax :.....	29
4.3	Answer a call A.....	29
4.3.1	Description :.....	29
4.3.2	Syntax :.....	29
4.4	Remote disconnection.....	30
4.5	Extended error report +CEER.....	30
4.5.1	Description :.....	30
4.6	DTMF signals +VTD, +VTS.....	30
4.6.1	+VTD Description :.....	30
4.6.2	+VTD Syntax :.....	31
4.6.3	+VTS Description :.....	31
4.6.4	+VTS Syntax :.....	31
4.6.5	Informative example :.....	31
4.7	Redial last telephone number ATDL.....	31
4.7.1	Description :.....	31
4.7.2	Syntax :.....	31
4.8	Automatic dialing with DTR AT%Dn.....	32
4.8.1	Description :.....	32
4.8.2	Defined values :.....	32
4.9	Automatic answer ATSO.....	32
4.9.1	Description :.....	32
4.9.2	Syntax :.....	32
4.10	Incoming Call Bearer +CICB.....	33
4.10.1	Description :.....	33
4.10.2	Syntax :.....	33
4.10.3	Defined values :.....	33
4.11	Single Numbering Scheme +CSNS.....	34
4.11.1	Description :.....	34
4.11.2	Syntax :.....	34
4.11.3	Defined values :.....	34
4.12	Volume Gain control +VGR.....	34
4.12.1	Description :.....	34
4.12.2	Syntax :.....	34
4.13	Microphone Mute Control +CMUT.....	35
4.13.1	Description :.....	35
4.13.2	Syntax :.....	35
4.13.3	Defined values :.....	35
4.14	Speaker & Microphone selection +SPEAKER.....	35
4.14.1	Description.....	35
4.14.2	Syntax :.....	35
4.14.3	Defined values :.....	36
4.15	Echo Cancellation +ECHO.....	36
4.15.1	Description :.....	36
4.15.2	Syntax :.....	36
4.15.3	Defined values:.....	36
4.16	SideTone modification +SIDET.....	36

4.16.1	Description :	36
4.16.2	Syntax :	37
4.16.3	Defined values :	37
5	Network service commands	38
5.1	Signal Quality +CSQ	38
5.1.1	Description :	38
5.1.2	Syntax :	38
5.1.3	Defined values :	38
5.2	Mode Perferece +COPS	38
5.2.1	Description :	38
5.2.2	Syntax :	38
5.2.3	Defined values :	39
5.3	Roam Perferece +WRMP	39
5.3.1	Description :	39
5.3.2	Syntax :	39
5.3.3	Defined values :	40
5.4	Network registration & roaming +CREG	40
5.4.1	Description	40
5.4.2	Syntax :	40
5.4.3	Defined values :	41
5.5	Change NAM Selection +WNAM	41
5.5.1	Description :	41
5.5.2	Syntax :	41
5.5.3	Defined values :	41
5.6	Read Current NAM +WCNM	42
5.6.1	Description :	42
5.6.2	Syntax :	42
6	Short Messages commands	43
6.1	Parameters definition	43
6.2	Select message service +CSMS	43
6.2.1	Description :	43
6.2.2	Syntax :	43
6.2.3	Defined values :	44
6.3	New Message Acknowledgement +CNMA	44
6.3.1	Description :	44
6.3.2	Syntax :	44
6.3.3	Defined values :	45
6.4	Preferred Message Storage +CPMS	45
6.4.1	Description :	45
6.4.2	Syntax :	45
6.4.3	Defined values :	46
6.5	Preferred Message Format +CMGF	46
6.5.1	Description :	46
6.5.2	Syntax :	46
6.5.3	Defined values :	47
6.6	Show text mode parameters +CSDH	47

6.6.1	Description :	47
6.6.2	Syntax :	47
6.7	New message indication +CNMI	47
6.7.1	Description :	47
6.7.2	Syntax :	48
6.7.3	Defined values :	48
6.8	Read message +CMGR	49
6.8.1	Description :	49
6.8.2	Syntax :	50
6.9	List message +CMGL	51
6.9.1	Description :	51
6.9.2	Syntax :	51
6.9.3	Defined values	52
6.10	Send message +CMGS	52
6.10.1	Description :	52
6.10.2	Syntax :	52
6.11	Write Message to Memory +CMGW	53
6.11.1	Description :	53
6.11.2	Syntax :	53
6.11.3	Defined values :	53
6.12	Send Message From Storage +CMSS	53
6.12.1	Description :	53
6.12.2	Syntax :	53
6.13	Delete message +CMGD	54
6.13.1	Description :	54
6.13.2	Syntax :	54
6.13.3	Defines values	54
6.14	Message status modification +WMSC	55
6.14.1	Syntax :	55
6.15	Message overwriting +WMGO	56
6.15.1	Description :	56
6.15.2	Syntax :	56
6.16	Unchange SMS Status +WUSS	56
6.16.1	Description :	56
6.16.2	Syntax :	56
7	Supplementary Services commands	58
7.1	Call forwarding +CCFC	58
7.1.1	Description :	58
7.1.2	Syntax :	58
7.1.3	Defined values	58
7.2	Call barring +CLCK	58
7.2.1	Description :	58
7.2.2	Syntax :	59
7.3	Calling line identification restriction +CLIR	59
7.3.1	Description :	59
7.3.2	Syntax :	59
7.3.3	Defined values :	59

7.4	Calling line identification presentation +CLIP	60
7.4.1	Description :	60
7.4.2	Syntax :	60
7.4.3	Defined values :	60
7.5	Send Flash to Base Station +WFSH	60
7.5.1	Description :	60
7.5.2	Syntax :	61
7.6	List current call state +CLCC	62
7.6.1	Description :	62
7.6.2	Syntax :	62
7.6.3	Defined values :	62

8 Data commands.....63

8.1	Using AT Commands during a data connection.....	63
8.1.1	Switch from online to offline mode	63
8.1.2	Switch from offline to online mode	63
8.2	Select mode +FCLASS	63
8.2.1	Description.....	63
8.2.2	Syntax :	63
8.2.3	Defined values :	64
8.3	Cellular result codes +CRC.....	64
8.3.1	Description :	64
8.3.2	Syntax :	64
8.4	DTE-DCE local rate reporting +ILRR	64
8.4.1	Description :	64
8.4.2	Syntax :	65
8.5	V42 bis data compression +DS.....	65
8.5.1	Description :	65
8.5.2	Syntax :	65
8.5.3	Defined values :	65
8.6	V42 bis data compression report +DR	66
8.6.1	Description :	66
8.6.2	Syntax :	66

9 V24-V25 commands.....67

9.1	Fixed DTE rate +IPR	67
9.1.1	Description :	67
9.1.2	Syntax :	67
9.2	DTE-DCE character framing +ICF	68
9.2.1	Description :	68
9.2.2	Syntax :	68
9.2.3	Defined values :	68
9.3	DTE-DCE local flow control +IFC.....	69
9.3.1	Description :	69
9.3.2	Syntax :	69
9.3.3	Defined values :	69
9.4	Set DCD signal &C.....	70
9.4.1	Description :	70

9.4.2	Syntax :	70
9.5	Set DTR signal &D	70
9.5.1	Description :	70
9.5.2	Syntax :	70
9.6	Back to online mode O	70
9.6.1	Description.....	70
9.6.2	Syntax.....	71
9.7	Result code suppression Q	71
9.7.1	Description :	71
9.7.2	Syntax :	71
9.8	DCE response format V	71
9.8.1	Description :	71
9.8.2	Syntax :	71
9.9	Auto-tests &T	71
9.9.1	Description:	71
9.9.2	Defined Values:	72
9.10	Echo E	72
9.10.1	Description :	72
9.10.2	Syntax :	72
9.11	Display configuration &V	72
9.11.1	Description.....	72
9.11.2	Syntax :	73
9.12	Request Identification Information I	73
9.12.1	Description :	73
9.12.2	Defined values.....	73
10	Specific AT commands	74
10.1	Cell environment description +CCED	74
10.1.1	Description :	74
10.1.2	Syntax :	74
10.1.3	Defined values :	74
10.2	Automatic RxLev indication +CCED	74
10.2.1	Description :	74
10.2.2	Syntax :	75
10.2.3	Defined values :	75
10.3	General Indications +WIND	75
10.3.1	Description :	75
10.3.2	Syntax :	75
10.3.3	Defined values :	76
10.4	Analog digital converters measurements +ADC	77
10.4.1	Description :	77
10.4.2	Syntax :	77
10.4.3	Defined values :	77
10.5	Mobile Equipment event reporting +CMER	77
10.5.1	Description :	77
10.5.2	Syntax :	77
10.5.3	Defined values :	77
10.6	Read GPIO value +WIOR	78

10.6.1	Description.....	78
10.6.2	Syntax.....	78
10.6.3	Defined values.....	78
10.7	Write GPIO value +WIOW.....	78
10.7.1	Description.....	78
10.7.2	Syntax.....	78
10.7.3	Defined values.....	79
10.8	Play tone +WTONE.....	79
10.8.1	Description :.....	79
10.8.2	Syntax :.....	79
10.8.3	Defined values :.....	79
10.9	Play DTMF tone +WDTMF.....	80
10.9.1	Description :.....	80
10.9.2	Syntax :.....	80
10.9.3	Defined values :.....	80
10.10	Hardware Version +WHWV.....	80
10.10.1	Description :.....	80
10.10.2	Syntax :.....	81
10.11	Wavecom Select Voice Gain +WSVG.....	81
10.11.1	Description :.....	81
10.11.2	Syntax :.....	81
10.11.3	Defined values.....	81
10.12	Wavecom Status Request +WSTR.....	82
10.12.1	Description :.....	82
10.12.2	Syntax :.....	82
10.12.3	Defined values.....	82
10.13	Wavecom Ring Indicator Mode +WRIM.....	82
10.13.1	Description :.....	82
10.13.2	Syntax :.....	83
10.13.3	Defined values.....	83
10.14	Wavecom 32kHz Sleep Mode +W32K.....	83
10.14.1	Description :.....	83
10.14.2	Syntax :.....	83
10.14.3	Defined values.....	84
10.15	Wavecom Change Default Melody +WCDM.....	84
10.15.1	Description :.....	84
10.15.2	Syntax :.....	84
10.15.3	Defined values.....	84
10.16	Wavecom Software version +WSSW.....	85
10.16.1	Description :.....	85
10.16.2	Syntax :.....	85
10.17	Wavecom Custom Character Set +WCCS.....	85
10.17.1	Description :.....	85
10.17.2	Syntax :.....	85
10.17.3	Defined values.....	86
10.18	CPHS command +CPHS.....	86
10.18.1	Description :.....	86
10.18.2	Syntax.....	86
10.18.3	Defined values:.....	86

10.19	Unsolicited result : Wavecom Voice Mail Indicator +WVMI.....	87
10.19.1	Description :	87
10.19.2	Example.....	87
10.20	Wavecom Change Default Player +WCDP	88
10.20.1	Description.....	88
10.20.2	Syntax.....	88
10.20.3	Defined values :	88
10.21	Wavecom Reset +WRST.....	88
10.21.1	Description.....	88
10.21.2	Syntax.....	88
10.21.3	Defined values :	89
10.22	Set Standard Tone +WSST	89
10.22.1	Description :	89
10.22.2	Syntax :	89
10.22.3	Defined values :	89
10.23	Set voice privacy level +WPRV	90
10.23.1	Description :	90
10.23.2	Syntax :	90
11	Extended AT commands in IS707.3	91
12	Qualcomm Defined AT commands for CDMA operation.....	94
13	Unsolicited AT Result Codes	98
13.1	Cell Broadcast Message Directly Displayed +CBM	98
13.1.1	Description :	98
13.1.2	Syntax :	98
13.2	Cell Broadcast Message Stored in Memory +CBMI.....	98
13.2.1	Description :	98
13.2.2	Syntax :	98
13.3	Cell Environment Description Indication +CCED	99
13.3.1	Description :	99
13.3.2	Syntax :	99
13.4	Call Waiting Indication +CCWA.....	99
13.4.1	Description :	99
13.4.2	Syntax :	99
13.5	SMS Status Report Indication Directly Displayed +CDS	99
13.5.1	Description :	99
13.5.2	Syntax :	99
13.6	SMS Status Report Indication Stored in Memory +CDSI.....	100
13.6.1	Description :	100
13.6.2	Syntax :	100
13.7	Key Press or Release +CKEV	100
13.7.1	Description :	100
13.7.2	Syntax :	100
13.7.3	Defined values :	100
13.8	Caller ID Presentation +CLIP	100

13.8.1	Description :	100
13.9	Incoming Message Directly Displayed +CMT	101
13.9.1	Description :	101
13.9.2	Syntax :	101
13.10	Incoming Message Stored in Memory +CMTI	101
13.10.1	Description :	101
13.10.2	Syntax :	101
13.11	Mode Preference +COPS	102
13.11.1	Description :	102
13.11.2	Syntax :	102
13.12	Registration & Roaming +CREG	102
13.12.1	Description :	102
13.12.2	Syntax :	102
13.13	Incoming Call +CRING	103
13.13.1	Description :	103
13.13.2	Syntax :	103
13.14	Automatic RxLev Indication +CSQ	103
13.14.1	Description :	103
13.14.2	Syntax :	103
13.15	Incoming Call +RING	103
13.15.1	Description :	103
13.15.2	Syntax :	103
13.16	Call Answered +WANS	104
13.16.1	Description :	104
13.16.2	Syntax :	104
13.17	Call Connected +WCNT	104
13.17.1	Description :	104
13.17.2	Syntax :	104
13.18	Call Ended +WEND	105
13.18.1	Description :	105
13.18.2	Syntax :	105
13.19	Feature Notification Message +WFNM	106
13.19.1	Description :	106
13.19.2	Syntax :	106
13.20	Flash indication +WFSH	106
13.20.1	Description :	106
13.20.2	Syntax :	106
13.21	Wavecom General Indicator +WIND	106
13.21.1	Description :	106
13.21.2	Syntax :	106
13.21.3	Defined values :	107
13.22	Call Originated +WORG	107
13.22.1	Description :	107
13.22.2	Syntax :	107
13.23	Call Privacy indication +WPRV	107
13.23.1	Description :	107
13.24	Roaming indication +WROM	108

13.24.1 Description :	108
13.25 Current NAM Change +WNAM	108
13.25.1 Description :	108
13.26 Wavecom Voice Mail Indicator +WVMI	109
13.26.1 Description :	109
13.26.2 Syntax :	109
13.26.3 Defined values :	109
14 Appendices	110
14.1 MS error result code : +CME ERROR: <error>	110
14.2 Message service failure result code: +CMS ERROR : <er>	111
14.3 Specific error result codes	111
14.4 Extended Error Report (+CEER) Call Processing codes	111
14.5 Final result codes	112
14.6 Intermediate result codes	113
15 APPENDIX A (informative)	114
15.1 Example 1: When the MS has already been powered on	114
15.1.1 Examples where a voice call is originated	114
15.1.2 Example with incoming calls	114
15.1.3 Example of a call waiting situation	115
15.2 Examples about short messages	115
15.2.1 Example 1: Receive a short message	115
15.2.2 Example 2: Send a short message	115
15.2.3 Example 3: Read short messages	116
16 APPENDIX (standard): TIA/EIA/IS-707.3	117

1 Introduction

As a wireless module, the AT command set is one of the main interfaces for the module to interact with an external application layer. CDMA AT commands are defined in TIA/EIA/IS707.3. However, as the wireless applications increases, TIA/EIA/IS707.3 is not sufficient. In addition, a lot of GSM applications already exist and GSM customers would like to maintain the same interface in order to make no or minimum changes to the applications to be used with CDMA module. To meet the all these needs, Wavecom WISMOQ CDMA AT command set is designed to cover: 1) IS707.3 AT commands; 2) GSM 07.07 when applicable; 3) GSM 07.05 when applicable, 4) ITU-T v25 when applicable; 5) Wavecome proprietary AT set; 6) Customer specific AT commands; 7) Qualcomm defined AT commands. Please note that is several instances, the GSM 7.07 and 7.05 specifications could not be followed because of fundamental differences between CDMA and GSM call processing behaviors. In these cases, minimal changes were made to the GSM related commands.

1.1 Scope of this document

This document describes the WISMOQ CDMA AT command, its syntax, its response, and result codes. It serves as the reference for wireless application development based on WISMOQ CDMA module, and for the integration and testing.

This document is also intended to be used for North American market, SIM/R-UIM and its related AT commands are not documented here.

1.2 Related references

This interface specification is based on the following recommendations or standards:

1.3 Definitions

This is an alphabetical list of terms and acronyms used throughout this document and the CDMA cellular industry:

2G: Second Generation. All digital cellular systems developed to replace the first analog cellular systems (GSM and CDMA).

3G: Third Generation. Next generation digital cellular systems designed to have high speed data access and higher voice capacity (WCDMA & CDMA2000).

CBM: Cell Broadcast Message. An SMS message that is broadcast to all mobiles on the network.

CDMA : Code Division Multiple Access. CDMA is a spread spectrum, digital wireless modulation scheme for cellular communication systems. It has approximately 3 times the voice capacity of GSM networks. See IS-95, IS-95A, IS-95B, IS-2000.

CDMA2000: See IS-2000.

DCE: Data Communications Equipment. This is the modem in the traditional serial communication paradigm of a computer connected via two modems to another computer.

DTE: Data Terminal Equipment. This is the computer in the traditional serial communication paradigm of a computer connected via two modems to another computer.

DTMF: Dual Tone Multi-Frequency: A pre-defined set of tones sent over the air when keys are pressed on the keypad.

Handset (Path): The audio path (microphone & speaker) that connects to a traditional hand held telephone receiver, usually dual balanced electrical lines.

Headset (Path): The audio path (microphone & speaker) that connects to a earpiece with a microphone, usually single electrical lines.

IMSI: International Mobile Station ID. This is a international 15 digit phone number that uniquely identifies a mobile. IMSI = MCC + MNC + MIN.

IS-95: The first CDMA standard published by Qualcomm in 1993.

IS-95A: A CDMA standard with improved voice quality. This standard is widely used throughout the world.

IS-95B: This CDMA standard contains Medium Data Rate capabilities and bug fixes for system access failures. It is considered a 2.5G system. This standard is mostly deployed in Korea.

IS-2000: The first 3G CDMA standard based on IS-95B. It contains a significant increase in voice capacity and high speed data rates. It is backward compatible with IS-95B and IS-95A. The CDMA WISMOQ is IS-2000 compatible.

MCC: Mobile Country Code. A pre-defined 3-digit number that represents a country in the IMSI.

MIN: Mobile ID Number: The traditional 10 digit phone number of the mobile.

MNC: Mobile Network Code. A pre-defined 2-digital number that represents a sub-network in the IMSI (usually set to "00").

MO: Mobile Originated. An action (usually a call) that is first started from the phone. An outgoing call or SMS.

MS: Mobile Station. The term MS is commonly used to represent the phone or mobile.

MT: Mobile Terminated: An action (usually a call) that is first started from a land based network. An incoming call or SMS.

MSM: Mobile Station Modem. This is the main processing ASIC for a CDMA phone.

NAM: Number Assignment Module. The NAM is collection of internal parameters that define a working phone for a given network (phone number, access parameters, etc.). The WISMOQ supports up to four NAMs.

NID: Network ID. The NID is an identification number that represents geographic location of a common coverage area; but is a subset of the SID, usually a neighborhood in a large city. NID is usually not used and is set to zero. Also see SID.

