1. Introduction

1.1. <u>Scope</u>

This document describes the interfaces and the technical specifications for the integrated modem called WMOi3.

2. Generality

2.1. Overview

The integrated modem is a product with a sole connector which puts together all the interface signals in order to facilitate its integration.

It has an integrated SIM connector as well as a standard RF connector type MMCX (Miniature Micro Connector).

2.2. Physical caracteristics

The WMOI3 integrated modem has a complete self-contained shield.

The physical characteristics are the following ones:

| Physical characteristic | Qualification |
|----------------------------|-----------------------|
| Dimension | 46 x64 x 12.4 |
| Absolute maximum dimension | mm |
| Weight | About 80 g |
| Volume | 36.21 cm ³ |
| Case | Zamack + |
| | stainless steel |

2.3. Integrated modem design

* For technical drawing see Annexe A

3. Interfaces description

3.1. The main connector

This is a 50 pins interface connector with a pitch of 1.27 from SAMTEC, referenced **FTS-125-01-L-DV.** (see figure1)

| Figure 1 | : 50 | pins | connector | Bottom view |
|----------|------|------|-----------|-------------|
| | | | | |

| GND | -2 | 1 GND |

The following table describes the electrical characteristics of the interface.

Some signals require particular connections and are specified in bold characters.

| Pin # | Name | I/O | I/O type | Description | Comment |
|-------|-------------|-----|----------|----------------------------------|---|
| 1 | GND | | | GROUND | High current |
| 2 | GND | | | GROUND | High current |
| 3 | +5V | I | Supply | | High current |
| 4 | +5V | | Supply | | High current |
| 5 | CT109/DCD | 0 | CMOS/2X | RS232-Data Carrier Detect | |
| 6 | GND | | | GROUND | High current |
| 7 | GPIO2 | I/O | CMOS/2X | General Purpose I/O | |
| 8 | SPK2N | 0 | Analog | Speaker2 negative output | |

| 43 | SPI_IO | I/O | 1X | I ² C Data or SPI Data | |
| 44 | SPI_CLK | 0 | 1X | I ² C Clock or SPI Clock | |
| 45 | SIMCLK | 0 | 2X | Clock for SIM Interface | 3V mode |
| 46 | SIMRST | 0 | 2X | Reset for SIM interface | 3V mode |
| 47 | SIMVCC | 0 | | SIM card supply | 3V mode |
| | | | | | 6mA max |
| 48 | SIMPRES1 | I | | SIM card detect | Connected to SIM |
| | | | | | connector pin 8. |
| | | | | | Pin 4 of SIM |
| | | | | | connector must be |
| | | | | | pulled down to |
| | | | | | GND with 1 K Ω |
| 49 | SIMDATA | I/O | 3X | I/O for SIM interface | 3V mode |
| 50 | GND | | | GROUND | High current |

Nota : VCC could be either 3V or 5V.

All digital I/O are CMOS 3V compatible.

| Parameter | I/O type | Min | Max | Condition |
|-----------------|----------|-------|------|--------------------------|
| VIL | CMOS | -0.5V | 0.8V | |
| VIH | CMOS | 2.1V | 3.0V | |
| V _{OL} | 1X | | 0.2V | I _{OL} = -1 mA |
| | 2X | | 0.2V | $I_{OL} = -2 \text{ mA}$ |
| | 3X | | 0.2V | $I_{OL} = -3 \text{ mA}$ |
| V _{OH} | 1X | 2.6V | | I _{ОН} = 1 mA |
| | 2X | 2.6V | | $I_{OH} = 2 \text{ mA}$ |
| | 3X | 2.6V | | $I_{OH} = 3 \text{ mA}$ |

Operating conditions

3.2. Pin Description

3.2.1. Power supply

The main power supply will be provided through a double connection.

These connections are respectively the pin 3 and 4 for the +5V and the pins 1 and 2 for the ground (GND).

The power supply is 5V + -5% 1A.

3.2.2. Serial Link RS232

This interface is needed for communication with a remote terminal with respect to the RS232 V.28 standard levels. As the integrated modem does not include a transceiver MAX3238 or MAX3237, this one has to be added outside with a SUBD9. The connection between the WMOi3 and the transceiver must not exceed 10 cm. The table below lists the needed signals for this interface :

| PIN number | Signal | Description | | |
|------------|--------|---------------------|--|--|
| 5 | DCD | Data Carrier Detect | | |
| 28 | RX | Reception | | |
| 25 | TX | Transmission | | |
| 29 | DTR | Data Terminal Ready | | |
| 27 | DSR | Data Set Ready | | |
| 30 | RTS | Request To Send | | |
| 13 | CTS | Clear To Send | | |
| 9 | RING | Ring indicator | | |
| 2 | GND | Ğround | | |

When the RS232 V.28 level is not needed, the above signals can be used as TTL 3V CMOS compatible signals.

