## Cautions

This Development Kit Q26 integrates a modular transmitter. This device is to be used only for mobile and fixed applications.

The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. The antenna(s) used for this transmitter must not exceed a gain of 3 dBi for mobile operation and 7 dBi for fixed operation.

Users and OEM integrators must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance. OEM must also be provided with labelling instructions.

This device contains GSM and GPRS functions that are not operational in U.S. territories. This filing is applicable for GSM850 MHz, E-GSM900 MHz, DCS1800 MHz and PCS1900 MHz operations. And GPRS class 10.

Information provided herein by Wavecom is accurate and reliable. However no responsibility is assumed for its use.

General information about Wavecom and its range of products is available at the following internet address: <http://www.wavecom.com>

## Overview

This document is a description of the Development Kit for WISMO Quik Q26 Series module based on a mother board V2 Ref. WM0402301-111-20.

This Development Kit is an equipment which can be used to start software and hardware development based on WISMO Quik Q26 Series module .

Refer to the documentation of the WISMO Quik Q268x Series module for further information.

# 1 Development Kit Q26 description

Refer to implementation.pdf file for further information about the component designation.

## 2 General description

### 2.1 Development Kit Q26

All functions of the Development Kit Q26 are provided by the WISMO Quik Q26 Series module.

Interfaces on board:

- 1 external connector and TP to access all signals of WISMO Quik Q26 Series module
- Main serial link RS232, UART1\* with full signals
- Ring Indicator
- Auxiliary serial link RS232, UART2\* with 4 signals
- Slave USB\* 1.1
- SIM\* 1.8/3v with gestion of Sim presence
- 6-button Keypad
- 2 AUDIO\* connectors (AUDIO 1, AUDIO 2)
- LEDs for several indications
- RESET Pushbutton
- Power supply connectors
- ON/OFF switch
- BOOT switch
- Buzzer LED
- Flash LED (for network presence)
- Charger LED

\*The particularity of the Development Kit Q26 it is that each signals peripheral can be electrically removed independently via special solder. (cf § 2.2).

## 2.2 Special solder

The PCB print is used for the peripherals that are electrically removable.

To connect signals between the WISMO module and the dedicated connector on the Development Kit Q26, solder these PCB print.

To connect signals between the WISMO module and the external board connector (J201) it is recommended not to solder these PCB print. (i.e. prototyped a daughter board)

These interfaces are electrically removable via the "special solder":

- UART1 (from J402 to J409)
- UART2 (from J501 to J504)
- AUDIO1 (from J602 to J605)
- AUDIO2 (from J606 to J609)
- SIM (from J701 to J705)
- USB (from J801 to J803, signals plus power)
- Power supply of Development Kit (from J103, all components except the WISMO module).

## 2.3 RoHS compliance

The Q26 module is now compliant with RoHS (Restriction of Hazardous Substances in Electrical and Electronic Equipment) Directive 2002/95/EC which sets limits for the use of certain restricted hazardous substances. This directive states that "from 1st July 2006, new electrical and electronic equipment put on the market does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE)".

Modules which are compliant with this directive are identified by the RoHS logo on their label.

### 3 External board connector (J201) description

#### 3.1 WISMO Quik Q2686 signals

All signals of the WISMO module are connected to the external board connector (J201). and are available via TP on the center of Development Kit Q26. The pinouts of J201 connector are listing below.

For further information about the WISMO Quik Q2686 signals and multiplexing, refer to document [2].

#### 3.2 External board connector (J201)

Pin #	Name	I/O*	I/O type	Description
1	VBATT	I	Supply	Battery Input
2	VBATT	I	Supply	Battery Input
3	CHG-IN	I	Supply	Current source input
4	CHG-IN	I	Supply	Current source input
5	VCC_1V8	O	Supply	1.8V digital supply output

Figure 2: Pin out of the external board connector (J201)

\*According to WISMO view.

## 4 Power supply

There are at choice two power supply for starting the Development Kit Q26. These power supplies are protected by a transient voltage suppressor.