NV-RAM: Non-Volatile Random Access Memory. NV-RAM is a data storage device that does not lose its data when power is turned off.

OTAPA: Over The Air Parameter Administration. An automatic update in internal software parameters (PRL for example) by means of a specially defined CDMA data call that is mobile terminated (MT).

OTASP: Over The Air Service Programming. An automatic update in internal software parameters (PRL for example) by means of a specially defined CDMA data call that is mobile originated (MO).

PDU: A GSM SMS standard where any type of binary data can be transported via an SMS message.

PN Offset: Pseudorandom Noise Offset: In a CDMA network, the PN offset is a variable time delay offset of a repeating random noise generator that is used to distinguish individual sectors of a base station.

P-REV: The CDMA revision of the mobile or base station.

PRL: Preferred Roaming List. The PRL is a collection of Frequencies, SIDs, and NIDs that the call processing software uses to search for approved and unapproved CDMA networks. The PRL is loaded into the phone and is saved in NV-RAM.

PSTN: Public Switching Telephone Network. The traditional telephone network.

RF: Radio Frequency.

RSSI: Receive Signal Strength Indicator: This parameter represents the total RF received signal power from the base station(s) the mobile sees.

SID: System ID. The SID is an identification number that represents geographic location of a common coverage area, usually a large city. Also see NID.

SMS: Short Messaging Service: A supplemental service that is capable of sending and receiving short length text messages to/from the mobile.

TA/TE: Terminal Application/Terminal Equipment. This is the end “device” (combination of hardware and software) that communicates with a modem via a serial link. In this context, it is the device (PDA/Computer) connected to the WISMOQ. Also see DTE.

V24-V25: A data compression algorithm.

V42: A data compression algorithm.

2 AT commands features

2.1 Wavecom line settings

A serial link handler is set with the following default values (factory settings):
autobaud, 8 bits data, 1 stop bit, no parity, RTS/CTS flow control.

Please use the +IPR, +IFC and +ICF commands to change these settings.

2.2 Command line

Commands always start with AT (which means ATtention) and finish with a <CR> character.

2.3 Information responses and result codes

Responses start and end with <CR><LF>, except for the ATV0 DCE response format) and the ATQ1 (result code suppression) commands.

- If command syntax is incorrect, an **ERROR** string is returned.
- If extended error reports are enabled (+CMEE), the **+CME ERROR: <Err>** or **+CMS ERROR: <SmsErr>** strings are returned with different error codes.
- If the command line has been performed successfully, an **OK** string is returned.

In the following examples <CR> and <CR><LF> are intentionally omitted.

3 General commands

3.1 Manufacturer identification +CGMI

3.1.1 Description :

This command gives the manufacturer identification.

3.1.2 Syntax :

Command syntax : AT+CGMI

Command	Possible responses
AT+CGMI <i>Note : Get manufacturer identification</i>	+CGMI: WAVECOM MODEM OK <i>Note : Command valid, Wavecom modem</i>

3.2 Request model identification +CGMM

3.2.1 Description :

This command is used to get the supported frequency bands. With multi-band products the response may be a combination of different bands.

3.2.2 Syntax :

Command syntax : AT+CGMM

Command	Possible responses
AT+CGMM <i>Note : Get hardware version</i>	+CGMM: 800 1900 OK <i>Note : CDMA 800 MHz band and 1900 (PCS)</i>

3.3 Request revision identification +CGMR

3.3.1 Description :

This command is used to get the revised software version.

3.3.2 Syntax :

Command syntax : AT+CGMR

Command	Possible responses
AT+CGMR <i>Note : Get software version</i>	+CGMR: S/W VER: WISMOQ WQ1.1 Mar 20 2002 17:30:00 OK <i>Note : Software Version WISMOQ, revision WQ1.1 generated on the March 20th, 2002 at 17:30:00</i>

3.4 Product Serial Number +CGSN

3.4.1 Description :

This command allows the user application to get the ESN of the product.

3.4.2 Syntax :

Command syntax : AT+CGSN

Command	Possible responses
AT+CGSN <i>Note : Get the ESN</i>	+CGSN: FE7A7704 OK <i>Note : ESN read from NV</i>

3.5 Select TE character set +CSCS

3.5.1 Description :

This command informs the MS which character set is used by the TE. The MS can convert each character of entered or displayed strings. This is used to send, read or write short messages.

3.5.2 Syntax :

Command syntax : AT+CSCS=<Character Set>

Command	Possible responses
AT+CSCS="CDMA" <i>Note : CDMA default alphabet</i>	OK <i>Note : Command valid</i>
AT+CSCS="PC437" <i>Note : PC character set code page 437</i>	OK <i>Note : Command valid</i>
AT+CSCS=? <i>Note : Get possible values</i>	+CSCS: ("PC437", "CDMA", "CUST") OK <i>Note : Possible values</i>

3.5.3 Defined values :

<Character Set>

"CDMA" CDMA default alphabet.

"PC437" PC character set code page 437.

“CUST” Custom Character set.

3.6 Request IMSI +CIMI

3.6.1 Description :

This command is used to read and identify the IMSI (International Mobile Subscriber Identity) of the SIM card. The PIN may need to be entered before reading the IMSI.

3.6.2 Syntax :

Command syntax : AT+CIMI

Command	Possible responses
AT+CIMI <i>Note : Read the IMSI</i>	+CIMI: 310008585551212 <i>Note : IMSI value (15 digits)</i>

3.7 Capabilities list +GCAP

3.7.1 Description :

This command gets the complete list of capabilities.

3.7.2 Syntax :

Command syntax : AT+GCAP

Command	Possible responses
AT+GCAP <i>Note : Get capabilities list</i>	+GCAP: +CGSM, +CIS707, +MS, +ES, +DS, +FCLASS OK

3.8 Repeat last command A/

3.8.1 Description :

This command repeats the previous command. Only the A/ command itself cannot be repeated.

3.8.2 Syntax :

Command syntax : A/

Command	Possible responses
A/ <i>Note : Repeat last command</i>	

3.9 Power off +CPOF

3.9.1 Description :

This **specific** command stops the CDMA software stack as well as the hardware layer. The AT+CFUN=0 command is equivalent to +CPOF.

3.9.2 Syntax :

Command syntax : AT+CPOF

Command	Possible responses
AT+CPOF <i>Note : Stop CDMA stack</i>	OK <i>Note : Command valid</i>

3.10 Set phone functionality +CFUN

3.10.1 Description :

This command selects the mobile station's level of functionality. When the application wants to stop the product with a power off, then it must send: AT+CFUN=0 (equivalent to AT+CPOF)

The AT+CFUN=1 command restarts the entire CDMA stack and CDMA functionality: a complete software reset is performed. In addition, the OK response will be sent at the last baud rate defined by the +IPR command.

3.10.2 Syntax :

Command syntax : AT+CFUN=<functionality level>

Command	Possible responses
AT+CFUN? <i>Note : Ask for current functionality level</i>	+CFUN: 1 OK <i>Note : Full functionality</i>
AT+CFUN=0 <i>Note : Perform power off</i>	<i>Note : Command valid</i>
AT+CFUN=1 <i>Note : Perform software reset</i>	<i>Note : Command valid</i>

3.11 Phone activity status +CPAS

3.11.1 Description :

This command returns the activity status of the mobile equipment.

3.11.2 Syntax :

Command syntax : AT+CPAS

Command	Possible responses
AT+CPAS <i>Note : Current activity status</i>	+CPAS: <pas> OK

3.11.3 Defined values :

<pas>

- 0 ready (allow commands from TA/TE)
- 1 unavailable (does not allow commands)
- 2 unknown
- 3 ringing (ringer is active)
- 4 call in progress
- 5 asleep (low functionality)

3.12 Report Mobile Equipment errors +CMEE
3.12.1 Description :

This command disables or enables the use of the "+CME ERROR : <xxx>" or "+CMS ERROR :<xxx>" result code instead of simply "ERROR". See section 14.1 for +CME ERROR result codes description and section 14.2 for +CMS ERROR result codes.

3.12.2 Syntax :

Command syntax : AT+CMEE=<error reporting flag>

Command	Possible responses
AT+CMEE=0 <i>Note : Disable MS error reports, use only « ERROR »</i>	OK
AT+CMEE=1 <i>Note : Enable «+CME ERROR: <xxx>» or «+CMS ERROR: <xxx>»</i>	OK

3.13 Keypad control +CKPD
3.13.1 Description :

This command emulates the MS keypad by sending each keystroke as a character in a <keys> string.

If emulation fails, a +CME ERROR: <err> is returned.

If emulation succeeds, the result depends on the CDMA sequence activated: <keys>: string of the following characters (0-9,*,#).

3.13.2 Syntax :

Command syntax : AT+CKPD=<keys>

Command	Possible responses
---------	--------------------

AT+CKPD="*#21#" <i>Note : Key sequence allowed</i>	OK
AT+CKPD="1234" <i>Note : Sequence not allowed</i>	+CME ERROR 3

3.14 Clock Management +CCLK

3.14.1 Description :

This command is used to set or get the current date and time of the MS real-time clock.

String format for date/time is: "yy/MM/dd, hh:mm:ss".

Valid years are 98 (for 1998) to 97 (for 2097). The seconds field is not mandatory.

Default date/time is "98/01/01,00:00:00" (January 1st, 1998 / midnight).

3.14.2 Syntax :

Command syntax : AT+CCLK=<date and time string>

Command	Possible responses
AT+CCLK="00/06/09,17:33:00" <i>Note : set date to June 9th, 2000, and time to 5:33pm</i>	OK or ERROR <i>Note : Date/Time stored – ERROR returned when RTC not enabled.</i>
AT+CCLK="00/13/13,12:00:00" <i>Note : Incorrect month entered</i>	+CME ERROR 3
AT+CCLK? <i>Note : Get current date and time</i>	+CCLK: "00/06/09,17:34:23" <i>Note : current date is June 9th, 2000 current time is 5:34:23 pm – network time if available, otherwise RTC time if enabled.</i>

3.15 Ring Melody Playback +CRMP

3.15.1 Description

This command allows a melody to be played. All melodies are manufacturer defined. Ten manufacturer-defined melodies can be played back (in a loop).

Note:

loop melodies (for voice/data/fax call) must be stopped by a +CRMP command with the <index> field set to 0 (example: +CRMP=0,,,0).

When the <volume> parameter is given, this overwrites the <sound level> value of the +CRSL command. If the <volume> parameter is not given, the <sound level> value of +CRSL is used as default value.

3.15.2 Syntax :

Command syntax : AT+CRMP=<call type>[,<volume>,<type>,<index>]

Command	Possible responses
AT+CRMP=0,2,0,2 <i>Note : Play voice call melody index 2 with volume level 2.</i>	OK <i>Note : Melody Playback.</i>

AT+CRMP=0,,0 <i>Note : Stop the melody.</i>	OK <i>Note : The melody is stopped.</i>
AT+CRMP=? <i>Note : supported parameters</i>	+CRMP: (0-3),(0-3),(0-0),(0-10) OK

3.15.3 Defined values :

<call type>

- 0 Incoming voice call
- 1 Incoming data call
- 2 Incoming fax call
- 3 Incoming short message (SMS)

<volume>

- 0 Min volume
- ...
- 1 Default volume
- 3 Max volume

<type>

- 0 Manufacturer Defined (default)

<index>

- 0 Stop Melody Playback
- 1-10 Melody ID for voice/data/fax call type (default : 1)
- 1-2 Melody ID for short message (default : 1)

3.16 Ringer Sound Level +CRSL

3.16.1 Description :

This command is used to set/get the sound level of the ringer on incoming calls. The set command changes the default <volume> value of the +CRMP command.

3.16.2 Syntax :

Command syntax : AT+CRSL=<sound level>

Command	Possible responses
AT+CRSL=0 <i>Note : Set volume to Min.</i>	OK <i>Note : Current ring playing with Min. volume.</i>
AT+CRSL=3 <i>Note : Set volume to Max.</i>	OK <i>Note : Current ring playing with Max. volume.</i>
AT+CRSL? <i>Note : get current ringer sound level</i>	+CRSL: 3 OK <i>Note : Current level is 3 (max.)</i>
AT+CRSL=? <i>Note : supported parameters</i>	+CRSL: (0-3) OK

3.16.3 Defined values :

<sound level>

- 0 Min volume
- 1 Default volume (default)
- 3 Max volume

3.17 Subscriber Number +CNUM

3.17.1 Description :

This command is used to return the subscriber MSISDN. If the subscriber has different MSISDNs for different services, each MSISDN is returned in a separate line.

3.17.2 Syntax :

Command syntax : AT+CNUM

Command	Possible responses
AT+CNUM <i>Note : Get MSISDN</i>	+CNUM : "Phone", "8585551212", 129 <i>Note : MSISDNs</i>
AT+CNUM=?	+CNUM: OK

3.17.3 Defined values :

<alphax> optional alphanumeric string associated with <numberx>
 <numberx> string type phone number with format as specified by <typex>
 <typex> type of address byte in integer format – only supports 129

3.18 Select Type of Address +CSTA

3.18.1 Description :

This command is used to select the type of phone address to use.

3.18.2 Syntax :

Command syntax : AT+CSTA=<typex>

Command	Possible responses
AT+CSTA? <i>Note : Get type of address</i>	+CSTA: 129 <i>Note: Local Number format</i>
AT+CSTA=? <i>Note : Get supported addres types</i>	+CSTA: (129-129) OK

3.18.3 Defined values :

<typex> type of address byte in integer format – only supports 129

3.19 View Module Timers +WTMR

3.19.1 Description :

This command is used to read the module's accumulated internal timers. These timers include UpTime, Call Time, and Call Count. UpTime is the number of seconds the module has been running since boot-up. Call Time is the total number of seconds the module has been in a call since manufacture (Voice, Data, Fax, OTASP, and CDMA Test Calls; but SMS is not included). Call count is the total number of calls made since manufacture. The range of all the returned items is 0 to 4294967295 (136 years).

3.19.2 Syntax :

Command syntax: AT+WTMR

Response syntax:

+WTMR: <Uptime>, <Call Time>, <Call Count>

Command	Possible responses
AT+WTMR <i>Note : See Module Timers</i>	+WTMR: 1029, 45670, 289 OK <i>Note: Uptime = 1029 seconds Call Time = 45670 seconds Call Count = 289 calls</i>

4 Call Control commands

4.1 Dial command D

4.1.1 Description :

The ATD command is used to originate a **voice, data or fax call**. The dial command also controls supplementary services.

For a **data** or a **fax call**, the application sends the following ASCII string to the product (the bearer must be previously selected with the +CBST command):

ATD<nb> where <nb> is the destination phone number.

Note: **ATD<nb>** is followed by PPP negotiation.

For a **voice call**, the application sends the following ASCII string to the product:

ATD<nb>; where <nb> is the dialing string or destination phone number, followed a semicolon “;”. The dialing string may only contain characters “0-9”, “#”, “*” only. Note that some countries may have specific numbering rules for their CDMA handset numbering.

The response to the ATD command is one of the following:

Verbose result code	Numeric code (with ATV0 set)	Description
OK	0	Command executed (voice)
CONNECT <speed>	10,11,12,13,14,15	if the call succeeds, for data calls only, <speed> takes the value negotiated by the product.
BUSY	7	If the called party is already in communication,
NO ANSWER	8	If no hang up is detected after a fixed network time-out
NO CARRIER	3	Call setup failed or remote user release.

4.1.2 Syntax :

Command syntax : ATD<nb>[:;]

Command	Possible responses
ATD18005551212; <i>Note: Attempt a voice call.</i>	OK <i>Note: Command executed</i> +WORG:18005551212 <i>Note: Voice call origination sent to Base Station with dial string “18005551212”.</i> +WCNT: 9 <i>Note: Call Connected, CDMA traffic channel established with service option 9. You can now hear</i>

	<i>audio of the calling party's phone ringing. However, this event does not means the other calling party has answered. See section 14.7 Unsolicited commands.</i>
ATD5551212; <i>Note : Example of a failed voice call attempt.</i>	OK <i>Note: Command executed</i> +WORG:5551212 <i>Note: Voice call origination sent to Base Station with dialing string "5551212".</i> +WEND: 3 <i>Note: Call Attempt failed/ended. Reason 3, signal faded. See section 14.7 Unsolicited commands.</i>

4.2 Hang-Up command H

4.2.1 Description :

The ATH (or ATH0) command is used by the application to disconnect the remote user. In the case of multiple calls, all calls are released (active, on-hold and waiting calls).

The specific Wavecom ATH1 command has been appended to disconnect the current outgoing call, only in dialing or alerting state (ie. ATH1 can be used only after the ATD command, and before its terminal response (OK, NO CARRIER, ...)). It can be useful in the case of multiple calls.

4.2.2 Syntax :

Command syntax : ATH

Command	Possible responses
ATH <i>Note : Ask for disconnection</i>	OK <i>Note : Every call, if any, are released</i>
ATH1 <i>Note : Ask for outgoing call disconnection</i>	OK <i>Note : Outgoing call, if any, is released</i>

4.3 Answer a call A

4.3.1 Description :

When the product receives a call, it sets the **RingInd** signal and sends the ASCII "RING" or "+CRING: <type>" string to the application (+CRING if the cellular result code +CRC is enabled). Then it waits for the application to accept the call with the ATA command.

4.3.2 Syntax :

Command syntax : ATA

Command	Possible responses
	RING

	<i>Note : Incoming call</i>
ATA <i>Note : Answer to this incoming call</i>	+WANS +WCNT: 10 <i>Note : Call accepted</i>
ATH <i>Note : Disconnect call</i>	OK +WEND: 10 <i>Note : Call disconnected</i>

4.4 Remote disconnection

This message is used by the product to inform the application that an active call has been released by the remote user.

The product sends +WEND:<result code> to the application. The DCD signal may be set based upon the AT&C2 setting for packet calls.

4.5 Extended error report +CEER

4.5.1 Description :

This command gives the cause of any general call processing error or malfunction. See section 14.4.

Syntax :

Command syntax : AT+CEER

Command	Possible responses
ATD18005551212;	OK +WORG:18005551212 +WCNT:3
ATD1234567; <i>Note : Outgoing voice call while already in a call</i>	ERROR <i>Note : Call setup failure</i>
AT+CEER	+CEER: Error 2 OK <i>Note: Operation not allowed when call in progress</i>
AT+CEER <i>Note : Ask for reason of release</i>	+CEER : Error <x> OK <i>Note : <x>is the cause information element values</i>

4.6 DTMF signals +VTD, +VTS

4.6.1 +VTD Description :

The product enables the user application to send DTMF tones over the CDMA network. This command is used to define tone duration (the default value is 150,255ms).

To define this duration, the application uses:

AT+VTD=<n1>,<n2> where <n1> gives the on duration in ms and <n2> gives the off duration.

4.6.2 +VTD Syntax :

Command syntax : AT+VTD=<n>,<n>

Command	Possible responses
AT+VTD=150,255 <i>Note : To define 150 ms off tone duration and 255 ms on tone duration.</i>	OK <i>Note : Command valid</i>
AT+VTD=?	VTD: (60,200), (95-350) OK

4.6.3 +VTS Description :

The product enables the user application to send DTMF tones over the CDMA network. This command enables tones to be transmitted.