Application example needing V.28 levels :

3.2.3. <u>Remote SIM interface</u>

A SIM connector is already integrated on the integrated modem (see 3.3 SIM interface). However there is the possibility to implement a remote SIM connector using the signals described in the table below.

| PIN number | Signal |
|------------|---------|
| 47 | SIMVCC |
| 46 | SIMRST |
| 45 | SIMCLK |
| 50 | GND |
| 49 | SIMDATA |
| 48 | SIMPRES |

3.2.4. <u>AUDIO</u>

The modem allows the connection of a handset or a headset through AUDIO signals

The audio end stage must respects the following specifications :

3.2.4.1. Microphone 2

The MIC2 inputs are differential ones. They already include the convenient biasing for an electret microphone (0,5 mA and 2 Volts). This electret microphone can be directly connected on these inputs. The impedance of the microphone 2 has to be around $2k\Omega$. These inputs are the standard ones for an handset design while MIC1 inputs can be connected to an external headset or a handsfree kit.

The gain of MIC2 inputs is internally adjusted. The gain can be tuned from 30dB to 51dB. The connexion to the microphone is direct.

| Signal | Pin # | I/O | I/O type | Description |
|--------|-------|-----|----------|-----------------------------|
| MIC2P | 16 | I | Analog | Microphone 2 positive input |
| MIC2N | 18 | | Analog | Microphone 2 negative input |

Pin description

This confidential document is the property of WAVECOM and may not be copied without a written authorization

3.2.4.2. Microphone 1

The MIC1 inputs are differential and do not include internal bias. To use these inputs with an electret microphone, bias has to be generated outside the WMOI3 modem according to the characteristic of this electret microphone. These inputs are the standard ones used for an external headset or a handsfree kit. The connection can be either differential or single-ended but <u>using a differential connection in order</u> to reject common mode noise and TDMA noise is recommended. When using a single-ended connection, be sure to have a very good ground plane, a very good filtering as well as shielding in order to avoid any disturbance on the audio path.

The gain of MIC1 inputs is internally adjusted. The gain can be tuned from 30dB to 51dB.

| Signal | Pin # | I/O | I/O type | Description |
|--------|-------|-----|----------|-----------------------------|
| MIC1P | 20 | I | Analog | Microphone 1 positive input |
| MIC1N | 22 | I | Analog | Microphone 1 negative input |

Pin description

3.2.4.3. Speaker 2

Speaker outputs SPK2 are push-pull amplifiers and can be loaded down to 50 Ohms and up to 1nF. These outputs are differential and the output power can be adjusted by step of 2dB. The output can be directly connected to a speaker.

The connection can be differential or single-ended <u>but using a</u> <u>differential connection to reject common mode noise and TDMA noise</u> <u>is recommended</u>. When using a single-ended connection, be sure to have a very good ground plane, a very good filtering as well as shielding in order to avoid any disturbance on the audio path.

Pin description

| Signal | Pin # | I/O | I/O type | Description |
|--------|-------|-----|----------|---------------------------|
| SPK2P | 10 | 0 | Analog | Speaker 2 positive output |
| SPK2N | 8 | 0 | Analog | Speaker 2 negative output |

3.2.4.4. Speaker 1

Speaker outputs SPK1 are push-pull amplifiers and can be loaded down to 50 Ohms and up to 1nF. These outputs are differential and the output power can be adjusted by step of 2dB. The output can be directly connected to a speaker.

The connection can be differential or single-ended <u>but using a</u> <u>differential connection to reject common mode noise and TDMA noise</u> <u>is recommended.</u> When using a single-ended connection, be sure to have a very good ground plane, a very good filtering as well as a shielding in order to avoid any disturbance on the audio path.

Pin description

| Signal | Pin # | I/O | I/O type | Description |
|--------|-------|-----|----------|---------------------------|
| SPK1P | 12 | 0 | Analog | Speaker 1 positive output |
| SPK1N | 14 | 0 | Analog | Speaker 1 negative output |

15

3.3. SIM Interface

The provided SIM connector has been designed for 3V technology SIMs only. The remote Sim connectormust be placed at 10cm max. from the WMOi3.

3.4. <u>RF interface</u>

The RF connector is MMCX (Miniature Micro Connector) standard type for a surface mounting.

An antenna can be directly connected through the matting connector or using a small MMCX / SMA adaptor.

| | EGSM | DCS | | |
|--------------|----------------|------------------|--|--|
| Frequency RX | 925 to 960 MHz | 1805 to 1880 MHz | | |
| Frequency TX | 880 to 915 MHz | 1710 to 1785 MHz | | |
| Impedance | 50 Ω | | | |

The antenna must comply with the following specifications :

4. Connectors

4.1. Interface connector

The main connector is a 50 pins interface connector from SAMTEC, referenced FTS-125-01-L-DV (see 3.1).....

4.2. <u>RF connector</u>

The standard RF connector is a MMCX type (Miniature Micro Connector).....