- External supply in DC (via J100).
- Sector adaptor AC/DC (via J101).

Each of these power supply are used for the WISMO module AND the peripherals on the Development Kit Q26.

It is possible to dissociate the power supply for the WISMO module ("VBATT", measurable via the TP153) and for the peripherals ("VBAT", measurable via the TP157).

Figure 10: Zoom on "J103"

A measure of current is possible between the VBATT and VBAT via J103 (cf § 17).

### 4.1 LED signalization ("VBAT")

"VBAT" indicator is a green LED. It signalizes the external power supply presence. In other words, peripherals AND WISMO Quik Q268x Series module are respectively powered via VBAT and VBATT.

So the Development Kit Q26 is operational.

LED	VBATT	VBAT
Light ON	ON	ON
Light OFF	Can be ON*	OFF

Figure 10: LED of "VBAT"

\* If the special solder, J103, is not soldered and external power supply is plugged in.

## 4.2 External supply

The J100 connector has three contacts. This is **J100:1-2** who provide the power supply.

For J100:2-3 cf §4.2.1.

Figure 11: Power supply voltage

(1) : This value has to be guaranteed during the burst (with 2.0A Peak in GSM or GPRS mode)

(2) : max operating Voltage Stationary Wave Ratio (VSWR) 2:1

### 4.2.1 BAT-TEMP

This signal is an input (ADC) in the WISMO module.

Also J100:2-3 allows simulating the temperature level from a sensor inside the battery.

	V <sub>MIN</sub>	V <sub>NOM</sub>	V <sub>MAX</sub>
BAT-TEMP	0	-	2v

Figure 12: Electrical Characteristics

The divisor bridge with R100, R101 is not finalized (cf doc[2]).

### 4.3 Sector adaptator

The J101 connector allows to power the Development Kit Q26 from AC power supply cable.

The only supported reference is:

Manufacturer	Reference
SINPRO	SPU12C-101

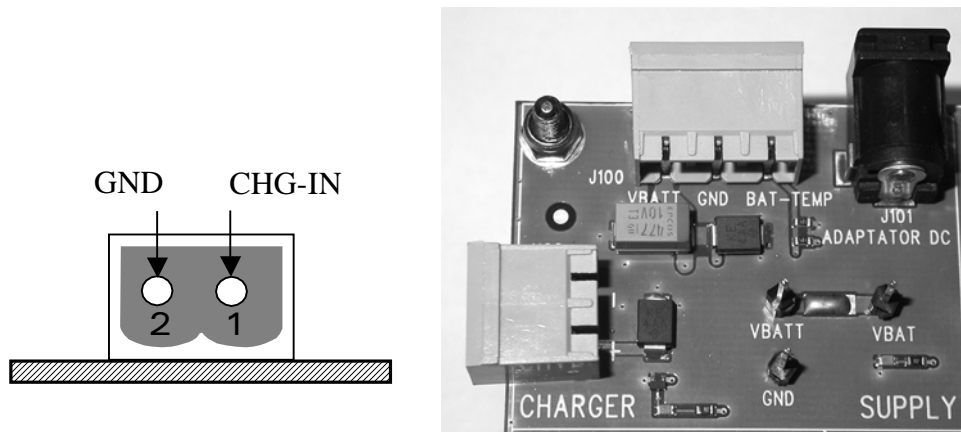

Figure 12: Sector adaptator reference

## 5 Charger supply & LED

### 5.1 Charger supply

The J102 is used to simulate a charger.

This power supply is protected by a transient voltage suppressor.

	$V_{MIN}$	$V_{NOM}$	$V_{MAX}$
CHG-IN Voltage (for $I=I_{max}$ )	4.6*v		6v

Figure 13: Power supply voltage

\* To be parametrized as per battery manufacturer

### 5.2 LED signalization ("CHARGER")

"CHARGER" indicator is a red LED controlled by the signal CHARGER-LED provided by the WISMO module. It is the GPIO0.

This LED indicates (via software) if a charger (power supply into J102) has been seeing by the WISMO module.