To transmit DTMF tones (only when there is an active call), the application uses:

AT+VTS=<Tone> where <Tone> is in {0-9,*,#,A,B,C,D}

4.6.4 +VTS Syntax :

Command syntax : AT+VTS=<Tone>

Command	Possible responses
AT+VTS=A	OK <i>Note : Command valid</i>
AT+VTS=11	OK
AT+VTS=4	OK

4.6.5 Informative example :

To send tone sequence 13#, the application sends :

AT+VTS=13#

4.7 Redial last telephone number ATDL

4.7.1 Description :

This command is used by the application to redial the last number used in the ATD command. The last number dialed is displayed.

4.7.2 Syntax :

Command syntax : ATDL

Command	Possible responses
ATDL <i>Note : Redial last number</i>	+WORG: 8585551212 OK <i>Note : Last call was a voice call. Command valid</i>

4.8 Automatic dialing with DTR AT%Dn

4.8.1 Description :

This command enables and disables:

- automatic sending of the short message (SMS) stored in the first location.

The number is dialed and then short message is sent when DTR OFF switches ON.

Syntax :

Command syntax : AT%D<n>

Command	Possible responses
AT%D2 <i>Note : Activates DTR short message sending</i>	OK <i>Note : Command has been executed</i>

4.8.2 Defined values :

<n> (0-2)

to enable or disable automatic message transmission or number dialling.

Informs the product that the number is a voice rather than a fax or data number.

AT%D0

Disables automatic DTR number dialling / message transmission.

AT%D1

Currently not implemented.

AT%D2

Activates automatic DTR message transmission if DTR switches from OFF to ON.

4.9 Automatic answer ATSO

4.9.1 Description :

This S0(zero) parameter determines and controls the product automatic answering mode.

4.9.2 Syntax :

Command syntax : ATSO=<value>

Command	Possible responses
ATSO=2 <i>Note : Automatic answer after 2 rings</i>	OK
ATSO? <i>Note : Current value</i>	002 OK <i>Note : always 3 characters padded with zeros</i>
ATSO=0 <i>Note : No automatic answer</i>	OK <i>Note : Command valid</i>

All others S-parameters (S6,S7,S8 ...) are not implemented.

4.10 Incoming Call Bearer +CICB

4.10.1 Description :

This **specific** command is used to set the type of incoming calls when no incoming bearer is given (see +CSNS).

Note:

setting the +CICB command affects the current value of +CSNS.

4.10.2 Syntax :

Command syntax : AT+CICB=<mode>

Command	Possible responses
AT+CICB=1 <i>Note : If no incoming bearer, force a fax call</i>	OK <i>Note : Command accepted</i>
AT+CICB=2 <i>Note : If no incoming bearer, force a voice call</i>	OK <i>Note : Command accepted</i>
AT+CICB? <i>Note : Interrogate value</i>	+CICB: 2 <i>Note : Default incoming bearer: voice call</i>
AT+CICB=? <i>Note : Test command</i>	+CICB: (0-4) <i>Note : Speech, data or fax default incoming bearer</i>

4.10.3 Defined values :

<mode>

0 : Data

1 : Fax

2 : Speech

3: Data once (10 minute timeout)

4: Fax once (10 minute timeout)

4.11 Single Numbering Scheme +CSNS

4.11.1 Description :

This command selects the bearer to be used when an MT single numbering scheme call is set up (see +CICB, these commands are the same).

Note:

setting the +CSNS command affects the current value of +CICB.

4.11.2 Syntax :

Command syntax : AT+CSNS

Command	Possible responses
AT+CSNS=2 <i>Note : force a fax call</i>	OK <i>Note : Command accepted</i>
AT+CSNS=0 <i>Note : force a voice call</i>	OK <i>Note : Command accepted</i>
AT+CSNS? <i>Note : Interrogate value</i>	+CSNS: 0 <i>Note : Default incoming bearer: voice call</i>
AT+CSNS=? <i>Note : Test command</i>	+CSNS: (0,2,4) <i>Note : Voice, data or fax default incoming bearer</i>

4.11.3 Defined values :

<mode>

0 : Voice

2 : Fax

4 : Data

4.12 Volume Gain control +VGR

4.12.1 Description :

This command is used by the application to tune the receive gain of the speaker.

4.12.2 Syntax :

Command syntax : AT+VGR=<Rgain>

Command	Possible responses
AT+VGR=2	OK <i>Note : Command valid</i>
AT+VGR? <i>Note : Interrogate value</i>	+VGR: 64 <i>Note : Default receive gain</i>
AT+VGR=? <i>Note : Test command</i>	+VGR : (0-10) <i>Note : Possible values</i>

4.13 Microphone Mute Control +CMUT

4.13.1 Description :

This command is used to mute the microphone input on the product (for the active microphone set with the +SPEAKER command). This command is only allowed during a call.

4.13.2 Syntax :

Command syntax : AT+CMUT=<mode>

Command	Possible responses
AT+CMUT=? <i>Note : Test command</i>	+CMUT : (0,1) OK <i>Note : Enable / disable mute</i>
AT+CMUT? <i>Note : Ask for current value</i>	+CMUT : 0 OK <i>Note : Current value is OFF</i>
AT+CMUT=1 <i>Note : Mute ON (call active)</i>	OK <i>Note : Command valid</i>
AT+CMUT? <i>Note : Ask for current value</i>	+CMUT : 1 OK <i>Note : Mute is active (call active)</i>
AT+CMUT=0 <i>Note : Mute OFF (call not active)</i>	+CME ERROR:3 <i>Note : Command not valid</i>

4.13.3 Defined values :

<mode>

0 : microphone mute off (default value).

1 : microphone mute on.

4.14 Speaker & Microphone selection +SPEAKER

4.14.1 Description

This command is used to select the speaker and the microphone set.

4.14.2 Syntax :

Command syntax : AT+SPEAKER=<ActiveSpkMic>

Command	Possible responses
AT+SPEAKER=0 <i>Note : Speaker ONE and Micro ONE</i>	OK <i>Note : Command valid</i>
AT+SPEAKER? <i>Note : Speaker ONE and Micro ONE are active</i>	+SPEAKER: 0 OK

4.14.3 Defined values :

<mode>
 0 : HANDSET
 1 : HEADSET

4.15 Echo Cancellation +ECHO

4.15.1 Description :

This command is used to enable, disable or configure the Echo Cancellation functions for voice calls (in rooms, in cars, etc.). The +SPEAKER function automatically sets echo cancellation based upon handset or headset choice and this command allows non-standard operation.

4.15.2 Syntax :

Command syntax :
 AT+ECHO= <mode>

Command	Possible responses
AT+CMEE=1 <i>Note: Enables the use of result code</i>	OK
AT+SPEAKER?	+ SPEAKER: 0 OK <i>Note : Handset path is active</i>
AT+SIDET=0 <i>Note: Deactivate the Sidetone</i>	OK
AT+SIDET?	+SIDET: 0,0
AT+ECHO? <i>Note : Read current settings</i>	+ECHO: 0 OK

4.15.3 Defined values:

<mode>
 0 :Vocoder Echo Cancellation Off
 1 : Ear Seal Echo Cancellation
 2 : Head Set Echo Cancellation
 3 : AEC
 4 : Speaker Echo Cancellation for car kit operation
 5 : Default Echo Cancellation for current path settings

4.16 SideTone modification +SIDET

4.16.1 Description :

This **specific** command is used to set the level of audio feedback in the speaker (microphone feedback in the speaker).

4.16.2 Syntax:

Command syntax : AT+SIDET=<val1>,<val2>

Command	Possible responses
AT+SIDET=1,0	OK <i>Note : Command valid</i>
AT+SIDET? <i>Note : Current value</i>	+SIDET: 1,0 OK <i>Note : Command valid</i>

4.16.3 Defined values :**<val1>****0:** SideTone is disabled**1:** SideTone is enabled**<val2>****0:** No side tone**1:** Handset Sidetone levels**2:** Headset Sidetone levels**3:** Max Sidetone level

5 Network service commands

5.1 Signal Quality +CSQ

5.1.1 Description :

This command is used to ascertain the *received signal strength indication* (<rssi>) and the *channel frame error rate* (<fer>).

5.1.2 Syntax :

Command syntax : AT+CSQ

Command	Possible responses
AT+CSQ	+CSQ: <rssi>,<fer> OK <i>Note : <rssi> and <ber> as defined below</i>

5.1.3 Defined values :

<rssi> : 0-31 valid value ranges. Exact meaning of the SQM(RSSI) shall be manufacturer defined. The lowest defined value is 0 and the highest is 31.

<fer> :

99: not known or not detectable Currently always returns 99.

5.2 Mode Preference +COPS

5.2.1 Description :

The Mode Preference of a CDMA module governs the basic system acquisition behavior of the MS in conjunction with the PRL (Preferring Roaming List). It's important to note that the PRL takes precedence over mode preference when guiding the phone to a band or system. The PRL must allow a particular band first, before the mode preference can take effect. In other words, a mode preference change is simple a request, the PRL decides whether or not to allow it. After execution of the +COPS command, an unsolicited +COPS:<mode> will follow soon. See section 15.6 Unsolicited result codes.

5.2.2 Syntax :

The application must send the following command:

Command syntax: AT+COPS=<mode>

Command	Possible responses
AT+COPS? <i>Note : Ask for current Mode Preference</i>	+COPS: 0 OK

	<i>Note : Automatic mode, use PRL order</i>
AT+COPS=?	+COPS: (0-2) OK <i>Note: Automatic, PCS, Cellular</i>
AT+COPS=0 <i>Note : Ask for Automatic mode</i>	OK +COPS:0 <i>Note: Unsolicited +COPS result confirms Automatic mode is requested</i>
AT+COPS=1 <i>Note : Ask for PCS mode</i>	OK +COPS:1 <i>Note: Unsolicited +COPS result confirms PCS mode is requested</i>
AT+COPS=2 <i>Note : Ask for Cellular mode</i>	OK +COPS:2 <i>Note : Unsolicited +COPS result confirms Cellular mode is requested</i>

5.2.3 Defined values :

The parameters values are the following ones:

<mode>

0: Automatic, follow PRL (**default** value)

1: Automatic in PCS frequencies (1900Mhz only)

2: Automatic in Cellular frequencies (800Mhz only)

5.3 Roam Preference +WRMP

5.3.1 Description :

The Roam Preference of a CDMA module informs the MS whether it is allowed to roam on foreign CDMA networks or only allow operation on home networks. The determination of what is a foreign or home network is programmed into the PRL (Preferring Roaming List). This command simply enables or disables the capability of the MS to roam, based on the PRL configuration.

After execution of the +WRMP command, the MS may change roaming states. The unsolicited result +WROM:<mode> will indicate the new state. See section 15.6 Unsolicited result codes.

5.3.2 Syntax :

The application must send the following command:

Command syntax: AT+WRMP=<mode>

Command	Possible responses
AT+WRMP? <i>Note : Ask for current Mode Preference</i>	+WRMP: 0 OK <i>Note : Home only</i>
AT+WRMP=?	+WRMP: (0-2) OK <i>Note: Home, Affiliated, Any</i>
AT+WRMP=0 <i>Note : Allow Home only networks</i>	OK . .

	. +WROM:0 <i>Note: Unsolicited +WROM may or may not appear based on current circumstances</i>
AT+WRMP=1 <i>Note : Allow Roaming Affiliated Networks</i>	OK . . . +WROM:1 <i>Note: Unsolicited +WROM may or may not appear based on current circumstances</i>
AT+WRMP=2 <i>Note : Allow Roaming on Any Network</i>	OK . . . +WRMP:2 <i>Note: Unsolicited +WROM may or may not appear based on current circumstances</i>

5.3.3 Defined values :

The parameters values are the following ones:

<mode>

0: Home Networks only, as defined in the PRL (**default** value)

1: Roaming on Affiliated networks, as defined in the PRL

2: Roaming on Any Network, as defined in the PRL.

5.4 Network registration & roaming +CREG

5.4.1 Description

This command is used by the application to ascertain the registration and roaming status of the product. Note: Also see +WROM unsolicited command for CDMA roaming status.

5.4.2 Syntax :

Command syntax : AT+CREG= <mode>

Response syntax : +CREG : <mode>, <stat>

Command	Possible responses
AT+CREG=0 <i>Note : Disable network registration unsolicited result code</i>	+CREG: 0,1 OK <i>Note : Command valid</i>
AT+CREG=1 <i>Note : Enable network registration unsolicited result code</i>	+CREG:1,1 OK <i>Note : Command valid</i>
AT+CREG?	+CREG: 1,5 OK <i>Note : Unsolicited enabled, MS currently roaming.</i>
AT+CREG=?	+CREG: (0-1) <i>Note : 0,1 <mode> values are supported</i>

Example of the unsolicited result code. MS is searching for a base station	+CREG:2
--	---------

5.4.3 Defined values :

<mode>

- 0: Disable network registration unsolicited result code (**default**)
- 1: Enable network registration unsolicited code result code +CREG : <stat>

<stat>

- 0: not registered, MS is not currently searching for a new operator.
- 1: registered, home network.
- 2: not registered, MS currently searching for a base station.
- 4: unknown.
- 5: registered, roaming

5.5 Change NAM Selection +WNAM

5.5.1 Description :

This command is used to request a change in the NAM (Number Assignment Module) selection. The module supports up to 4 NAMs. However, if a NAM is not full programmed, the module will not switch to the requested NAM. The default NAM for the module is 1. The response to this command is only OK, and this is no guarantee that the NAM will change. If the NAM selection request is accepted, the unsolicited command +WNAM: <nam> will be returned. If or when the actual NAM changes, the unsolicited command +WCNM: <nam> will be returned. See section 13, unsolicited result codes.

5.5.2 Syntax :

Command syntax: AT+WNAM=<nam>
 Response syntax: OK

Command	Possible responses
AT+WNAM=2 <i>Note : Use NAM 2, if programmed</i>	OK +WNAM: 2 +WCNM: 2
AT+WNAM=3 <i>Note :</i>	OK <i>Note : No unsolicited response indicates that NAM 3 is not valid, thus no change in NAM.</i>
AT+WNAM=5 <i>Note : Try Auto NAM</i>	OK +WNAM: 5 +WCNM: 1 <i>Note : Auto NAM is selected, NAM 1 chosen.</i>

5.5.3 Defined values :

<nam>

- 1: NAM 1
- 2: NAM 2
- 3: NAM 3

4: NAM 4

5: Auto NAM

5.6 Read Current NAM +WCNM

5.6.1 Description :

This command is used to read the current NAM (Number Assignment Module). The module supports up to 4 NAMs. Also, note that there exist an unsolicited command +WCNM: <nam> that is returned any time the NAM changes. See section 13, unsolicited result codes.

5.6.2 Syntax :

Command syntax : AT+WCNM

Command	Possible responses
AT+WCNM	+WCNM: 1 OK
<i>Note : Ask for the current NAM</i>	<i>Note : NAM 1 in use</i>

6 Short Messages commands

6.1 Parameters definition

<da>	Destination Address
<dcs>	Data Coding Scheme, coded like in document [5].
<dt>	Discharge Time in string format : “yy/MM/dd, hh :mm :ss”(Year [00-99], Month [01-12], Day [01-31], Hour, Minute, Second
<fo>	First Octet, coded like SMS-SUBMIT first octet in document [4], default value is 17 for SMS-SUBMIT
<index>	Place of storage in memory.
<length>	Text mode (+CMGF=1): number of characters PDU mode (+CMGF=0): length of the TP data unit in octets
<mem1>	Memory used to list, read and delete messages (+CMGL, +CMGR and +CMGD).
<mem2>	Memory used to write and send messages (+CMGW, +CMSS).
<mid>	CBM Message Identifier.
<mr>	Message Reference.
<oa>	Originator Address.
<pid>	Protocol Identifier.
<pdu>	For SMS : address followed by TPDU in hexadecimal format, coded as specified in doc [4] For CBS : GSM 03.41 TPDU in hexadecimal format
<ra>	Recipient Address.
<sca>	Service Center Address
<scts>	Service Center Time Stamp in string format : “yy/MM/dd, hh :mm :ss” (Year/Month/Day, Hour:Min:Seconds)
<sn>	CBM Serial Number
<st>	Status of a SMS-STATUS-REPORT
<stat>	Status of message in memory.
<tooa>	Type-of-Address of <oa>.
<tora>	Type-of-Address of <ra>.
<tosca>	Type-of-Address of <sca>.
<total1>	Number of message locations in <mem1>.
<total2>	Number of messages locations in <mem2>.
<used1>	Total number of messages locations in <mem1>.
<used2>	Total number of messages locations in <mem2>.
<vp>	Validity Period of the short message, default value is 167

6.2 Select message service +CSMS

6.2.1 Description :

The supported services are originated (SMS-MO) and terminated short message (SMS-MT) + Cell Broadcast Message (SMS-CB) services.

6.2.2 Syntax :

Command syntax : AT+CSMS?

Command	Possible responses
AT+CSMS?	+CSMS: <MO>,<MT>,<CB> OK
<i>Note : Current values ?</i>	<i>Note : SMS-MO, SMS-MT and SMS-CB support</i>

6.2.3 Defined values :

<MO>

0: Mobile Originated SMS not supported.

1: Mobile Originated SMS supported.

<MT>

0: Mobile Terminated SMS not supported.

1: Mobile Terminated SMS supported.

<CB>

0: Broadcast SMS not supported.

1: Broadcast SMS supported.

6.3 New Message Acknowledgement +CNMA

6.3.1 Description :

This command allows reception of a new message routed directly to the TE to be acknowledged.

In TEXT mode, only positive acknowledgement to the network (RP-ACK) is possible.

In PDU mode, either positive (RP-ACK) or negative (RP-ERROR) acknowledgement to the network is possible.

Acknowledge with +CNMA is possible only when a +CMT or +CDS indication is shown (see +CNMI command).

6.3.2 Syntax :

Command syntax in text mode :

AT+CNMA

Command syntax in PDU mode :

AT+CNMA [= <n> [, <length> [<CR>

PDU is entered <ctrl-Z / ESC>]]]

Note:

PDU is entered using <ackpdu> format instead of <pdu> format (e.g.. SMSC address field is not present).

Example of acknowledgement of a new message in TEXT mode

Command	Possible responses
AT+CMGF=1 <i>Note : Set TEXT mode</i>	OK <i>Note : TEXT mode valid</i>
AT+CNMI=2,2,0,0,0 <i>Note : <mt>=2</i>	OK
	+CMT:"8587351530","02/04/03,11 :06 :38",129,7<CR><LF> Testing <i>Note : message received</i>
AT+CNMA <i>Note : acknowledge the message received</i>	OK <i>Note : send positive acknowledgement to the network</i>

AT+CNMA <i>Note : try to acknowledge again</i>	+CMS ERROR : 340 <i>Note : no +CNMA acknowledgment expected</i>
---	--

Example of acknowledgement of a new message in PDU mode:

Command	Possible responses
AT+CMGF=0 <i>Note : Set PDU mode</i>	OK <i>Note : PDU mode valid</i>
	+CMT: ,29 07913366003000F1240B913366920547F300000030 03419404800B506215D42ECFE7E17319 <i>Note : message received</i>
AT+CNMA=2,<length> <CR> ... Pdu message ... <Ctrl-Z/ESC> <i>Note : negative acknowledgement for the message.</i>	OK <i>Note : send a negative acknowledgement to the network (RP-ERROR) with PDU message (<ackpdu> format).</i>

6.3.3 Defined values :

<n> : Type of acknowledgement in PDU mode
 0: send RP-ACK without PDU (same as TEXT mode)
 1: send RP-ACK with optional PDU message
 2: send RP-ERROR with optional PDU message
 <length>: Length of the PDU message

6.4 Preferred Message Storage +CPMS

6.4.1 Description :

This command allows the message storage area to be selected (for reading, writing, etc).

6.4.2 Syntax :

Command syntax : AT+CPMS=<mem1>,[<mem2>]

Command	Possible responses
AT+CPMS=? <i>Note : Possible message storages</i>	+CPMS: ("MT","BC","SR"),("MO") OK <i>Note : Read, list, delete: SMS, CBM or SMS Status Report Write, send: SMS</i>
AT+CPMS? <i>Note : Read</i>	+CPMS: "MT",3,10,"MO",3,10 OK
AT+CPMS="AM" <i>Note : Select false message storage</i>	+CMS ERROR: 302
AT+CPMS="BC" <i>Note : Select CBM message storage</i>	OK +CPMS:2,10,3,10 <i>Note : Read, list, delete CBM from NV RAM</i>

6.4.3 Defined values :

<mem1>: Memory used to list, read and delete messages. It can be:

- “MT”: SMS Mobile Terminated message storage in NV (default)
- “BC”: CBM message storage in NV.
- “SR” : Status Report message storage in NV.

<mem2>: Memory used to write and send messages

- “MO” : Mobile Originated SMS message storage.

If the command is correct, the following message indication is sent:

+CPMS: <used1>,<total1>,<used2>,<total2>

When <mem1> is selected, all following +CMGL, +CMGR and +CMGD commands are related to the type of SMS stored in this memory.

6.5 Preferred Message Format +CMGF

6.5.1 Description :

The message formats supported are *text mode* and *PDU mode*.

In PDU mode, a complete SMS Message including all header information is given as a binary string (in hexadecimal format). Therefore, only the following set of characters is allowed:

{‘0’,‘1’,‘2’,‘3’,‘4’,‘5’,‘6’,‘7’,‘8’,‘9’, ‘A’, ‘B’,‘C’,‘D’,‘E’,‘F’}. Each pair of characters is converted to a byte (e.g.: ‘41’ is converted to the ASCII character ‘A’, whose ASCII code is 0x41 or 65).

In Text mode, all commands and responses are in ASCII characters.

6.5.2 Syntax :

Command syntax : AT+CMGF

Command	Possible responses
AT+CMGF ? <i>Note : Current message format</i>	+CMGF: 1 OK <i>Note : Text mode</i>
AT+CMGF=? <i>Note : Possible message format</i>	+CMGF: (0-1) OK <i>Note : Text or PDU modes are available</i>

Example, sending an SMS Message in PDU mode

Command	Possible responses
AT+CMGF=0 <i>Note : Set PDU mode</i>	OK <i>Note : PDU mode valid</i>
AT+CMGS=14<CR> 0001030691214365000004C9E9340B <i>Note : Send complete MSG in PDU mode, no SC address</i>	OK +CMGS: 4 <i>Note : MSG correctly sent, <mr> is returned</i>

6.5.3 Defined values :

The <pdu> message is composed of the SC address (« 00 means no SC address given) and the TPDU message.

NOTE: CDMA does not support changing of the Service Center Address. Only 0x00 is allowed for the SC byte. CDMA status reports do not generate a message field. So, <length> of status reports will always be zero and <pdu> will be empty.

In this example, the length of **octets** of the TPDU buffer is 14.
 In this case the TPDU is : 0x01 0x03 0x06 0x91 0x21 0x43 0x65 0x00 0x00 0x04 0xC9 0xE9 0x34 0x0B:

```

<fo>                0x01 (SMS-SUBMIT, no validity period)
<mr> (TP-MR)        0x03 (Message Reference)
<da> (TP-DA)        0x06 0x91 0x21 0x43 0x65 (destination address +123456)
<pid> (TP-PID)      0x00 (Protocol Identifier)
<dcs> (TP-DCS)      0x00 (Data Coding Scheme : 7 bits alphabet)
<length> (TP-UDL)   0x04 (User Data Length, 4 characters of text)
TP-UD                0xC9 0xE9 0x34 0x0B (User Data : ISSY)
    
```

TPDU in hexadecimal format must be converted into two ASCII characters, e.g. octet with hexadecimal value 0x2A is presented to the MS as two characters '2' (ASCII 50) and 'A' (ASCII 65).

6.6 Show text mode parameters +CSDH

6.6.1 Description :

This command gives additional information on text mode result codes. This information is given in brackets in the +CMTI, +CMT, +CDS, +CMGR, +CMGL commands.

6.6.2 Syntax :

Command syntax : AT+CSDH

Command	Possible responses
AT+CSDH? <i>Note : Current value</i>	+CSDH: 0 OK <i>Note : Do not show header values</i>

6.7 New message indication +CNMI

6.7.1 Description :

This command selects the procedure for message reception from the network.

6.7.2 Syntax :

Command syntax : AT+CNMI=<mode>,<mt>,<bm>,<ds>,<bfr>

Command	Possible responses
AT+CNMI=2,1,0,0,0 <i>Note : <mt>=1</i>	OK
	AT+CMTI : "MT",1 <i>Note : message received</i>
AT+CNMI=2,2,0,0,0 <i>Note : <mt>=2</i>	OK
	+CMT : "8585551212","98/10/01,12 :30 00",129,5<CR><LF> Hello <i>Note : message received</i>
AT+CNMI=2,0,0,1,0 <i>Note : <ds>=1</i>	OK
AT+CMGS="8585551212"<CR> Message to send <ctrl-Z> <i>Note : Send a message in text mode</i>	OK +CMGS : 7 <i>Note : Successful transmission</i>
	+CDS : 2, 116, "8585551212", 129, "98/10/01,12 :30 :07", "98/10/01 12 :30 :08", 0 <i>Note : message was correctly delivered</i>

6.7.3 Defined values :

<mode> : controls the processing of unsolicited result codes

Only <mode>=2 is supported.

Any other value for <mode> (0,1 or 3) is accepted (return code will be OK), but the processing of unsolicited result codes will be the same as with<mode>=2.

<mode>

- 0:** Buffer unsolicited result codes in the TA. If TA result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications
- 1:** Discard indication and reject new received message unsolicited result codes when TA-TE link is reserved. Otherwise forward them directly to the TE
- 2:** Buffer unsolicited result codes in the TA when TA-TE link is reserved and flush them to the TE after reservation. Otherwise forward them directly to the TE
- 3:** Forward unsolicited result codes directly to the TE. TA-TE link specific inband used to embed result codes and data when TA is in on-line data mode

<mt> : sets the result code indication routing for SMS-DELIVERs. Default is 2.

<mt>

0: No SMS-DELIVER indications are routed.

1: SMS-DELIVERs are routed using unsolicited code : +CMTI: "MT", <index>

2: SMS-DELIVERs (except class 2 messages) are routed using unsolicited code : +CMT : [<alpha>,<length> <CR> <LF> <pdu> (PDU mode) or +CMT : <oa>,<alpha>,<length> <CR><LF><data> (text mode)

<bm> : sets the the result code indication routing for received CBMs (Cell Broadcast Message) Default is 2.

<bm>

0: No CBM indications are routed to the TE. The CBMs are stored.

1: The CBM is stored and an indication of the memory location is routed to the customer application using unsolicited result code: +CBMI: "BC", <index>

2: New CBMs are routed directly to the TE using unsolicited result code (format matches that of +CMT since CDMA treats them very much the same way). +CBM : [<alpha>,<length> <CR> <LF> <pdu> (PDU mode) or +CBM : <oa>,<alpha>,<length> <CR><LF><data> (text mode)

<ds> for SMS-STATUS-REPORTs. Default is 1.

<ds>

0: No SMS-STATUS-REPORTs are routed.

1: SMS-STATUS-REPORTs are routed using unsolicited code : +CDS : <length> <CR> <LF> <pdu> (PDU mode) or +CDS : <fo>,<mr> , [<ra>] , [<tora>] , <scts>,<dt>,<st> (Text mode)

2: SMS-STATUS-REPORTs are stored and routed using the unsolicited result code : +CDSI: "SR",<index>

<bfr> Default is 0.

<bfr>

0: TA buffer of unsolicited result codes defined within this command is flushed to the TE when <mode> 1...3 is entered (OK response shall be given before flushing the codes)

1: TA buffer of unsolicited result codes defined within this command is cleared when <mode> 1...3 is entered.

6.8 Read message +CMGR

6.8.1 Description :

This command allows the application to read stored messages. The messages are read from the memory selected by +CPMS command.

6.8.2 Syntax :

Command syntax : AT+CMGR=<index>

Response syntax for text mode:

+CMGR : <stat>, <oa>, [<alpha>], <scts> [, <toa>, <fo>, <pid>, <dcsc>, <sca>, <tosca>, <length>] <CR><LF> <data> (for **SMS-DELIVER** only)

+CMGR : <stat>, <da>, [<alpha>], <dt>[, <tda>, <fo>, <pid>, <dcsc>, [<vp>], <sca>, <tosca>, <length>] <CR><LF> <data> (for **SMS-SUBMIT** only)

+CMGR : <stat>, <mr>, [<ra>], [<tora>], <scts>, <dt>, <st> (for **SMS-STATUS-REPORT** only)

Response syntax for PDU mode :

+CMGR: <stat>, [<alpha>], <length> <CR><LF> <pdu>

A message read with status "REC UNREAD" will be updated in memory with the status "REC READ".

Note :

the <stat> parameter for SMS Status Reports is always "READ".

Example :

Command	Possible responses
	AT+CMTI: "MT",1 <i>Note : New message received</i>
AT+CMGR=1 <i>Note : Read the message</i>	OK +CMGR: "REC UNREAD",8585551212", "98/10/01,18 :22 :11+00",<CR><LF> ABCdefGHI
AT+CMGR=1 <i>Note : Read the message again</i>	OK +CMGR: "REC READ",8585551212", "98/10/01,18 :22 :11",<CR><LF> ABCdefGHI <i>Note : Message is read now</i>
AT+CMGR=2 <i>Note : Read at a wrong index</i>	+CMS ERROR: 321 <i>Note : Error : invalid index</i>
AT+CMGF=0 ;+CMGR=1 <i>Note : In PDU mode</i>	OK +CMGR: 2,,<length> <CR><LF><pdu> <i>Note : Message is stored but unsent, no <alpha>field</i>
AT+CMGF=1;+CPMS="SR";+CNMI=,,,2 <i>Reset to text mode, set read memory to "SR", and allow storage of further SMS Status Report into "SR" memory</i>	OK
AT+CMSS=3 <i>Send an SMS previously stored</i>	OK +CMSS: 160
	+CDSI: "SR",1 <i>New SMS Status Report stored in "SR" memory at index 1</i>
AT+CMGR=1 <i>Read the SMS Status Report</i>	OK +CMGR: "READ",160, "8585551212",129,"01/05/31,15:15:09", "01/05/31,15:15:09",0

6.9 List message +CMGL

6.9.1 Description :

This command allows the application to read stored messages, by indicating the type of the message to read. The messages are read from the memory selected by the **+CPMS** command.

6.9.2 Syntax :

Command syntax : AT+CMGL=<stat>

Response syntax for text mode:

+CMGL : <index>,<stat>,<da/oa>[,<alpha>], [<scts>, <tooa/toda>, <length>] <CR><LF><data> (for **SMS-DELIVER** and **SMS-SUBMIT**, may be followed by other <CR><LF>+CMGL:<index>...)

+CMGL : <index>,<stat>,<fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st> (for **SMS-STATUS-REPORT** only, may be followed by other <CR><LF>+CMGL:<index>...)

Response syntax for PDU mode :

+CMGL : <index>,<stat>, [<alpha>], <length> <CR><LF> <pdu> (for **SMS-DELIVER**, **SMS-SUBMIT** and **SMS-STATUS-REPORT**, may be followed by other <CR><LF>+CMGL:<index>...)

Command	Possible responses
AT+CMGL="UREAD" <i>Note : List unread messages in text mode</i>	OK +CMGL: 1,"REC UNREAD","8585551212", <CR><LF> Unread message ! +CMGL: 3,"REC UNREAD", "8585551212", <CR><LF> <i>Another message unread!</i> <i>Note : 2 messages are unread, these messages will then have their status changed to "REC READ" (+CSDH:0)</i>
AT+CMGL="READ" <i>Note : List read messages in text mode</i>	OK +CMGL: 2,"REC READ", "8585551212", <CR><LF> Keep cool
AT+CMGL="SENT" <i>Note : List stored and sent messages in text mode</i>	OK <i>Note : No message found</i>
AT+CMGL=1 <i>Note : List read messages in PDU mode</i>	OK +CMGL: 1,1,,26<CR><LF> 07913366003000F3040B913366920547F400130011 90412530400741AA8E5A9C5201

6.9.3 Defined values

<stat> possible values (status of messages in memory) :

Text mode possible values	PDU mode possible values	Status of messages in memory
“UREAD”	0	received unread messages
“READ”	1	received read messages
“USENT”	2	stored unsent messages
“SENT”	3	stored sent messages
“ALL”	4	all messages

Note :

For SMS Status Reports, only “ALL” / 4 and “READ” / 1 values of the <stat> parameter will list messages ; other values will only return OK.

6.10 Send message +CMGS

6.10.1 Description :

The <address> field is the address of the terminal to which the message is sent. To send the message, simply type, <ctrl-Z> character (ASCII 26). The text can contain all existing characters except <ctrl-Z> and <ESC> (ASCII 27).

This command can be aborted using the <ESC> character when entering text.

In PDU mode, only hexadecimal characters are used ('0'...'9','A'...'F').

6.10.2 Syntax :

Command syntax in text mode :

AT+CMGS= <da> [,<toda>] <CR>

text is entered <ctrl-Z / ESC >

Command syntax in PDU mode :

AT+CMGS= <length> <CR>

PDU is entered <ctrl-Z / ESC >

Command	Possible responses
AT+CMGS="8585551212"<CR> Please call me soon, Fred. <ctrl-Z> <i>Note : Send a message in text mode</i>	OK +CMGS:<mr>
AT+CMGS=<length><CR><pdu><ctrl-Z> <i>Note : Send a message in PDU mode</i>	OK +CMGS:<mr>

6.11 Write Message to Memory +CMGW

6.11.1 Description :

This command stores a message in memory (either SMS-SUBMIT or SMS-DELIVERS). The memory location <index> is returned (no choice possible as with phonebooks +CPBW). Text or PDU is entered as described for the Send Message +CMGS command.

6.11.2 Syntax :

Command syntax in text mode : (<index> is returned in both cases)

AT+CMGW= <oa/da> [,<tooa/toda>] <CR>

enter text <ctrl-Z / ESC>

Command syntax in PDU mode :

AT+CMGW= <length> <CR>

give PDU <ctrl-Z / ESC>

Response syntax:

+CMGW: <index> or +CMS ERROR: <err> if writing fails

Command	Possible responses
AT+CMGW="8585551212"<CR> Hello how are you ?<ctrl-Z> <i>Note : Write a message in text mode</i>	OK +CMGW: 4 <i>Note : Message stored in index 4</i>
AT+CMGW=<length><CR><pdu><ctrl-Z> <i>Note : Write a message in PDU mode</i>	OK +CMGW: <index> <i>Note : Message stored in <index></i>

6.11.3 Defined values :

Parameter Definition :

<oa/da> : Originating or Destination Address Value in string format.

<tooa/toda> : Type of Originating / Destination Address.

<length> : Length of the actual data unit in octets

6.12 Send Message From Storage +CMSS

6.12.1 Description :

This command sends a message stored at location value <index>.

6.12.2 Syntax :

Command syntax: AT+CMSS=<index>[,<da> [,<toda>]]

Response syntax:

+CMSS : <mr> or +CMS ERROR: <err> if sending fails

If a new recipient address <da> is given, it will be used instead of the one stored with the message

Command	Possible responses
AT+CMSS="8585551212"<CR> Today is my birthday	OK +CMSS : 5

<i>Note :</i> AT+CMSS=5,8582221212 <i>Note : Send the message 5 to a different destination number</i>	<i>Note :Message stored with index 5</i> OK AT+CMSS :<mr> <i>Note : Successful transmission</i>
AT+CMSS=5,8583331212 <i>Note : Send the message 5 to a different destination number</i>	OK +CMSS :<mr> <i>Note : Successful transmission</i>

6.13 Delete message +CMGD

6.13.1 Description :

This command is used to delete one or several messages from preferred message storage.

6.13.2 Syntax :

Command syntax : AT+CMGD=<Index> [,<DelFalg>]

Command	Possible responses
	+CMTI:"MT",3 <i>Note : New message received</i>
AT+CMGR=3 <i>Note : Read it</i>	OK +CMGR: "REC UNREAD",8585551212", "98/10/01,18 :19 :20" <CR><LF> Message received! <i>Note : Unread message received from 8585551212 on the 01/10/1998 at 18H19m 20s</i>
AT+CMGD=3 <i>Note : Delete it</i>	OK <i>Note : Message deleted</i>
AT+CMGD=1,0	OK <i>Note : The message from the preferred message storage at the location 1 is deleted</i>
AT+CMGD=1,1	OK <i>Note : All READ messages from the preferred message storage are deleted</i>
AT+CMGD=1,2	OK +CMS ERROR:341 <i>Note : NV Error deleting READ messages and SENT</i>
AT+CMGD=1,3	OK <i>Note : All READ, SENT and UNSENT messages are deleted</i>
AT+CMGD=1,4	OK <i>Note : All messages are deleted</i>

6.13.3 Defines values

<index>

0-9

When the preferred message storage is "BC". Integer type values in the range of location numbers of Message memory when the preferred message storage is "MT" or "SR".

<DelFlag>

- 0 Delete message at location <index>
- 1 Delete All READ messages
- 2 Delete All READ and SENT messages
- 3 Delete All READ, SENT and UNSENT messages
- 4 Delete All messages.

Note :

when the preferred message storage is "SR", as SMS status reports are assumed to have a "READ" status, if <DelFlag> is greater than 0, all SMS status reports will be deleted.

6.14 Message status modification +WMS

6.14.1 Syntax :

Command syntax : AT+WMS=<loc>, <status>

<loc> location number of the stored message (integer)

<status> new status to be stored, as for +CMGL command :

PDU Mode	Text Mode
0	"UREAD"
1	"READ"
2	"USENT"
3	"SENT"

Possible responses:

- OK location is valid and has been changed
- +CMS ERROR: 341 Non-volatile memory error
- +CMS ERROR: 321 Invalid index (out of range or no SMS stored)
- +CMS ERROR: 302 if attempting to change Status Report SMS or if syntax is incorrect

Note:

Status of SENT or USENT indicate changing MO memory SMS. Status of READ or UREAD imply using preferred memory. Changes are not accepted when preferred memory is set to Status Report (all status reports are always assumed to be READ and cannot be changed).

Command	Possible responses
AT+WMS=4,"UREAD"	OK <i>Note : Message stored in preferred memory index 4 status changed to NOT READ</i>
AT+WMS=8,"USENT"	OK +CMS ERROR: 321 <i>Note : Invalid index, no message at location 8 of MO memory</i>
AT+CPMS="SR"	OK
<i>Note: Change preferred memory to Status Report</i>	+CPMS:1,10,4,10
AT+WMS=0,"UREAD"	OK +CMS ERROR: 302 <i>Note : Cannot change Status Report messages</i>

6.15 Message overwriting +WMGO

6.15.1 Description :

The +CMGW command writes an SMS to the first location available. To write an SMS to a specified location, the +WMGO **specific** command forces the product to write an SMS (with the +CMGW command) to the location specified with +WMGO, but for just one +CMGW command.