## 6 Flash LED ("FLASH-LED")

When  $2.8V < V_{BATT} < 3.2V$  and the charger is connected:

- the green LED "FLASH-LED" flashes
- the pre-charging phase of the battery starts
- a current generator is connected to the CHARGER connector (J102).

## 7 Buzzer LED ("BUZZ-OUT")

"BUZZ-OUT" indicator is a yellow LED controlled by the signal with the same name provided by the WISMO module. It is driven by the PWM signal (open drain).

## 8 Control functions

Figure 14: Switches configuration

### 8.1 ON/~OFF

Once the Development Kit Q26 is supplied by the external source (via J100 or J101), the ON/~OFF switch provides the VBATT to the module when it is pushed to "ON".

After 1 second it can be switched off. (cf doc [2] and doc [3]).

### 8.2 ~RESET

The pushbutton ~RESET starts a general reset when it is pushed.

A Operating System reset will be preferred to a HW reset.

### 8.3 BOOT

The BOOT switch is only used for downloading new software to the module via UART1 with the Wavecom software "DWLWin".

It must be on "OFF" position.

Mode	BOOT	ON/~OFF
Normal	OFF	ON
Backup download With „DWLWin“	ON	ON

Figure 15: BOOT configuration

## 9 Keypad function

Only 6 keypads are connected on the Development Kit Q26.

The following table shows the matrix of the keyboard:

	COL0	COL1	COL2	COL3	COL4
ROW0	SW300	-	-	-	-
ROW1	-	SW301	-	-	-
ROW2	-	-	SW302	-	-
ROW3	-	-	-	SW303	SW304
ROW4	-	-	-	-	SW305

Figure 16: Matrix of the keyboard

Example: If you press the key SW300, an electric detection will be made on ROW0 and COL0.

## 10 UART1 function

The UART1 function is the main RS232 serial link of WISMO module in 2.8v.

This function can be electrically detached with special solder not soldered (from J402 to J409).

For example if you want use this signals via the external connector (J201) without perturbed these.

By default, the UART1 is available on its dedicated connector J400 (with from J402 to J409 soldered).

### 10.1 UART1 connector (J400)

J400 is a SUB-D 9-pin female connector. The Table bellow gives the description of the signals of this connector.

Pin Number	Signal Name	I/O	I/O Type	Description
1	CT109 DCD	O	RS232 (V24/V28)	Data Carrier Detect
2	CT104 RXD	O	RS232 (V24/V28)	Receive serial data
3	CT103 TXD	I	RS232 (V24/V28)	Transmit serial data
4	CT108-2 DTR	I	RS232 (V24/V28)	Data Terminal Ready
5	GND			Ground

6	CT107 DSR	O	RS232 (V24/V28)	Data Set Ready
7	CT105 RTS	I	RS232 (V24/V28)	Request To Send
8	CT106 CTS	O	RS232 (V24/V28)	Clear To Send
9	CT125 RI	O	RS232 (V24/V28)	Ring Indicator

Figure 3: Pin out of the UART1 connector

## 10.2 Configuration of the UART1

The Development Kit Q26 acts as a DCE (Data Communication Equipment) and is connected to a DTE (Data Terminal Equipment - PC or terminal) with a "straight cable".

This is a full UART.