6.15.2 Syntax :

Command syntax : AT+WMGO= <loc>
 <loc> location number of the record to write or overwrite

Command	Possible responses
AT+WMGO=0	OK <i>Note : Next MSG write will be to index 0</i>
AT+WMGO=15	OK +CMS ERROR: 321 <i>Note : Invalid index (out of range)</i>

On the next AT+CMGW command, the record number used will be the one specified by the AT+WMGO command. The location is forgotten and, in order to perform a second overwrite, +WMGO has to be used again.

If the external application specifies a free location, and if an incoming message is received before the AT+CMGW command, the product may store the incoming message at a location available. This could be the one specified by +WMGO (the product does not prevent from this). If the user then issues an AT+CMGW command without changing the AT+WMGO location, the new message will be overwritten!

Note that this location number is not kept over a software reset.

6.16 Unchange SMS Status +WUSS

6.16.1 Description :

The +WUSS command allows to keep the SMS Status to UNREAD after +CMGR or +CMGL.

6.16.2 Syntax :

Command syntax : AT+WUSS = <mode>
 <mode> : 1 The SMS Status will not change.
 <mode> : 0 The SMS Status will change.

Command	Possible responses
AT+WUSS=1	OK
AT+WUSS=0	OK

	+CMS ERROR: 341 <i>Note : Write error</i>
--	---

7 Supplementary Services commands

Supplementary Service commands are specialized call processing commands used to control carrier features on the module such as caller ID, call forwarding, call waiting, 3-way calls, and specialized CDMA test calls.

7.1 Call forwarding +CCFC

7.1.1 Description :

This commands allows control of the call forwarding supplementary service, if supported by the carrier. All calls will be forwarded unconditionally to the phone number specified. The module will actually make a brief call to the CDMA network to set up the call forwarding or cancel it. An audio tone will be produced in the audio path to confirm the change of call forwarding. Please note that that cancelling call forward on some CDMA networks has failed during field testing.

7.1.2 Syntax :

Command syntax :

AT+CCFC= <number>

Response syntax:

OK

Command	Possible responses
AT+CCFC=8585551212 <i>Note : Register to an unconditional call forwarding</i>	OK <i>Note : Command valid</i> <i>Note : Call forwarding active for all incoming calls to phone number 858-555-1212</i>
AT+CCFC=0 <i>Note : Cancel unconditional call forwarding</i>	OK <i>Note : Call forwarding cancelled.</i>

7.1.3 Defined values

<number>

<number> The phone number to forward all calls to.

7.2 Call barring +CLCK

7.2.1 Description :

This command allows control of the call barring supplementary service. Barring Calls or querying the status of call barring is possible for Data and Voice Calls, except Emergency Voice Calls.

7.2.2 Syntax :

Command Syntax : AT+CLCK= <mode>

Response Syntax: +CLCK: <mode>

Command	Possible responses
AT+CLCK=1 <i>Note : Bar Outgoing Calls only</i>	OK <i>Note : Command valid</i>
AT+CLCK? <i>Note : Bar Incoming Calls Only</i>	+CLCK: 2 OK <i>Note : Incoming Calls are Barred</i>
AT+CLCK=0 <i>Note : No Call Barring (Default)</i>	OK <i>Note : Command valid</i>

<mode>

- 0: No Call Barring
- 1: Bar Outgoing Calls only
- 2: Bar Incoming Calls only
- 3: Bar Outgoing and Incoming Calls

7.3 Calling line identification restriction +CLIR

7.3.1 Description :

This command allows control of the outgoing caller ID restriction supplementary service.

7.3.2 Syntax :

Command syntax : AT+CLIR=<mode>

Response syntax : +CLIR :<mode> (for AT+CLIR ?)

Command	Possible responses
AT+CLIR=1 <i>Note :</i>	OK <i>Note : Command valid</i>
AT+CLIR ? <i>Note : Ask for current functionality</i>	+CLIR :<mode> OK <i>Note : <mode> as defined below</i>

7.3.3 Defined values :

<mode>: sets the caller ID restriction for outgoing calls

<mode>

- 0: Outgoing Caller ID works normally, according to the subscription of the Caller ID service.
- 1: Outgoing Caller ID is restricted. The called party will see 'Restricted' on their Caller ID display.

Please note that this command works by automatically prepending a *67 to the outgoing dialing string. Thus, this command will only work on CDMA networks that recognizes a *67 to suppress outgoing caller ID. Also, the original dialing string cannot be longer than 29 characters in length.

7.4 Calling line identification presentation +CLIP

7.4.1 Description :

This command allows control of the incoming caller ID presentation supplementary service. When presentation of the CLI (Calling Line Identification) is enabled (and the carrier allows), +CLIP response is returned after the RING unsolicited result code. By default, +CLIP is enabled.

7.4.2 Syntax :

Command syntax : AT+CLIP=<mode>

Response syntax : +CLIP: <mode> for AT+CLIP?

+CLIP: <number>, <type> for an incoming call, after a RING indication

Command	Possible responses
AT+CLIP=1 <i>Note : Enable CLIP</i>	OK <i>Note : CLIP is enabled</i>
AT+CLIP? <i>Note : Ask for current functionality</i>	+CLIP:<mode> OK <i>Note : <mode> defined as below</i>
	RING <i>Note : Incoming call</i> +CLIP: "8585551212", 129 <i>Note : Incoming call with number presentation</i>
AT+CLIP=0 <i>Note : Disable CLIP presentation</i>	OK <i>Note : Command valid</i>

7.4.3 Defined values :

<mode>: parameter enable or disables the caller ID unsolicited command

<mode>

0: Disable

1: Enable

7.5 Send Flash to Base Station +WFSH

7.5.1 Description :

This command sends a flash or flash with information to the base station. The flash command is used to manage call waiting and 3-way calls. For call waiting situations when the 3rd party call is received, send a flash (AT+WFSH) to toggle between the two different call parties. The +WFSH unsolicited AT command will return if a flash was sent to the base station over the air. Please note that on CDMA networks, this does not guarantee that an actual switch between calls took place, because there is no acknowledgement to the module. For 3-way calls, initiate the first call to party # 1 (see ATD). Then send a flash with information (AT+WFSH=18005551212) to initiate a call to party # 2, party # 1 will automatically be placed on hold. The "information" is the phone number of party # 2. Once a conversation with party # 2 is established, send a regular flash (AT+WFSH) to connect all 3 parties. Send another flash (AT+WFSH) to disconnect party # 2, or End call (see ATH) to end the call with all parties.

7.5.2 Syntax :

Command syntax: AT+WFSH

OK

Command syntax: AT+WFSH= < phone_number > (for a flash with information)

OK

Unsolicited result syntax: +WFSH (confirms a flash was sent to the base station) See section 13.

Command	Possible responses
<p>ATD8585551212; <i>Note: Make a voice call</i></p> <p>AT+WFSH <i>Note: Send a flash to the Base Station (toggle to the second call).</i></p> <p><i>Note: Conversation with second call.</i></p> <p>AT+WFSH Send a flash to the Base <i>Note: Send a flash to the Base Station (toggle to the first call).</i></p> <p>ATH <i>Note: Release the all calls.</i></p>	<p>OK +WORG:8585551212 +WCNT:3 <i>Note: Conversation...</i></p> <p>+CCWA:"8582701234",129 <i>Note: Indication of another incoming call</i></p> <p>OK +WFSH <i>Note: Flash sent to the Base Station. Call switches to the second call. However, this is not 100% guaranteed because the there is not confirmation from the Base Station.</i></p> <p>OK +WFSH <i>Note: Flash sent to the Base Station. Call switches to the first call. However, this is not 100% guaranteed because the there is not confirmation from the Base Station.</i></p> <p>OK +WEND:10 <i>Note: All Calls End</i></p>
<p>ATD8585551212; <i>Note: Make a voice call</i></p> <p>AT+WFSH=6195552121 <i>Note: Place first call on hold, connect to second party.</i></p> <p>AT+WFSH <i>Note:Connect all 3 parties.</i></p> <p>AT+WFSH</p> <p>ATH</p>	<p>OK +WORG:8585551212 +WCNT:3 <i>Note: Conversation...</i></p> <p>OK +WFSH <i>Note: Module now places first call on hold, and attempts connection to second call.</i></p> <p>OK +WFSH <i>Note: All 3 parties now connected.</i></p> <p>OK +WFSH <i>Note: Disconnect second party, connected to first party only.</i></p> <p>OK +WEND:10</p>

7.6 List current call state +CLCC

7.6.1 Description :

This command is used to return the current call state of the module.

7.6.2 Syntax :

Command syntax : AT+CLCC

+CLCC : <state>, <mode>, <termination>

OK

Command	Possible responses
AT+CLCC <i>Note: Seek current phone state</i>	+CLCC: 0,9,0 OK <i>Note : Command valid</i>

7.6.3 Defined values :

<state> (state of the call):

0: no call

1: traffic

2: dialing (MO call)

3: incoming (MT call)

<mode> (teleservice) :

0: voice

1: data

2: fax

3: sms

4: otasp

5: markov or loopback

9: unknown or not applicable

<termination>

0: unknown or not applicable

1: mobile terminated (MT) call

2: mobile originated (MO) call

8 Data commands

8.1 Using AT Commands during a data connection

To use AT Commands during a data connection (e.g. while the product is in online mode), it is necessary either to switch to offline mode, or to use the **specific +WMUX** command to enable Commands / Data multiplexing.

8.1.1 Switch from online to offline mode

To switch from online mode to offline mode, the “+++” sequence must be sent. Following this, the product gets back to offline mode with an “OK” response, and an AT command can be sent.

Note :

the “+++” sequence only works with the **+ICF** command using the following settings:

- 8 data bits, with no parity
- 7 data bits, with even parity

8.1.2 Switch from offline to online mode

See the **ATO** command description.

8.2 Select mode +FCLASS

8.2.1 Description

This command puts the product into a particular operating mode for fax.

8.2.2 Syntax :

Command syntax: AT+FCLASS= <n>

Command	Possible responses
AT+FCLASS=? <i>Note : Test command</i>	+FCLASS: (0,2) OK <i>Note : Fax class 1 not supported</i>
AT+FCLASS=? <i>Note : Test command</i>	+FCLASS: (0,1,2) OK <i>Note : Fax class 2 supported</i>
AT+FCLASS=0 <i>Note : Data mode requested</i>	OK <i>Note : Command valid</i>
AT+FCLASS=2 <i>Note : Fax class 2 mode requested</i>	OK <i>Note : Command valid</i>
AT+FCLASS? <i>Note : Current value</i>	+FCLASS: 2 OK <i>Note : Command valid</i>

8.2.3 Defined values :

<n>

0: Data

1: Fax class 1

2: Fax class 2

8.3 Cellular result codes +CRC

8.3.1 Description :

This command gives more detailed ring information for an **incoming call**. Instead of the string "RING", an extended string is used to indicate which type of call is ringing (e.g. +CRING:VOICE). These extended indications are:

+CRING:VOICE	for normal voice calls
+CRING:DATA	for all types of data calls
+CRING:FAX	for all types of fax calls
+CRING:OTAPA	for OTAPA calls
+CRING:TEST	for markov, loopback, and test calls
+CRING:UNKNOWN	for unknown/undefined calls types

8.3.2 Syntax :

Command syntax : AT+CRC

Command	Possible responses
AT+CRC=0 <i>Note : Extended reports disabled</i>	OK <i>Note : Command valid</i>
AT+CRC=1 <i>Note : Extended reports enabled</i>	OK <i>Note : Command valid</i>

8.4 DTE-DCE local rate reporting +ILRR

8.4.1 Description :

This parameter controls whether or not the extended-format "+ILRR:<rate>" information text is transmitted from the DCE to the DTE. Currently the product only supports 0 = OFF.

8.4.2 Syntax :

Command syntax : AT+ILRR

Command	Possible responses
AT+ILRR=0 <i>Note : Local port rate report disabled</i>	OK <i>Note : Command valid</i>

8.5 V42 bis data compression +DS

8.5.1 Description :

This command enables or disables V.42bis data compression if this feature is provided on the PSTN in the IWF.

8.5.2 Syntax :

Command syntax : AT+DS=<dir>,<neg>,<P1>,<P2>

Command	Possible responses
AT+DS=3,0,4096,250 <i>Note : Set new parameters</i>	OK <i>Note : Command valid</i>
AT+DS? <i>Note : Current values</i>	+DS: 3,0,4096,20 OK <i>Note : Command valid</i>

8.5.3 Defined values :

Four numeric sub-parameters are accepted:

< dir >: specifies the desired direction(s) of operation of the data compression function; from the DTE point of view, **(default is 3)**,

<dir>

- 0: Negotiated ... no compression
- 1: Transmit only
- 2: Receive only
- 3: Both directions, accept any direction

< neg >: specifies whether or not the DCE should continue to operate if the desired result is not obtained, **(default is 0)**,

< neg >

- 0: Do not disconnect if V.42 bis is not negotiated by the remote DCE as specified in <dir>
- 1: Disconnect if V.42 bis is not negotiated by the remote DCE as specified in <dir>

< P1 >

512-4096: specifies the maximum number of dictionary entries that should be negotiated, **(default is 4096)**,

< P2 >

6-250: specifies the maximum string length to be negotiated, **(default is 250)**.

8.6 V42 bis data compression report +DR

8.6.1 Description :

If this feature is provided by the product this command determines whether or not the use of V42bis is given in an **incoming or outgoing data call**.

The intermediate result code represents current DCE-DCE data compression type. The format of this result code is as follows:

+DR: NONE	Data compression is not in use
+DR: V42B	Rec. V.42 bis is in use in both directions
+DR: V42B RD	Rec. V.42 bis is in use in receive direction only
+DR: V42B TD	Rec. V.42 bis is in use in transmit direction only

The +DR intermediate result code, if enabled, is issued before the final result code, before the +ILRR intermediate report and after the service report control +CR.

8.6.2 Syntax :

Command syntax : AT+DR

Command	Possible responses
AT+DR=1 <i>Note : Reporting enabled</i>	OK <i>Note : Command valid</i>
AT+DR? <i>Note : Current value</i>	+DR: 1 OK <i>Note : Command valid</i>

9 V24-V25 commands

9.1 Fixed DTE rate +IPR

9.1.1 Description :

This commands specifies the data rate at which the DCE will accept commands.

9.1.2 Syntax :

Command syntax : AT+IPR

Command	Possible responses
AT+IPR? <i>Note :</i>	+IPR: 9600 OK <i>Note : Current rate is 9600 bps</i>
AT+IPR=? <i>Note :</i>	+IPR: (0,2400,4800,9600,19200), (300,600,1200,38400,57600,115200) OK <i>Note : Possible value (*)</i>
AT+IPR=38400 <i>Note :</i>	OK <i>Note : Disable autobauding and set rate to 38400 bps</i>
AT+IPR=0 <i>Note :</i>	OK <i>Note : Enable autobauding</i>

9.2 DTE-DCE character framing +ICF

9.2.1 Description :

This command is used to determine the local serial port start-stop (asynchronous) character framing that the DCE uses.

9.2.2 Syntax :

Command syntax: AT+ICF= <format>, <parity>

Command	Possible responses
AT+ICF=3,3 <i>Note :</i>	OK <i>Note : New values</i>
AT+ICF? <i>Note :</i>	+ICF: 3,3 OK <i>Note : Current values</i>
AT+ICF=? <i>Note :</i>	+ICF: (3-3),(0-3) OK <i>Note : Possible values</i>

9.2.3 Defined values :

<format>

- 0: Autodetect
- 1: 8 Data 2 Stop
- 2: 8 Data 1 Parity 1 Stop
- 3: 8 Data 1 Stop
- 4: 7 Data 2 Stop
- 5: 7 Data 1 Parity 1 Stop
- 6: 7 Data 1 Stop

<parity>

- 0: Odd
- 1: Even
- 2: Mark
- 3: None

Note 1) Rm interface is supported at 8 data bits, No Parity, 1 stop bit. ERROR returned for other formats.

9.3 DTE-DCE local flow control +IFC

9.3.1 Description :

This command is used to control the operation of local flow control between the TE2 and the MT2

9.3.2 Syntax :

Command syntax : AT+IFC=<n1>,<n2>

Command	Possible responses
AT+IFC? <i>Note :</i>	+IFC: 2,2 OK <i>Note : Current values</i>
AT+IFC=? <i>Note :</i>	+ICF: (0,3),(0,2) OK <i>Note : Possible values</i>
AT+ICF=0,0 <i>Note :</i>	OK <i>Note : New values</i>

9.3.3 Defined values :

< DCE_by_DTE >

- 0: none (supported)
- 1: Xon/Xoff local circuit 103 (not supported)
- 2: RTS (supported)
- 3: Xon/Xoff global on circuit 103 (not supported)

9.4 Set DCD signal &C

9.4.1 Description :

This commands controls the Data Carrier Detect (DCD) signal.

9.4.2 Syntax :

Command syntax : AT&C

Command	Possible responses
AT&C0 <i>Note : DCD always on</i>	OK <i>Note : Command valid</i>
AT&C1 <i>Note : DCD matches state in accordance with the specified service</i>	OK <i>Note : Command valid</i>
AT&C2 <i>Note : Always on wink on channel disconnect</i>	OK <i>Note : Command valid</i>

9.5 Set DTR signal &D

9.5.1 Description :

This commands controls the Data Terminal Ready (DTR) signal.

9.5.2 Syntax :

Command syntax : AT&D

Command	Possible responses
AT&D0 <i>Note : The DTR signal is ignored</i>	OK <i>Note : Command valid</i>
AT&D1 <i>Note : Enter online command state following ON-to-OFF transition of circuit 108/2</i>	OK <i>Note : Command valid</i>
AT&D2 <i>Note : Enter command state following ON-to-OFF transition of circuit 108/2.</i>	OK <i>Note : Command valid</i>

9.6 Back to online mode 0

9.6.1 Description

If a connection has been established and the MS is in command mode, this command allows you to return to online data mode.

9.6.2 Syntax

Command syntax : ATO

Command	Possible responses
ATO Return from online mode to offline mode	OK

9.7 Result code suppression Q

9.7.1 Description :

This command determines whether the mobile equipment sends result codes or not

9.7.2 Syntax :

Command syntax : ATQ

Command	Possible responses
ATQ0 <i>Note : Return result codes</i>	OK <i>Note : Command valid</i>
ATQ1 <i>Note : Result codes are suppressed and not transmitted</i>	(none) <i>Note : No response</i>

9.8 DCE response format V

9.8.1 Description :

This command determines the DCE response format, with or without header characters <CR><LF>, and with the use of numeric result codes.

9.8.2 Syntax :

Command syntax : ATV

Command	Possible responses
ATV0 <i>Note : Display result codes as numbers</i>	0 <i>Note : Command is valid (0 means OK)</i>
ATV1 <i>Note : Display result codes as words</i>	OK <i>Note : Command valid</i>

9.9 Auto-tests &T

9.9.1 Description:

AT&T1 is used to perform audio loop back in the current audio path. This command can be used to validate the audio loop.

Command syntax : AT&T<num>

Command	Possible responses
AT&T1	OK <i>Note : Audio loopback is on.</i>
AT&T2	OK <i>Note : Aduio loopback is off.</i>

9.9.2 Defined Values:

<num>

0 – not defined returns OK

1 – Audio loopback on for current path

2 – Audio loopback is off.

9.10 Echo E

9.10.1 Description :

This command is used to determine whether or not the modem echoes characters received by an external application (DTE).

9.10.2 Syntax :

Command syntax : ATE

Command	Possible responses
ATE0 <i>Note : Characters are not echoed</i>	OK <i>Note : Done</i>
ATE1 <i>Note : Characters are echoed</i>	OK <i>Note : Done</i>

9.11 Display configuration &V

9.11.1 Description

This command is used to display the modem configuration.

&V

&V0 : Display the modem configuration in RAM.

&V1 : Display the modem configuration in NV-RAM.

&V2 : Display the modem factory configuration.

The parameters displayed are the following :

&C: 2; &D: 2; &F: 0; E: 1; L: 0; M: 0; Q: 0; V: 1; X: 4; Z: 0; %D: 0 %C: 0; S0: 0; S10: 14; S11: 95; S3: 13; S4: 10; S5: 8; S6: 2; S7: 50 S8: 2; S9: 6; +FCLASS: 0; +CFG: ""; +FCC: 0,1,0,0,0,0,0 +FIS: 0,1,0,0,0,0,0; +CDR: 0; +CDS: 0,1,2048,6; +CFC: 0; +CQD: 10 +CRC: 0; +CRM: 0; +CTA: 0; +CXT: 0; +DR: 0; +DS: 3,0,2048,6; +EB: 1,0,30 +EFCS: 1; +ER: 0; +ES: 3,0,2; +ESR: 1; +ETBM: 1,1,20; +FAA: 0 +FAP: 0,0,0; +FBO: 0; +FBU: 0; +FCQ: 1,0; +FCR: 0; +FCT: 1E; +FEA: 0 +FFC: 0,0,0,0; +FHS: 0; +FIE: 0; +FIP: 0; +FLI: ""; +FLO: 1; +FLP: 0 +FMS: 0; +FNR: 0,0,0,0; +FNS: ""; +FPA: ""; +FPI: ""; +FPP: 0; +FPR: 8 +FPS: 1; +FPW: ""; +FRQ: 0,0; +FRY: 0; +FSA: ""; +FSP: 0; +ICF: 3,3 +IFC: 2,2; +ILRR: 0; +IPR: 115200; +MA: ; +MR: 0; +MS: ; +MV18R: 0 +MV18S: 0,0,0;

9.11.2 Syntax :

Command syntax : AT&V

Command	Possible responses
AT&V <i>Note : Display active parameters in RAM</i>	See above OK <i>Note : Done</i>

9.12 Request Identification Information I

9.12.1 Description :

This command causes the product to transmit one or more lines of information test from the MT2.

Command syntax : ATI<num>

Command	Possible responses
ATI0	WAVECOM MODEM 800 1900 OK <i>Note : Done</i>
ATI3	S/W VER: WISMOQ WQ1.6A May 17 2002 17:30:00 OK
ATI6	+CGSM, +CIS707, +MS, +ES, +DS, +FCLASS OK

9.12.2 Defined values

Valid range <num> is 0 – 7

For ATI6 the IS-707 command, +GCAP, is more applicable for the MT2.

10 Specific AT commands

10.1 Cell environment description +CCED

10.1.1 Description :

This command can be used by the application to retrieve the parameters of the main cell and of up to six neighbouring cells.

There are two possible methods for the external application to ascertain these cell parameters: on request by the application or automatically by the product every 5 seconds.

Automatic mode is not supported during communication or registration.

10.1.2 Syntax :

Command syntax: AT+CCED=<mode>[, <requested dump>]

10.1.3 Defined values :

<mode>

0: One shot requested

1: Automatic shots requested

2: Stop automatic shots

Automatic shots will not return a terminating "OK".

<requested dump>

1: Main Cell : band class, Channel #, SID, NID, Base Station P Rev, Pilot PN offset, Base Station ID, Slot cycle index, Raw Ec/Io, Rx power, Tx power, Tx Adj

2: Neighbor1 to Neighbor20 (max) : First parameter is the number of neighbors. Following parameters: Neighbor1 band class, Neighbor1 Pilot PN, Neighbor1 frequency assignment, Neighbor2 Pilot PN, Neighbor2 band class, Neighbor2 frequency assignment, ...

4: Timing Advance: Always zero for CDMA

Combination (addition of the values) of the requested dump is supported.

Where <value> is the ASCII string of the values (in decimal form except the LAC and CI values which are in hexadecimal form) of the parameters. If a field cannot be measured – or has no sense – the parameter is not filled in (two consecutive commas are then found).

If the <requested dump> parameter is absent, that of the last +CCED command (or 15 by default) will be used.

10.2 Automatic RxLev indication +CCED

10.2.1 Description :

The CCED command has been extended to indicate the *received signal strength indication* (rssi) of the main cell. The command principle has not changed.

10.2.2 Syntax :

Command Syntax: AT+CCED=<mode>[, <requested dump>]

10.2.3 Defined values :

<mode>

- 0: One shot requested
- 1: Automatic shots requested
- 2: Stop automatic shots

<requested dump>

8: Main cell RSSI indications (RxLev) from 0 to 31

The response will be a +CSQ response and not a +CCED response. The 07.07 format for +CSQ is respected. The <ber> is not evaluated by this command, so the <ber> value will always be 99.

+CSQ :<rss>, 99

OK

This +CSQ response, when automatic shots are selected, is sent every time the <rss> measured by the product changes. Automatic shots are supported in idle mode and during communication.

Combination (addition of the values) of the requested dump (1,2,4,8) are supported but the activation or deactivation of this flow (8) does not affect the other flows. Both +CCED and +CSQ responses may then be generated.

If the <requested dump> parameter is absent, the last +CCED command parameter (or 15 by default) will be used.

Command	Possible responses
AT+CCED=0,15 <i>Note: one shot, dump all</i>	+CSQ:29, 99 +CCED:0,2,0,300,384,0,160,384,0,384,4,8, 6,296, 6033,1,16,-69,-67,-63 OK <i>Note: +CCED has the format: +CCED: <timing advance>,<neighbor parameters>,<main cell parameters>.</i>

10.3 General Indications +WIND

10.3.1 Description :

Wavecom has introduced a general mechanism to send unsolicited non-standardized indications to the application. The identified unsolicited non-standardized indications are:

- indication during mobile originated call setup that the calling party is ringing.
- Indication of the availability of the product to receive AT commands after boot.

For each of these indications, a "bit flow" has to be indicated.

10.3.2 Syntax :

Command syntax: AT+WIND= <IndLevel >

10.3.3 Defined values :

<IndLevel>

- 1 (bit-0): Reserved
- 2 (bit-1): Reserved
- 4 (bit-2) : Reserved
- 8 (bit-3): Indication that the product is ready to process all AT commands
- 16 (bit-4): Reserved
- 32 (bit-5): Reserved
- 64 (bit-6): Network service available indication
- 128 (bit-7): Network lost indication
- 256 (bit-8): Reserved
- 512 (bit-9): Reserved

If <IndLevel> is equal to 0 (default value), no unsolicited "+WIND: <IndNb>" will occur.

Combination (addition of the values) is used to allow more than one indication flow.
0 ≥ IndLevel ≤ 1023

The response is OK if the values are in the previous range.

The unsolicited response will then be:

+WIND : <event> [,<idx>]

<idx>: Call identifier, defined in +CLCC command.

The supported events are:

<event>

- 0: Reserved
- 1: Reserved
- 2: Reserved
- 4: Reserved
- 8: Product is ready to process all AT commands
- 16: Reserved
- 32: Reserved
- 64 : The network service is available for an emergency call.
- 128: The network is lost.
- 256: Reserved
- 512: Reserved

The AT+WIND=? Command is supported and indicates the <allowed bit flows>.

Default value is 8: AT command processing ready indication.

AT+WIND=? Gives the possible value range (0-1023)

Command	Possible responses
AT+WIND=128 <i>Note: Turn on Network lost indication only</i>	OK

10.4 Analog digital converters measurements +ADC

10.4.1 Description :

This command gets the raw value of the ADC conversion. Three ADC read values are specified: VBATT, THERM, HDET.

10.4.2 Syntax :

Command syntax: AT+ADC=<item>

Command	Possible responses
AT+ADC=0 <i>Note : Select VBATT</i>	+ADC: 185 OK <i>Note : raw value for VBATT</i>
AT+ADC=1 <i>Note : Select THERM</i>	+ADC: 238 OK
AT+ADC=? <i>Note : Ask for the list of possible values</i>	+ADC: (0-2) <i>Note : possible values 0 –2</i>
AT+ADC? <i>Note : Ask for the current item selected</i>	+ADC: 1 OK <i>Note : THERM selected</i>

10.4.3 Defined values :

The supported items are:

<item>

- 0: VBATT
- 1: THERM
- 2: HDET

10.5 Mobile Equipment event reporting +CMER

10.5.1 Description :

This command enables or disables sending of unsolicited result codes in the case of a key press.

10.5.2 Syntax :

Command Syntax: AT+CMER=<keyp>

10.5.3 Defined values :

<keyp> (keypad) :

0: No keypad event reporting.
 1: Keypad event reporting are routed using unsolicited code : +CKEV : <key>, <press>

<press>
 1: key press
 0: key release

<key> : Keyboard map according to Qualcomm HS definitions

10.6 Read GPIO value +WIOR

10.6.1 Description

Set the I/O port as an input and read the I/O pin value.

10.6.2 Syntax

Command syntax: AT+WIOR=<index>
 Response syntax: +WIOR: <value>

Command	Possible responses
AT+WIOR=32 <i>Read GPIO 32 value</i>	+WIOR: 0 OK <i>GPIO 32 value is 0</i>

10.6.3 Defined values

<index>
 The GPIO to read. (0-47)
 <value>
 Value of the GPIO pin.

10.7 Write GPIO value +WIOW

10.7.1 Description

Set the I/O port as an output and set the requested I/O pin value.

10.7.2 Syntax

Command syntax: AT+WIOW=<index>,<value>

Command	Possible responses
AT+WIOW=47,1 <i>Set GPIO 47 to 1</i>	OK <i>GPIO value is written</i>

10.7.3 Defined values

<index>

The GPIO to write. (0-47)

<value>

0: I/O bit is set to 0.

1: I/O bit is set to 1.

10.8 Play tone +WTONE

10.8.1 Description :

This **specific** command allows a tone to be played on the current speaker or on the buzzer. Frequency, volume and duration can be set.

10.8.2 Syntax :

Command syntax : AT+WTONE=<mode>[,<dest>,<freq>,<volume>,<duration>]

Response syntax : OK or ERROR

Command	Possible responses
AT+WTONE=1,1,300,2,50 <i>Note : Play a tone</i>	OK <i>Note : Done</i>
AT+WTONE? <i>Note : Current value</i>	+WTONE: 1,1,300,2,50 OK
AT+WTONE=0 <i>Note : Stop playing</i>	OK <i>Note : Done</i>
AT+WTONE=? <i>Note : Test command</i>	+WTONE: (0-1),(1-2),(1-4000),(0-3),(0-50) OK <i>Note : Done</i>

10.8.3 Defined values :

<mode>

0: Stop playing.

1: Play a tone

<dest>: This parameter sets the destination (mandatory if <mode>=1)

<dest>

1: Speaker

2: Buzzer

<freq>: This parameter sets tone frequency (in Hz) (mandatory if <mode>=1). The range is between 1 and 4000Hz.

<volume> (0-3): This parameter sets the tone volume. The default value is 1. Values are the same as +CRSL.

<duration> (0-50): This parameter sets tone duration (unit of 100 ms). When this parameter is equal to 0 (default value), the duration is infinite, and the tone can be stopped by AT+WTONE=0.

10.9 Play DTMF tone +WDTMF

10.9.1 Description :

This **specific** command allows a DTMF tone to be played on the current speaker. DTMF, volume and duration can be set.

This command is only used to play a DTMF tone. To send a DTMF over the CDMA network, use the +VTS command.

10.9.2 Syntax :

Command syntax : AT+WDTMF=<mode>[,<dtmf>,<volume>,<duration>]

Response syntax: OK or ERROR

Command	Possible responses
AT+WDTMF=1,"*",2,10 <i>Note : Play a DTMF tone</i>	OK <i>Note : Done</i>
AT+WDTMF? <i>Note : Current value</i>	+WDTMF: 1, "1",2,10 <i>Note :</i>
AT+WDTMF=0 <i>Note : Stop playing</i>	OK <i>Note : Done</i>
AT+WDTMF=? <i>Note : Test command</i>	ERROR <i>Note : Done</i>

10.9.3 Defined values :

<mode>

0: Stop playing.

1: Play a DTMF tone

<dtmf>:

This parameter sets the DTMF to play in {0-9,*,#,A,B,C,D} (mandatory if <mode>=1)

<volume> (0-3):

This parameter sets tone gain. The values are identical to those of the +WTONE (speaker) command (mandatory if <mode>=1).

<duration> (0-50):

This parameter sets the tone duration (unit of 100 ms). When this parameter is 0 (default value), the duration is infinite, and the DTMF tone can be stopped by AT+WDTMF=0.

10.10 Hardware Version +WHWV

10.10.1 Description :

This **specific** command gets the hardware version.

10.10.2 Syntax :

Command syntax : AT+WHWV

Command	Possible responses
AT+WHWV <i>Note : Request Hardware Version</i>	Hardware Version 4.14 OK <i>Note : Hardware version is 4.14</i>
AT+WHWV <i>Note : Request Hardware Version</i>	Hardware Version -.— OK <i>Note : No hardware version available</i>

10.11 Wavecom Select Voice Gain +WSVG

10.11.1 Description :

The product has 2 voice gain paths, this **specific** command allows the path to be selected.

10.11.2 Syntax :

Command syntax : AT+WSVG = <n>

Command	Possible responses
AT+WSVG=<n>	
AT+WSVG=0 <i>Note : Select Path 1 (Default)</i>	OK <i>Note : Path 1 selected</i>
AT+WSVG=1 <i>Note : Select Path 2</i>	OK <i>Note : Path 2 selected</i>
AT+WSVG=? <i>Note : Get the list of possible values</i>	+WSVG: (0-1) <i>Note : possible values 0 or 1</i>
AT+WSVG? <i>Note : Get the current value</i>	+WSVG: 1 <i>Note : Path 1 is selected</i>

10.11.3 Defined values

<n> Path

0: HANDSET (Default)

1: HEADSET

10.12 Wavecom Status Request +WSTR

10.12.1 Description :

This **specific** command returns some operation status. It can be used for ex. To check the state of the initialization sequence; the different values returned are Not started, Ongoing, Finished.

10.12.2 Syntax :

Command syntax: AT+WSTR=<status>

Response syntax: +WSTR: <status>,<value>

Command	Possible responses
AT+WSTR=<status>	+WSTR: <status>,<value>
AT+WSTR=1 <i>Note : Select the status 1 (INIT SEQUENCE)</i>	+WSTR: 1,2 OK <i>Note : Init finished</i>
AT+WSTR=2 <i>Note : Select the status 2 (NETWORK STATUS)</i>	+WSTR: 2,1 OK <i>Note : The network is available</i>
AT+WSTR=? <i>Note : Ask the list of possible values</i>	+WSTR: (1-2) <i>Note : possible values : 1, 2</i>

10.12.3 Defined values

<status> 1 Initialisation sequence

<value>

0: Not started

1: On going

2: Finished

<status> 2 Network status

<value>

0: No network

1: Network available

10.13 Wavecom Ring Indicator Mode +WRIM

10.13.1 Description :

This **specific** command sets or returns the state of the Ring Indicator Mode.

In pulse RI mode, an electrical pulse lasting approximately 10µs is sent on the Ring Indicator signal just before sending any unsolicited AT response in order not to lose AT responses when client tasks are in sleep state. Still in RI mode, when receiving incoming calls, electrical pulses are sent on the RI signal.

In up-down RI mode, no pulses are sent before unsolicited AT response, and up-down signals are sent when receiving an incoming call.

10.13.2 Syntax :

Command syntax: AT+WRIM=<n>

Command	Possible responses
AT+WRIM=<n>	
AT+WRIM=0 <i>Note : Select up-down RI mode</i>	OK <i>Note : up-down RI mode selected</i>
AT+WRIM=1 <i>Note : Select pulse RI mode</i>	OK <i>Note : pulse RI mode selected</i>
AT+WRIM=? <i>Note : Ask the list of possible values</i>	+WRIM: (0-1) <i>Note : possible values 0 or 1</i>
AT+WRIM? <i>Note : Ask the current value</i>	+WRIM: 1 <i>Note : current RI mode is pulse RI.</i>

10.13.3 Defined values

<n>

0: up-down RI mode

1: pulse RI mode

10.14 Wavecom 32kHz Sleep Mode +W32K
10.14.1 Description :

This **specific** command allows the 32kHz sleep mode to be enabled or disabled. When sleep mode is entered, the product uses a 32kHz internal clock during inactivity stages. When enabled, sleep mode is active after 1 to 15 minutes.

10.14.2 Syntax :

Command syntax : AT+W32K=<mode>

Command	Possible responses
AT+W32K=1 <i>Note : Enable 32kHz sleep mode</i>	OK <i>Note : 32kHz sleep mode is enabled</i>
AT+W32K=0 <i>Note : Disable 32kHz sleep mode</i>	OK <i>Note : 32kHz sleep mode is disabled</i>

10.14.3 Defined values

<mode>

0: Disable 32kHz powerdown mode

1: Enable 32kHz powerdown mode

10.15 Wavecom Change Default Melody +WCDM

10.15.1 Description :

This **specific** command allows a manufacturer specific melody to be selected. This default melody will be played for any new incoming voice call, either on the buzzer or on the speaker. If melody 0 is selected, no melody will be played.

Note :

Selection of the player will have effect on the setting of the WCDP command.

10.15.2 Syntax :

Command syntax : AT+WCDM=<melody>,<player>

Command	Possible responses
AT+WCDM=0 <i>Note : Select no melody</i>	OK
AT+WCDM=5 <i>Note : Select melody n°5</i>	OK
AT+WCDM? <i>Note : Indicate the current melody</i>	+WCDM: 5,0 OK <i>Note : Melody n°5 is currently selected, and the buzzer is selected to play it.</i>
	RING <i>Note : An incoming call occurs, and the melody n°5 is played on the buzzer.</i>
AT+WCDM=,1 <i>Note : Select the speaker to play the melody on.</i>	OK
AT+WCDM?	+WCDM: 5,1 OK <i>Note : Now the speaker is selected to play the melody if an incoming call occurs.</i>

10.15.3 Defined values

<melody>

0: No melody (**default**)

1...10: Melody 1 to 10

<player>

0: Melody n°<melody> will be played on the buzzer for any new incoming voice call. (**default**)

1: Melody n°<melody> will be played on the speaker for any new incoming voice call.

10.16 Wavecom Software version +WSSW

10.16.1 Description :

This **specific** command displays some internal software reference.