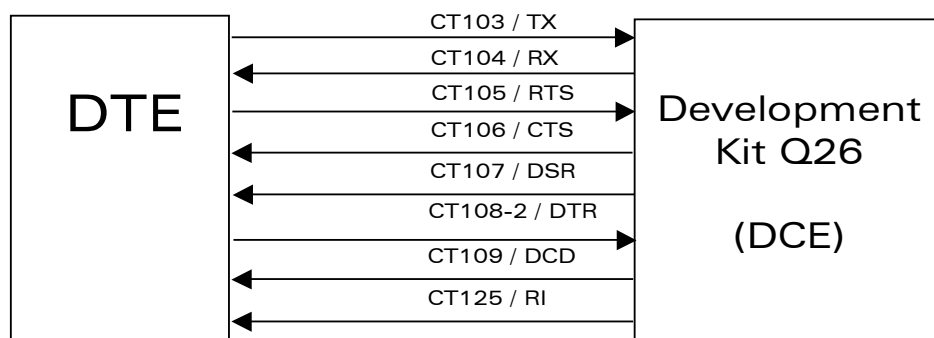

Figure 17: RS232 main serial link

### 10.3 Enable UART1 (“EN1/GPIO19”)

A switch “EN1/GPIO19” can drive the shutdown mode of the RS232 transceiver.

By default the RS232 transceiver is in active mode. (switch to “EN1”). In the other case (switch to “GPIO19”) this is this GPIO who drive the shutdown mode.

Switch “EN1/GPIO19”		UART1	LED “EN1”
EN1		ON (in hardware)	LIGHTS
GPIO1 9	0L	ON	LIGHTS
	1L	OFF	EXTINCT

Figure 18: Enable UART1 configuration

### 10.4 LED signalization

#### 10.4.1 LED “RING INDICATOR”

“RING INDICATOR” indicator is a yellow LED controlled by the ~CT125-RI1/GPIO42 signal provided by the WISMO module.

It is possible to active a « visual » mode with Command AT (AT+WRIM=0, cf doc.[3]). And when there is an incoming call, this signal is low and high all 0.5sec.

So the “RING INDICATOR” LED blinking.

#### 10.4.2 LED “EN1”

“EN1” indicator is a green LED controlled by the EN1 or GPIO19 signals provided by the WISMO module.

LED “EN1” lights when the RS232 transceiver is operational (cf configuration in Figure 18)

## 11 UART2 function

The UART2 function is the auxiliary RS232 serial link of WISMO module in 1.8v.

A regulator provides the 1.8v from VBAT (VBAT available for peripherals).

This function can be electrically detached with special solder not soldered (from J501 to J504).

For example if you want use this signals via the external connector (J201) without perturbed these.

By default, the UART2 is available on its dedicated connector J500 (with from J501 to J504 soldered).

### 11.1 UART2 connector (J500)

J500 is a SUB-D 9-pin female connector. The Table bellow gives the description of the signals of this connector.

Pin Number	Signal Name	I/O	I/O Type	Description
1	Not used*	-	-	-
2	CT104 RXD	O	RS232 (V24/V28)	Receive serial data
3	CT103 TXD	I	RS232 (V24/V28)	Transmit serial data
4	Not used*	-	-	-
5	GND			Ground
6	Not used*	-	-	-

7	CT105 RTS	I	RS232 (V24/V28)	Request To Send
8	CT106 CTS	O	RS232 (V24/V28)	Clear To Send
9	Not used*	-	-	-

Figure 4: Pin out of the UART2 connector

\*Only these 4 signals are used.

### 11.2 Configuration of the UART2

The Development Kit Q26 acts as a DCE (Data Communication Equipment) and is connected to a DTE (Data Terminal Equipment - PC or terminal) with a "straight cable".

There are only 4 signals on the UART2.

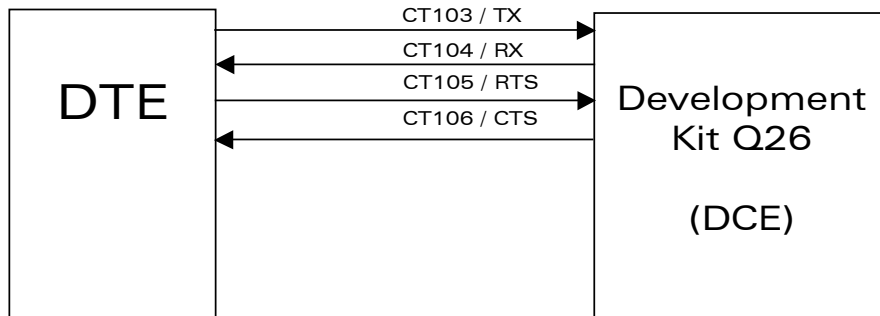

Figure 19: RS232 auxiliary serial link

### 11.3 Enable UART2 ("EN2/GPIO1")

A switch "EN2/GPIO1" can drive the shutdown mode of the RS232 transceiver.

By default the RS232 transceiver is in active mode. (switch to "EN2"). In the other case (switch to "GPIO1") this is this GPIO who drive the shutdown mode.

Switch "EN2/GPIO1"		UART2	LED "EN2"
EN2		ON (in hardware)	LIGHTS
GPIO1	1L	ON	LIGHTS
	0L	OFF	EXTINCT

Figure 20: Enable UART2 configuration

## 11.4 LED signalization ("EN2")

"EN2" indicator is a green LED controlled by the EN2 or GPIO1 signals provided by the WISMO module.

LED "EN2" lights when the RS232 transceiver is operational (cf configuration in Figure 20).

## 12 SIM function

### 12.1 SIM connector (J700)

J700 is a standard 1V8 or 3V SIM socket.

The Table below gives the description of the signals of this connector.

Pin Number	Signal Name	I/O	I/O Type	Description	Comment
1	SIM-VCC	O	1V8 or 2V9	SIM Power Supply	
2	SIM-RST	O	1V8 or 2V9	SIM Reset	
3	SIM-CLK	O	1V8 or 2V9	SIM Clock	
4	SIMPRES	I	1V8 max.(*)	SIM Card Detect	Multiplexed with GPIO18
5	GND			Ground	
6	VPP		Not connected		
7	SIM_DATA	I/O	1V8 or 2V9	SIM Data	
8	CC8		1V8	SIMPRES signal supply	

Figure 7: Pin out of the SIM connector

(\*) For either 1V8 or 3V SIM cards.

The SIM interface controls 2.9V and 1.8V SIM cards.

ESD protections are used on the 5 SIM signals

This function can be electrically detached with special solder not soldered (from J701 to J705).

For example if you want use this signals via the external connector (J201) without perturbed these.

By default, the SIM signals are available on its dedicated connector J700 (with from J701 to J705 soldered).

There is an option on the SIMPRES. If the SIMPRES signal is used by the application (detection of SIM card presence by the SIM socket), the "SIMPRES" switch must move to "SIMPRES" (contact 1-2 used).

Else for simulate all the time the SIM card presence (without the SIM socket) the "SIMPRES" switch must move to other side (contact 2-3 used).

Switch	SIM card presence
"SIMPRES"	
SIMPRES	Depend of the real SIM presence
Other side	Simulate a SIM presence