10.16.2 Syntax :

Command syntax : AT+WSSW

Command	Possible responses
AT+WSSW <i>Note : Get Software version</i>	+WSSW: WQ1.6 OK <i>Note : internal software information</i>

10.17 Wavecom Custom Character Set +WCCS

10.17.1 Description :

This **specific** command allows to edit and display the custom character set tables. The "CUSTOM" mode of +CSCS command use this character set. In this mode, when the user enters a string, this string is converted into CDMA alphabet using the Custom To CDMA table. In a similar way, when the user requests a string display, the string is converted from CDMA alphabet using the CDMA To Custom table.

In edition mode, the edition session is terminated by <ctrl-Z>, or aborted by <ESC>. Only hexadecimal characters ('0'...'9', 'A'...'F') can be used. The number of characters entered must equal the edition range requested, otherwise the command will terminate with a "+CME ERROR: 3" result.

10.17.2 Syntax :

Command syntax : AT+WCCS=<mode>,<table>,<char 1>[,<char 2>]

Command	Possible responses
AT+WCCS=0,0,20,30 <i>Note : Display from character 120 to character 130 of the Custom To CDMA conversion table</i>	+WCCS: 11, 78797A2020202020097E05 OK <i>Note : 11 characters displayed</i>
AT+WCCS=1,0,115<CR> 20<ctrl-Z> <i>Note : Edit character 115 of the Custom To CDMA conversion table</i>	OK <i>Note : Edition successful</i>
AT+WCCS=1,1,0,4<CR> 40A324A5E8<ctrl-Z> <i>Note : Edit the 5 first characters of the CDMA To Custom conversion table</i>	OK <i>Note : Edition successful</i>
AT+WCCS=1,1,200 <i>Note : Edit character 200 of CDMA To Custom</i>	+CME ERROR: 3 <i>Note : Index out of range</i>

<i>conversion table</i>

10.17.3 Defined values

<mode>

- 0: Display the table
- 1: Edit the table

<table>

- 0: Custom To CDMA conversion table
- 1: CDMA To Custom conversion table

<char 1>, <char 2> Character range to display/edit. If only <char 1> is present, only this char is displayed/edited.

- 0...127: for CDMA To Custom conversion table
- 0...255: for Custom To CDMA conversion table

10.18 CPHS command +CPHS

10.18.1 Description :

This **specific** command is used to activate, deactivate or interrogate a CPHS feature (e.g. Voice Mail Indicator). Upon performing interrogation (mode = 2), the selected FctId CPHS feature is automatically enabled (status = 1).

Note :

This command may answer +CME ERROR: 3 if the CPHS feature is disabled.

10.18.2 Syntax

Command syntax : AT+CPHS=<Mode>,<FctId>

Command	Possible responses
AT+CPHS=<Mode>,<FctId>	OK +CME ERROR: 3
AT+CPHS?	+CPHS: <Status>,<FctId1><CR<LF> OK
AT+CPHS=?	+CPHS: (0-2),(1-1) OK

10.18.3 Defined values:

<Mode>

- 0: Deactivate a CPHS feature
- 1: Activate a CPHS feature
- 2: Interrogate a CPHS status

<FctId>

- 1: Voice Mail Indicator

<Status>

- 0: CPHS feature disabled
- 1: CPHS feature enabled

10.19 Unsolicited result : Wavecom Voice Mail Indicator +WVMI

10.19.1 Description :

This unsolicited indication gives the status of the Voicemail Inbox.

Syntax : +WVMI: <LineId>,<Num>

Option :

<LineId>

- 1: Line 1

<Num>

The number of messages waiting in the inbox.

- 0: No message waiting.
- 1: One message is waiting
- 3: Three messages are waiting

Command	Possible responses
	+WVMI: 1,2 OK Note: 2 messages are in your voicemail box.

10.19.2 Example

AT+CPHS? +CPHS: 1,0 OK	<i>Interrogate the status of CPHS functionality The voice mail indicator functionality is deactivated</i>
AT+CPHS=3,1 +CME ERROR: 3	<i>Syntax error</i>
AT+CPHS=1,1 OK	<i>Activate the voice mail indicator functionality</i>

10.20 Wavecom Change Default Player +WCDP

10.20.1 Description

This **specific** command allows the default melody player to be selected.

Note :

Selection of the player will have effect on the setting of the WCDM command.

10.20.2 Syntax

Command syntax AT+WCDP = <player>

Command	Possible responses
AT+WCDP=?	+WCDP : (0-1) OK
AT+WCDP=0 <i>Select the speaker.</i>	OK
AT+WCDP?	+WCDP: 0 OK

10.20.3 Defined values :

<player>

0: Speaker
1: Buzzer

10.21 Wavecom Reset +WRST

10.21.1 Description

This **specific** command allows to reset the module after the time specified by the second parameter.

10.21.2 Syntax

Command syntax : AT+WRST =<Mode>,<Delay>

Response syntax : +WRST: <Mode>,<Delay>,<RemainTime>

Command	Possible responses
AT+WRST=?	ERROR
AT+WRST=0 <i>Disable timer</i>	OK
AT+WRST=1,"001:03"	OK

<i>Enable timer and put delay at 1 hour 3 minutes</i>	
AT+WRST?	+WRST: 1,"001:03","001:01" OK <i>Note: Timer activated to reset after 1 hour and 3 minutes. Actually 1 hour and 1 minute remaining before next reset.</i>

10.21.3 Defined values :

<val1> 0: timer reset is disabled
 1: timer reset is enabled
 <Delay> specify the time for reset
 "000:00"- "199:59"
 <RemainTime> time before next reset
 "000:00"- "199:59"

10.22 Set Standard Tone +WSST

10.22.1 Description :

This command allows to set/get the sound level.of the Standard Tones.

10.22.2 Syntax :

Command syntax : AT+WSST=<sound level>

Command	Possible responses
AT+WSST=0 <i>Note : Set volume to Max.</i>	OK
AT+WSST=3 <i>Note : Set volume to Min.</i>	OK
AT+WSST? <i>Note : get current standard tones sound level</i>	+WSST: 3 OK <i>Note : Current level is 3 (min.)</i>
AT+WSST=?	+WSST: (0-3)

10.22.3 Defined values :

<sound level>
 1 Max volume (default)
 1 Min volume

10.23 Set voice privacy level +WPRV

10.23.1 Description :

This command sets the CDMA voice privacy level. This command can only be called during a voice call. X = 0 is normal; x = 1 is secure. Example: AT+WPRV=1 for a secure voice call.

10.23.2 Syntax :

Command syntax : AT+WPRV=<x>

Command	Possible responses
AT+WPRV=0 <i>Note : Set to normal voice call</i>	OK
AT+WPRV=1 <i>Note : Set to secure voice call</i>	OK

11 Extended AT commands in IS707.3

WISMOQ CDMA module also implements the CDMA AT commands as specified in the TIA/EIA/IS-707.3 (please refer to another document in the appendix for the detail) with the exception listed in the following tables:

AT Commands Not Supported Per TIA/EIA/IS707.3

Commands	Description	Status	Explanation
L0	Low speaker volume.	Command accepted, no action taken.	Mobile audio stream not used for Async Data or G3 Fax
L1	Low speaker volume.	Command accepted, no action taken.	Mobile audio stream not used for Async Data or G3 Fax
L2	Med speaker volume.	Command accepted, no action taken.	Mobile audio stream not used for Async Data or G3 Fax
L3	High speaker volume.	Command accepted, no action taken.	Mobile audio stream not used for Async Data or G3 Fax
M0	Speaker off	Command accepted, no action taken.	Mobile audio stream not used for Async Data or G3 Fax
M1	Speaker on until carrier reported	Command accepted, no action taken.	Mobile audio stream not used for Async Data or G3 Fax
+IBC	In-Band Control Compound Parameter. The AT+IBC compound parameter provides for the enabling, disabling and configuration of In-Band Control Service. See Section 8 of ANSI/TIA/EIA-617 for a complete description of this command.	Not implemented	Optional.
+CSO	Change Service Option to Service Option <n>.	Not implemented	Optional
+CAU	Audio passthrough between DTE and MT2 1. Audio Pass Through Disabled 2. Audio Pass Through Enable	Not implemented	N/A
+CPS	Select the service option to be used for packet data service. Values shall be as specified in TSB58	Not implemented	
+CPSR	Enables/disables packet call state reporting. 0 - Disables call state reporting 1 - Enables call state reporting	Not implemented	

AT Commands Not Supported Per TIA/EIA/IS707.3

Commands	Description	Status	Explanation
+CPTC	Controls Traffic Channel state without affecting the IWF Link Layer connection. 0 Release Traffic Channel 1 Originate Traffic Channel	Not implemented	
+CPER	Enables/disables packet call event reporting. 0 Disables call event reporting 1 Enables call event reporting	Not implemented	

Cellular Result Codes Not Supported Per TIA/EIA/IS707.3

Commands	Description	Status	Explanation
+CERROR: BAD REQUEST	Intercept received after call origination.	Not implemented	
+CERROR: LINK FAIL	Mobile station has declared a loss of the Traffic Channel.	Not implemented	
+CERROR: NO SERVICE	Origination was attempted while the mobile station was not able to monitor a CDMA Paging Channel.	Not implemented	
+CERROR: NO <service option> SERVICE	The indicated service option was rejected. The <service option> shall be "ASYNC" or "FAX."	Not implemented	
+CERROR: PAGE FAIL	Mobile station received a page but not an alert.	Not implemented	
+CERROR: PAGED	Mobile station attempted to originate after receiving a page.	Not implemented	
+CERROR: RELEASE	Indicates call release	Not implemented	
+CERROR: RETRY	Reorder received after call origination.	Not implemented	
+CPACKET	May be returned after AT+CRM=1 or 2 or 3. Indicates packet data service is in the <i>Active State</i> .		

Cellular Result Codes Not Supported Per TIA/EIA/IS707.3

Commands	Description	Status	Explanation
+CPSR	Packet call state. Sent autonomously when +CPSR=1.	Not implemented	
+CPER	Packet call event. Sent autonomously when +CPER=1.	Not implemented	
+CERROR: LINK FAIL	Mobile station has declared a loss of the Traffic Channel	Not implemented	
+CERROR: NO SERVICE	Mobile station is not able to monitor a Paging Channel	Not implemented	
+CERROR: RETRY	Reorder received during a reconnect attempt	Not implemented	

12 Qualcomm Defined AT commands for CDMA operation

Table 12-1 Qualcomm Defined AT Commands

Command	Description	Operation
\$QCQNC	Enable/Disable Quick Net Connect (QNC)	0 := Disable QNC capability. This means that packet Originations will use the Packet Data Service Option number. 1 := Enable QNC capability. This means that Packet Originations will use the Async Data Service Option number.
\$QCMTOM	Originate Mobile-to-Mobile Packet Data call using QUALCOMM proprietary Service Option number	Complete command is AT\$QCMTOM=<number>, where <number> is the phone number to dial. This command will originate a Mobile-to-Mobile Packet data call using the QUALCOMM-proprietary Service Option number 0x8003. This is a Rate Set 1 call.
\$QCRLPD	Dump RLP protocol statistics	This command will dump the RLP statistics in ASCII format to the TE2. This does not apply to RLP 3 statistics (see \$QCRL3D).
\$QCRLPR	Reset RLP protocol statistics	This command will zero all the RLP statistics counters. This does not apply to RLP 3 statistics (see \$QCRL3R).
\$QCPPPD	Dump PPP protocol statistics	This command will dump the PPP statistics in ASCII format to the TE2.
\$QCPPPR	Reset PPP protocol Statistics	This command will zero all of the PPP statistics counters.
\$QCIPD	Dump IP protocol statistics	This command will dump the IP statistics in ASCII format to the TE2.
\$QCIPR	Reset IP protocol statistics	This command will zero all of the IP statistics counters.
\$QCUDPD	Dump UDP protocol statistics	This command will dump the UDP statistics in ASCII format to the TE2.
\$QCUDPR	\$QCUDPR Reset UDP protocol statistics	This command will zero all the UDP statistics counters.
\$QCTCPD	Dump TCP protocol statistics	This command will dump the TCP statistics in ASCII format to the TE2.
\$QCTCPR	Reset TCP protocol statistics	This command will zero all the TCP statistics counters.
&V	Dump configuration parameters	This command will dump the status of all AT parameters. This includes the single-letter parameters not otherwise readable, but does not include the +QC parameters.

Command	Description	Operation
&C2	Carrier Detect pin behavior	This command setting will 'wink' (briefly transition off, then back on) the Rm port Carrier Detect pin when Packet Data calls end.
\$QCSO=	Set Data Service Option number set; saves to non-volatile memory	<ul style="list-style-type: none"> 0 := pre-707 SO numbers (RS 1: Async 4, G3 Fax 5, packet 7; RS 2: Async 12, G3 Fax 13, packet 15) 1 := proprietary SO numbers (RS 1: Async 4, G3 Fax 5, packet 7; RS 2: Async 0x8021, G3 Fax 0x8022, packet 0x8020) 2 := IS-707 SO numbers (RS 1: Async 0x1004, G3 Fax 0x1005, packet 0x1007; RS 2: Async 12, G3 Fax 13, packet 15)
\$QCCLR	Clear mobile error log	This command will clear the mobile error log.
\$QCCA	Answer incoming voice call	This command provides a means to answer an incoming voice call via an AT command.
\$QCPKND	Enable/Disable Automatic Packet Detection after a Dial command	<ul style="list-style-type: none"> 0 := Disable Packet No Dial. If a PPP packet is received by the mobile without a just prior dial command (that is, AtdX #), then the mobile will originate a Packet (or QNC) data call. 1 := Enable Packet No Dial. Reception of a PPP packet without a just prior dial command will NOT Originate a PPP packet (or QNC) call.
\$QCVAD=	Prearrangement setting; respond to Page message that has a Voice service option with a Page response that has a Data service option	<ul style="list-style-type: none"> 0 := Off 1 := Fax for next call 2 := Fax for all calls 3:= Async for next call 4:= Async for all calls
\$QCDMR	Set DM baud rat	19200, 38400, 57600, 115200
\$QCMDR=	Set Medium Data Rate (MDR) (also known as HSPD) setting	Valid values are 0 to 3: <ul style="list-style-type: none"> 0 := MDR Service Only. The mobile will originate with SOS 22 or SO 25. The mobile will not negotiate to any other service option if SO 22 and SO 25 are unavailable. 1:= MDR Service, if available. The mobile will originate with SO 22 or SO 25, but will negotiate to a Low-Speed Packet service option if MDR is not available. The mobile will not negotiate to SO 33. 2 := LSPD only. The mobile will originate a Low-Speed Packet call only. The mobile will not negotiate to SO 22, SO 25, or SO 33. 3:= SO 33, if available. The mobile will negotiate to MDR or Low-Speed Packet service options if SO 33 is not available.
QCRL3D	Dump RLP 3 protocol statistics	This command will dump the RLP 3 statistics in ASCII format to the TE2. This does not apply to other versions of RLP (see \$QCRLPD).

Commands	Description	Operation
\$QCRL3R	Reset RLP 3 protocol statistics	This command will zero all of the RLP 3 statistics counters. This does not apply to other versions of RLP (see \$QCRLPR).
\$QCSCRM	Enable/disable mobile from SCRM'ing.	<ul style="list-style-type: none"> 0 := Mobile never SCRMs. 1 := Mobile can SCRM as needed. Command only applies to SO 33 calls. This value is stored in NV. The default is 1.
\$QCTRL	Enable/disable R-SCH throttling.	<ul style="list-style-type: none"> 0 := Mobile never throttles R-SCH 1 := Mobile can throttle R-SCH as needed. Command only applies to SO 33 calls. This value is stored in NV. The default is 1. *For MSM500, MSM5105, and MSM5100 ASICs only.
\$QCMIP	Enable/Disable Mobile IP □ _i	0 := Mobile IP disabled, Simple IP only. 1 := Mobile IP preferred. In the initial MIP registration, if the network does not support Mobile IP, then the mobile automatically reverts to Simple IP (force a PPP renegotiation by sending a LCP C-Req). However, if a Mobile IP session is registered, and then the mobile enters a network that does not support Mobile IP, the mobile will drop the session and inform the upper layers of the failure (for example, by dropping DCD to a laptop). 2 := Mobile IP only. The mobile will make data calls only when Mobile IP is supported in the network. During a MIP session, if the mobile hands off to a network that does not support MIP, then the mobile will drop the session and inform the upper layers of the failure (for example, by dropping DCD to a laptop). This value is stored in NV. The default value is 0. Note: When the AT\$QCMIP value is changed to 1 or 2, this modifies the value of AT+CRM to 2. AT+CRM with a value of 2 enables network model operation. Changing the value to 0 will reset the AT+CRM to its original value. Note: This change is <i>not</i> supported by DMSS 5105 Release 1.0 Commercial. Note: When the AT\$QCMIP value is changed to 1 or 2, this modifies the value of AT\$QCMDR to 3. AT\$QCMDR=3 means that the mobile tries Service Option 33 when it is in a cdma2000 network that advertises P_REV 6 or higher. When AT\$QCMIP >0 and an attempt is made to set AT\$QCMDR to less than 3, the mobile will return ERROR. Note: When the AT\$QCMIP value is set to 1 or 2, this changes the value of AT\$QCPKND to 0. This means that the mobile must see a dial string (such as ATDT#777) on the serial interface before it will originate packet data calls. When AT\$QCMIP >0 and an attempt is made to set AT\$QCPKND to 1, the mobile returns ERROR. Note: This AT command is for test purposes only and should not be changed by the mobile phone user.

Commands	Description	Operation
\$QCMIPP	Select MIP user profile to be active	Takes a profile number between 0 and 5. This value is stored in NV. This AT command is expected to be used by users to configure Dial-Up Networking
\$QCMIPT	Enables/Disables the use of rfc2002bis authentication	<ul style="list-style-type: none">• 0:= Use of rfc2002bis authentication is disabled. Rfc2002 style authentication is used instead.• 1:= Use of rfc2002bis authentication is enabled. Note: This AT command is for test purposes only and should not be changed by the mobile phone user.

13 Unsolicited AT Result Codes

13.1 Cell Broadcast Message Directly Displayed +CBM

13.1.1 Description :

This command indicates a Cell Broadcast message has been received and, according to message storage preferences (+CNMI), is to be directly displayed.

13.1.2 Syntax :

Response syntax : +CBM: [<alpha>,<length> <CR> <LF> <pdu> (PDU mode)
 +CBM: <oa>,<alpha>,<scts> [<tooa>,<length>] <CR><LF><data> (text mode)

Example Result
+CBM: "123456",98/10/01,12 :3000+00",129,5<CR><LF> Hello <i>Note : Cell broadcast message received</i>

13.2 Cell Broadcast Message Stored in Memory +CBMI

13.2.1 Description :

This command indicates a Cell Broadcast message has been received and, according to message storage preferences (+CNMI), is to be stored in memory.

13.2.2 Syntax :

Response syntax : +CBMI: "BC",<index>

Example Result
+CBMI: "BC",5 <i>Note : Cell broadcast message received and stored in "BC" memory at index 5</i>

13.3 Cell Environment Description Indication +CCED

13.3.1 Description :

This command indicates cell environment description. It is returned when the +CCED AT command is set to return automatic shots of the cell environment. For more information, see the +CCED AT command.

13.3.2 Syntax :

Response syntax : +CCED: <dump>

Example Result

+CCED:0,2,0,300,384,0,160,384,0,384,4,8, 6,296, 6033,1,16,-69,-67,-63

Note : Cell environment description indication in response to AT+CCED=1,7

13.4 Call Waiting Indication +CCWA

13.4.1 Description :

This unsolicited command indicates another incoming call is occurring during an existing call. See +WFSH, section 7.5 for information about handling call waiting situations.