Figure 21: SIMPRES configuration

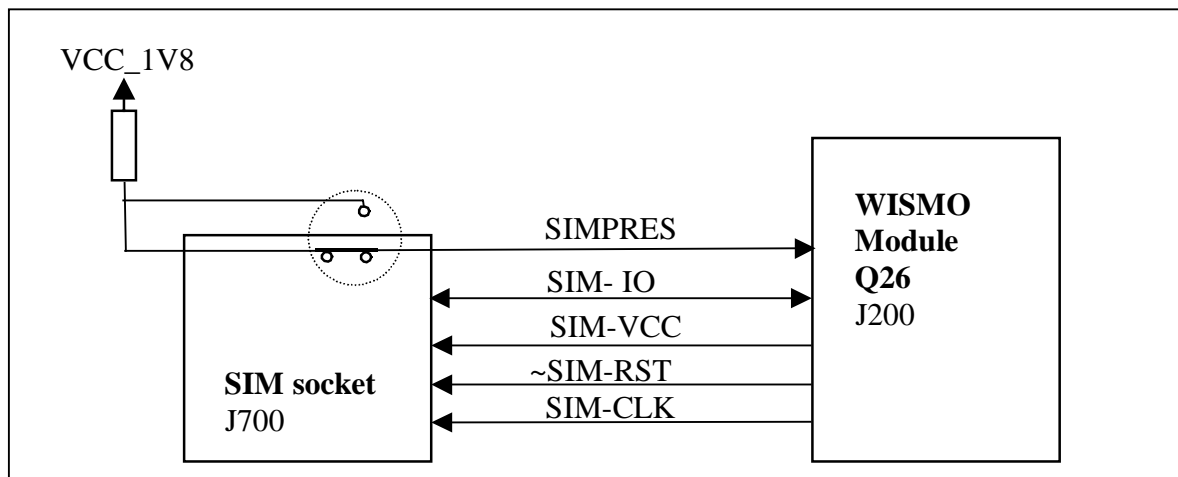

Figure 22: Schematic of switch "SIMPRES"

## 13 USB function

ESD protections are used on the 2 USB signals.

This function can be electrically removed with special solder not soldered (from J801 to J803).

For example if you want use this signals via the external connector (J201) without perturbed these.

By default, the USB signals are available on its dedicated connector J800 (from J801 to J803). soldered).

### 13.1 USB connector (J800)

J800 is a USB Series type B receptacle.

Pin Number	Signal Name	I/O	I/O Type	Description
1	VBUS	I	Power supply	+ 5 VDC
2	DM	I/O	Digital	USB negative line
3	DP	I/O	Digital	USB positive line
4	GND		Power supply	Ground
Shell	Shielding			

Figure 8: Pin out of the USB connector

### 13.2 LED signalization (“VPAD-USB”)

“VPAD-USB” indicator is a green LED controlled by the presence of VBUS (when the plug is in the USB connector).

The power supply for the USB interface in the WISMO module is providing from the USB connector.

If a USB cable is plugged the LED light and VPAD-USB (the output of a regulator (LDO)) is to 3.3v.

But the special solder (J803) must be soldered for to power the USB interface in the WISMO module. So by default J803 is soldered.

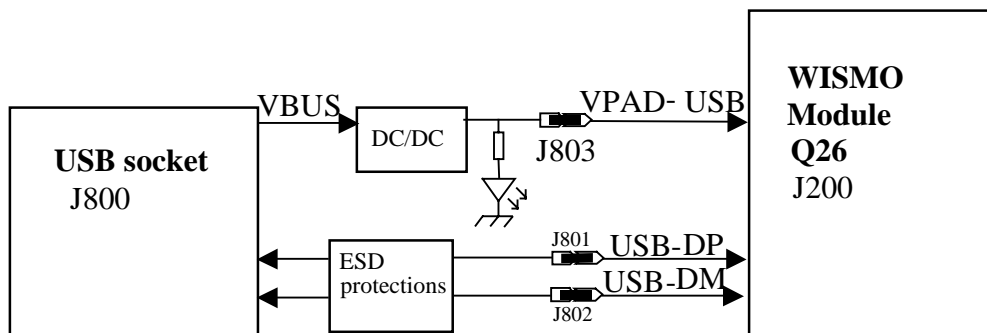

Figure 23: USB schematic

## 14 AUDIO functions

There are 2 AUDIO interfaces in the WISMO module.

### 14.1 AUDIO1 connector (J601)

J601 is a RJ9 4-pin connector.

The Table bellow gives the description of the signals of this connector.

Pin Number	Signal Name	I/O	I/O Type	Description
1	MIC1N	I	Analog	Auxiliary microphone negative input
2	SPK1N	O	Analog	Auxiliary speaker negative output
3	SPK1P	O	Analog	Auxiliary speaker positive output
4	MIC1P	I	Analog	Auxiliary microphone positive input

Figure 5: Pin out of the AUDIO1 connector

## 14.2 AUDIO2 connector (J600)

J600 is a RJ9 4-pin connector.

The Table bellow gives the description of the signals of this connector.

Pin Number	Signal Name	I/O	I/O Type	Description
1	MIC2N	I	Analog	Main microphone negative input
2	SPK2N	O	Analog	Main speaker negative output
3	SPK2P	O	Analog	Main speaker positive output
4	MIC2P	I	Analog	Main microphone positive input

Figure 6: Pin out of the AUDIO2 connector

## 14.3 Audio functions description

These functions can be electrically removed with special solder not soldered (from J602 to J609).