13.4.2 Syntax :

Response syntax : +CCWA: <caller_id>, <type>

Example Result

+CCWA: 18005551212,129

Note : Incoming call from 1-800-555-1212, type always equals 129.

13.5 SMS Status Report Indication Directly Displayed +CDS

13.5.1 Description :

This command indicates an SMS status report has been received and, according to message storage preferences (+CNMI), is to be directly displayed.

13.5.2 Syntax :

Response syntax : +CDS : <length> <CR> <LF> <pdu> (PDU mode)

+CDS : <fo>,<mr>, [<ra>] , [<tora>], <scts>,<dt>,<st> (Text mode)

Example Result

+CDS : 2, 116, "3146290800", 129, "98/10/01,12 :30 :07+04", "98/10/01 12 :30 :08+04", 0

Note : SMS status report received

13.6 SMS Status Report Indication Stored in Memory +CDSI

13.6.1 Description :

This command indicates an SMS status report has been received and, according to message storage preferences (+CNMI), is to be stored in memory.

13.6.2 Syntax :

Response syntax : +CDSI: "SR",<index>

Example Result

+CDSI: "SR",5

Note : SMS status report received and stored in "SR" memory at index 5

13.7 Key Press or Release +CKEV

13.7.1 Description :

This command a key has been pressed or released.

13.7.2 Syntax :

Response syntax : +CKEV: <key>,<press>

Example Result

+CKEV: 9,0

Note : Indicates key 9 has been released

13.7.3 Defined values :

<key> Keyboard map according to Qualcomm HS definitions

<press>

1: key press

0: key release

13.8 Caller ID Presentation +CLIP

13.8.1 Description :

This unsolicited command indicates caller ID information is available for the current incoming call. See +CLIP, section 7.4, for enable and disabling this result.

Syntax :
Response syntax : +CLIP: <caller_id>, <type>

Example Result

+CLIP: 18005551212,129

Note : Incoming call from 1-800-555-1212, type always equals 129.

13.9 Incoming Message Directly Displayed +CMT

13.9.1 Description :

This command indicates an incoming message has been received and, according to message storage preferences (+CNMI), is to be directly displayed.

13.9.2 Syntax :

Response syntax : +CMT: [<alpha>,<length> <CR> <LF> <pdu> (PDU mode)
+CMT: <oa>,<alpha>,<scts> [<tooa>,<length>] <CR><LF><data> (text mode)

Example Result

+CMT: "123456",98/10/01,12 :3000+00",129,5<CR><LF>

Hello

Note : Incoming message received

13.10 Incoming Message Stored in Memory +CMTI

13.10.1 Description :

This command indicates an incoming message has been received and, according to message storage preferences (+CNMI), is to be stored in memory.

13.10.2 Syntax :

Response syntax : +CMTI: "MT",<index>

Example Result

+CMTI: "MT",5

Note : Incoming message received and stored in "MT" memory at index 5

13.11 Mode Preference +COPS

13.11.1 Description :

This unsolicited command indicates a change in mode preference has taken place. See +COPS, section 5.2 for information about Changing Mode Preference.

13.11.2 Syntax :

Response syntax : +COPS: <mode>

AT+COPS=0 <i>Note : Ask for Automatic mode</i>	OK +COPS:0 <i>Note: Unsolicited +COPS result confirms Automatic mode is requested</i>
AT+COPS=1 <i>Note : Ask for PCS mode</i>	OK +COPS:1 <i>Note: Unsolicited +COPS result confirms PCS mode is requested</i>
AT+COPS=2 <i>Note : Ask for Cellular mode</i>	OK +COPS:2 <i>Note : Unsolicited +COPS result confirms Cellular mode is requested</i>

13.12 Registration & Roaming +CREG

13.12.1 Description :

This unsolicited command indicates the current state of roaming . See +COPS, section 5.2 for information about Changing Mode Preference.

13.12.2 Syntax :

Response syntax : +CREG: <stat>

Example Result
+CREG: 2 <i>Note : Module has found the home network and is registered.</i>

<stat>

- 0: not registered, MS is not currently searching for a new operator.
- 1: registered, home network.
- 2: not registered, MS currently searching for a base station.
- 4: unknown.
- 5: registered, roaming

13.13 Incoming Call +CRING

13.13.1 Description :

This unsolicited command indicates an incoming call. See +CRC, section 8.3 for information about enabling this result.

13.13.2 Syntax :

Response syntax : +CRING: <Type>

+CRING:VOICE	for normal voice calls
+CRING:DATA	for all types of data calls
+CRING:FAX	for all types of fax calls
+CRING:OTAPA	for OTAPA calls
+CRING:TEST	for markov, loopback, and test calls
+CRING:UNKNOWN	for unknown/undefined calls types

13.14 Automatic RxLev Indication +CSQ

13.14.1 Description :

This command indicates RSSI automatic shots when AT+CCED=1,8 is processed.

13.14.2 Syntax :

Response syntax : +CSQ: <rssi>,99

Example Result
+CSQ:29, 99
<i>Note : RSSI notification</i>

13.15 Incoming Call +RING

13.15.1 Description :

This unsolicited command indicates an incoming call.

13.15.2 Syntax :

Response syntax : +RING

Example Result
+RING +RING <i>Note : Incoming Call</i>

13.16 Call Answered +WANS

13.16.1 Description :

This unsolicited command indicates that an incoming voice call has been answered.

13.16.2 Syntax :

Response syntax : +WANS

Command	Possible responses
ATA	+RING OK +WANS <i>Note: Call answered</i> +WCNT:3

13.17 Call Connected +WCNT

13.17.1 Description :

This unsolicited command indicates that an incoming or outgoing voice call has been connected into a traffic channel state.

13.17.2 Syntax :

Response syntax : +WCNT: <so>

Command	Possible responses
ATD18005551212;	OK +WORG:18005551212 +WCNT:3 <i>Note: Call Connected with service option 3</i>

13.18 Call Ended +WEND

13.18.1 Description :

This unsolicited command indicates that a voice call or attempt to establish a voice call has ended.

13.18.2 Syntax :

Response syntax : +WEND: <reason>

Command	Possible responses
ATD18005551212; ATH	OK +WORG:18005551212 +WCNT:3 OK +WEND:10 <i>Note: Call Ended with a normal release</i>
ATD18005551212;	OK +WORG:18005551212 +WEND:3 <i>Note: Call failed because the signal faded.</i>

<reason>

- 0: Phone is offline
- 1: Phone is CDMA locked
- 2: Phone has no service
- 3: Call Faded/Dropped
- 4: Received Intercept from Base Station
- 5: Received Reorder from Base Station
- 6: Received a Release from Base Station (This is a normal call termination).
- 7: Service Option rejected by Base Station
- 8: Received Incoming Call
- 9: Received an alert stop from Base Station
- 10: Software ended the call (Normal release).
- 11: Received End Activation – OTASP calls only.
- 12: Internal Software aborted the origination/call.
- 13: NDSS failure (Network Directed System Selection, this is an IS-95B service)
- 14: Maximum Acces probes exhausted (The module failed to contact the Base Station)
- 16: RUIM not present
- 17: Origination already in progress
- 18: General Access Failure
- 19: Received retry order (IS-2000 only).

13.19 Feature Notification Message +WFNM

13.19.1 Description :

This unsolicited command displays a broadcast message that the carrier may send to all mobiles in an emergency. This event is required for CDMA specifications.

13.19.2 Syntax :

Response syntax : +WFNM="<message>"

Command	Possible responses
	+WFNM="Help, I have falling and I can't get up!"

13.20 Flash indication +WFSH

13.20.1 Description :

This unsolicited command confirms that a flash has been sent to the base station. See +WFSH command, section 7.5, for more information on using flash commands.

13.20.2 Syntax :

Response syntax : +WFSH

Command	Possible responses
AT+WFSH	OK +WFSH

13.21 Wavecom General Indicator +WIND

13.21.1 Description :

This unsolicited result gives general status indications.

13.21.2 Syntax :

Response syntax : +WIND: <event>

Example Result
+WIND:8
<i>Note : General indication that AT commands are ready to be accepted</i>

13.21.3 Defined values :

- <event>
- 0: Reserved
 - 1: Reserved
 - 2: Reserved
 - 4: Reserved
 - 8: Product is ready to process all AT commands
 - 16: Reserved
 - 32: Reserved
 - 64 : The network service is available for an emergency call.
 - 128: The network is lost.
 - 256: Reserved
 - 512: Reserved

13.22 Call Originated +WORG

13.22.1 Description :

This unsolicited command indicates that an attempt to establish a voice call has occurred.

13.22.2 Syntax :

Response syntax : +WORG:<number>

Command	Possible responses
ATD18005551212;	OK +WORG:18005551212 +WCNT:3 OK

Note: <number> is the dialing string sent to the base station. You may see extra numbers before the intended dialing string, this is a result of prepended numbers or other call options such as +CLIR.

13.23 Call Privacy indication +WPRV

13.23.1 Description :

This unsolicited command confirms that the call privacy level has changed during a call.

Syntax :

Response syntax : +WPRV: <prv>

Command	Possible responses
AT+WPRV=1	OK +WPRV: 1

<prv>

- 0: Indicates normal privacy
- 1: Indicates enhanced privacy

13.24 Roaming indication +WROM

13.24.1 Description :

This unsolicited command indicated roaming status has changed.

Syntax :

Response syntax : +WROM: <roam>

Command	Possible responses
	+WROM:1

<roam>

- 0: Home.
- 1: Roam Icon ON (affiliated network)
- 2: Roam Icon Blink (foreign network)

13.25 Current NAM Change +WNAME

13.25.1 Description :

This unsolicited command indicated the current NAM has changed.

Syntax :

Response syntax : +WNAME: <nam>

Command	Possible responses
	+WNAME:2

<nam>

- 1: NAM 1
- 2: NAM 2
- 3: NAM 3
- 4: NAM 4

13.26 Wavecom Voice Mail Indicator +WVMI

13.26.1 Description :

This unsolicited indication gives the status of the Voicemail Inbox.

13.26.2 Syntax :

Response syntax : +WVMI: <Lineld>,<Num>

Example Result
+WVMI:1,1
<i>Note : 1 Message waiting on Line 1</i>

13.26.3 Defined values :

<Lineld>

1: Line 1

<Num>

The number of messages waiting in the inbox.

0: No message waiting.

1: One message is waiting

3: Three messages are waiting

14 Appendices

14.1 MS error result code : +CME ERROR: <error>

<error>	Meaning	Resulting from the following commands
3	Operation not allowed	All GSM 07.07 commands (+CME ERROR: 3)
4	Operation not supported	All GSM 07.07 commands (+CME ERROR: 4)
5	PH-SIM PIN required (SIM lock)	All GSM 07.07 commands (+CME ERROR: 5)
10-23	Reserved	
24	Text string too long	+CPBW, +CPIN, +CPIN2, +CLCK, +CPWD
26	Dial string too long	+CPBW, ATD, +CCFC
30	No network service	+VTS, +COPS=?, +CLCK, +CCFC, +CCWA, +CUSD
32	Reserved	
40	Network personalization PIN required (Network lock)	All GSM 07.07 commands (+CME ERROR: 40)
41	Software resource not available	+WPRV, +CICB, +WFSH, +CCFC, +WNAM, +COPS, +WRMP
42	Invalid parameter	All commands
43	Non-Volatile Memory failure	All commands

14.2 Message service failure result code: +CMS ERROR : <er>

<er> is defined as below :

<er>	Meaning	Resulting from the following commands
1 to 127	Reserved	
301	Reserved	
302	Operation not allowed	All SMS commands (+CMSS, +CMGL, +CPMS...
303	Reserved	
304	Invalid PDU mode parameter	+CMGS, +CMGW
305	Invalid text mode parameter	+CMGS, +CMGW, +CMSS
310-318	Reserved	
321	Invalid memory index	+CMGR, +CMSS, +CMGD
322	Reserved	
330	Reserved	
341	Non Volatile Memory failure	All SMS commands

14.3 Specific error result codes

<error>	Meaning	Resulting from the following commands
500	unknown error.	All commands
512	Reserved	
513	Lower layer failure (for SMS)	+CMGS, +CMSS (+CMS ERROR: 513)
514-518	Reserved	
519	Reset the product to activate or change a new echo cancellation algo.	+ECHO, +VIP

14.4 Extended Error Report (+CEER) Call Processing codes

Cause value	Diagnostic
0	No error detected in call processing
1	No CDMA service detected
2	Module is in a call, operation not allowed
3	Module is not in a call, operation not allowed
4	Module is in an unknown call state
5	Call Barring is ON
6	Invalid or Not allowed CDMA Service Option
7	Invalid Parameter
8	Operation only allowed during an incoming call
9	Invalid Mode Selection
10	Invalid Roam Selection
11	Invalid Band Selection

14.5 Final result codes

Verbose result code	Numeric (V0 set)	Description
+CME ERROR: <err>	As verbose	Error from GSM 07.05 commands
+CMS ERROR: <err>	As verbose	Error from SMS commands (07.07)
BUSY	7	Busy signal detected
ERROR	4	Command not accepted
NO ANSWER	8	Connection completion timeout
NO CARRIER	3	Connection terminated
OK	0	Acknowledges correct execution of a command line
RING	2	Incoming call signal from network

14.6 Intermediate result codes

Verbose result code	Numeric (V0 set)	Description
+COLP :<number>,<type>	as verbose	Outgoing Call Presentation
+CR : <type>	as verbose	Outgoing Call report control
+ILRR: <rate>	as verbose	Local TA-TE data rate
CONNECT 300	10	Data connection at 300 bauds
CONNECT 1200	11	Data connection at 1200 bauds
CONNECT 1200/75	12	Data connection at 1200/75 bauds
CONNECT 2400	13	Data connection at 2400 bauds
CONNECT 4800	14	Data connection at 4800 bauds
CONNECT 9600	15	Data connection at 9600 bauds
CONNECT 14400	16	Data connection at 14400 bauds
+CSSI: <code1>[,<index>]	As verbose	Supplementary service notification during a call setup

15 APPENDIX A (informative)

This chapter gives illustrative examples of the general AT commands used for a communication.

15.1 Example 1: When the MS has already been powered on.

```
AT+CMEE=1      Enable the report mobile equipment errors
OK
AT+CPAS        Get the MS Status
+CPAS: 0      MS is ready to receive commands
OK
```

15.1.1 Examples where a voice call is originated.

Example 3 : When the MS is powered on.

```
AT+CMEE=1      Enable the reporting of mobile equipment errors
OK
ATD18001234567;      Make a voice call
OK                  ATD Command is being processed
+WORG:18001234567   Indication of call origination sent to the Base Station with dialing string 18001234567
+WCNT:3           Call Connected with CDMA Service Option 3, Traffic channel established.

Conversation...
ATH              Release the call
OK              ATH command is being processed
+WEND:10        Call Ended, end reason 10 (Normal Release).
```

15.1.2 Example with incoming calls

When the MS is powered on.

```
AT+CMEE=1      Enable the report mobile equipment errors
OK
AT+WIND=63     Ask to display the general indications.
OK
AT+CLIP=1      Enable the calling line identification presentation.
OK
AT+CNUM        Query own number.
+CNUM: "Phone","8585551212",129
OK
```

Call the number from another MS.

```
+RING          Incoming Call.
+CLIP: "8585551212",129  Identification of the remote party.
ATA           Answer the call.
OK           ATA command is being processed.
+WANS         Call has been answered.
+WCNT:3      Call Connected with CDMA Service Option 3, Traffic channel established.
...Conversation...
+WEND:6      Call Ended, end reason 6 (Normal Release), the call has been released by the remote party.
```

15.1.3 Example of a call waiting situation

When the MS is powered on.

AT+CMEE=1	Enable the report mobile equipment errors
OK	
ATD8585551212;	Make a voice call
OK	ATD Command is being processed
+WORG:8585551212	Indication of call origination sent to the Base Station with dialing string 18001234567
+WCNT:3	Call Connected with CDMA Service Option 3, Traffic channel established.
Conversation...	Conversation with first call.
+CCWA:"8582701234",129	Indication of another incoming call. You will also hear a beep sound in the ear piece.
AT+WFSH	Send a flash to the Base Station (toggle to the second call).
OK	AT command is being executed.
+WFSH	Flash sent to the Base Station. Call switches to the second call. However, this is not 100% guaranteed because the there is not confirmation from the Base Station.
Conversation...	Conversation with second call.
AT+WFSH	Send a flash to the Base Station (toggle to the second call).
OK	AT command is being executed.
+WFSH	Flash sent to the Base Station. Call switches to the first call. However, this is not 100% guaranteed because the there is not confirmation from the Base Station.
Conversation...	Conversation with first call.
.	
.	
repeat as necessary	
.	
.	
ATH	Release the all calls.
OK	ATH command is being executed.
+WEND:10	Calls End

15.2 Examples about short messages

15.2.1 Example 1: Receive a short message

AT+CNMI=2,1,1,1,0	SMS-DELIVERs are stored in NV, SMS-STATUS-REPORTs are routed to TE
OK	
AT+CMGF=1	Set text mode to send a Short Message
OK	
+CMTI:"MT",0	New message received. Message store in "MT" memory at index 0.
AT+CNMI=2,2,1,1,0	SMS-DELIVERs are routed to TE
+CMT:"8585551212","02/05/17,10 :43 :07",129,17	Received message.
Test SMS Message	
AT+CNMA	Acknowledge the received message to the network.
OK	

15.2.2 Example 2: Send a short message

AT+CNMI=2,1,1,1,0	SMS-DELIVERs are stored in NV, SMS-STATUS-REPORTs are routed to TE
OK	
AT+CMGF=1	Set text mode to send a Short Message

OK

AT+CMGS="8585551212"

Send a SMS-SUBMIT to mobile phone
Product sends a 4 characters sequence: 0x0D 0x0A 0x3E 0x20
Edit first line and press carriage return (<CR>, 0x0D)
Edit last line and send message by pressing <ctrl-Z> (0x1A)

This is the first text line
This is the last text line

+CMGS: 1

Success: message reference 1 is returned from the SMS Service Center

+CDS:2,1,"8582431439",129,"02/05/17,10:14:17","02/05/17,10:14:27",32768

Success: report of successful message delivery received. Time of sending of the message and receiving of the acknowledgment from the SMS Service Center is reported, along with the status code.

15.2.3 Example 3: Read short messages

AT+CMGF=1

Set text mode to read Short Messages

OK

AT+CPMS="MT"

Set Mobile Terminated as preferred memory storage

OK

+CPMS:2,10,1,10

Currently there are 2 MT messages and 1 MO messages stored.

AT+CMGL="ALL"

List all stored messages

OK

+CMGL:0,"REC READ","8585551111",
Test message #1

+CMGL:1,"REC UNREAD","8585552222",
Test message #2

+CMGL:0,"STO UNSENT","8585551212",
Test message to be sent.

AT+CMGR=1

Read the first message in currently selected memory
storage (previously set by AT+CPMS).

OK

+CMGR:"REC UNREAD","8585552222","02/05/15,15:54:04",
Test message #2

16 APPENDIX (standard): TIA/EIA/IS-707.3

This appendix describes the AT commands specified in the TIA/EIA/IS-707.3 and implemented in WISMOQ CDMA module. Please refer to the attached document for the detail.