For example if you want use this signals via the external connector (J201) without perturbed these.

By default, AUDIO signals are available on its dedicated connector J601 (for AUDIO1), and J600 (for AUDIO2) (from J602 to J609 soldered).

The microphone inputs of AUDIO2 already include the biasing for an electret microphone allowing an easy connection.

The microphone inputs of AUDIO1 needs to have an external biasing if an electret micro is used.

The Main Audio is named "AUDIO2".

The Auxiliary Audio is named "AUDIO1".

Mode	Single ended	Differential
AUDIO2	NO	YES
AUDIO1	YES	NO

Figure 24: AUDIO configuration

## 15 Antenna function

The antenna is connected to the board via the SMA connector.

The antenna cable is fitted with a FME connector. An SMA/FME adaptor is supplied to permit the connection to the board.

### 15.1 RF connectors (P200+J202)

Pin Number	Signal Name	I/O	I/O Type	Description
1	ANT		RF 50 $\Omega$	RF signal
2, 3	GND			Ground

Figure 9: Pin out of the RF connector

#### WARNING

Be careful with the IMP connector. It is only made for 20 mating and unmating.

## 16 ESD functions

External ESD protections are added on the Development Kit Q26 for the following signals:

- SIM interface signals: SIMPRES, SIM-VCC, SIM-IO, SIM-CLK, SIM-RST.
- USB interface signals: USB-DP, USB-DM.

The others interfaces signals are protected in interne:

- UART1 signals with the ADM3307 transceiver ( $\pm 15\text{kV}$ ).
- UART2 signals with the LTC2804 transceiver ( $\pm 10\text{kV}$ ).
- AUDIO1 and AUDIO2 ( $\pm 15\text{kV}$ ).

## 17 Measures of courant

For the measure of courant consumed from the WISMO module see the figure 25.

Procedure:

- Remove R203
- Connect "VBATT" with "VCC\_2V8"
- Do not solder the "special solder", J103.
- Plug an external power supply (2.8V) on "VBATT"(+), and (GND ) on "GND"(-).

The current consumed by VBATT is ONLY current consumed by the module. (You can use all peripherals).

**NOTE:** No power supply during the work. Use pewter and a soldering iron (ref.WS80 from Weller or similar) to solder.

Figure 25: Configuration for the measure of courant

## 18 Starting procedure

### 18.1 Unpacking the Development Kit Q26 components

There is in the Quik WISMO box:

- 1 Development Kit Q26.
- 1 WISMO Quik Q2686 module soldered. (and 1 free).
- 1 SMA/FME antenna connector.
- 1 Power supply connector (3 pins).
- 1 Adaptator AC/DC.
- 1 RS232 cable.
- 1 USB cable.
- 1 handset.
- 1 RJ9 cable (for handset).
- 1 CDROM with all specifications inside.

Refer to doc [4] for communicate between the PC and the WISMO module Q2686.

## 18.2 Setting the accessories

Follow the instructions below step by step.

- Insert a SIM card into the SIM card holder, J700 (if communications are required).

- Make sure that:
  - The "ON/OFF" switch is on position "ON".
  - The "BOOT" switch is on position "OFF".

- Also make sure that:
  - The UART1 switch is on "EN1" position.
  - The UART2 switch is on "EN2" position.
  - The SIM switch is on "SIMPRES" position.
  - The all specials solders are soldered.

- Connect the RS232 cable, provided with the Development Kit Q268x, between PC port and **J400** of the board. (baud rate by default is 115.2 kbps,8N1)

- Connect the antenna to the **SMA** connector (J202), (if communications are required).

- Connect the handset, provided with the Development Kit Q268x, to the Main Audio connector **J600** (if communications are required).

### 18.3 Power supply

- Plug the power supply (via the adaptor DC (J101) or external power supply, 4V/2.5A (J100)).

### 18.4 Communication test

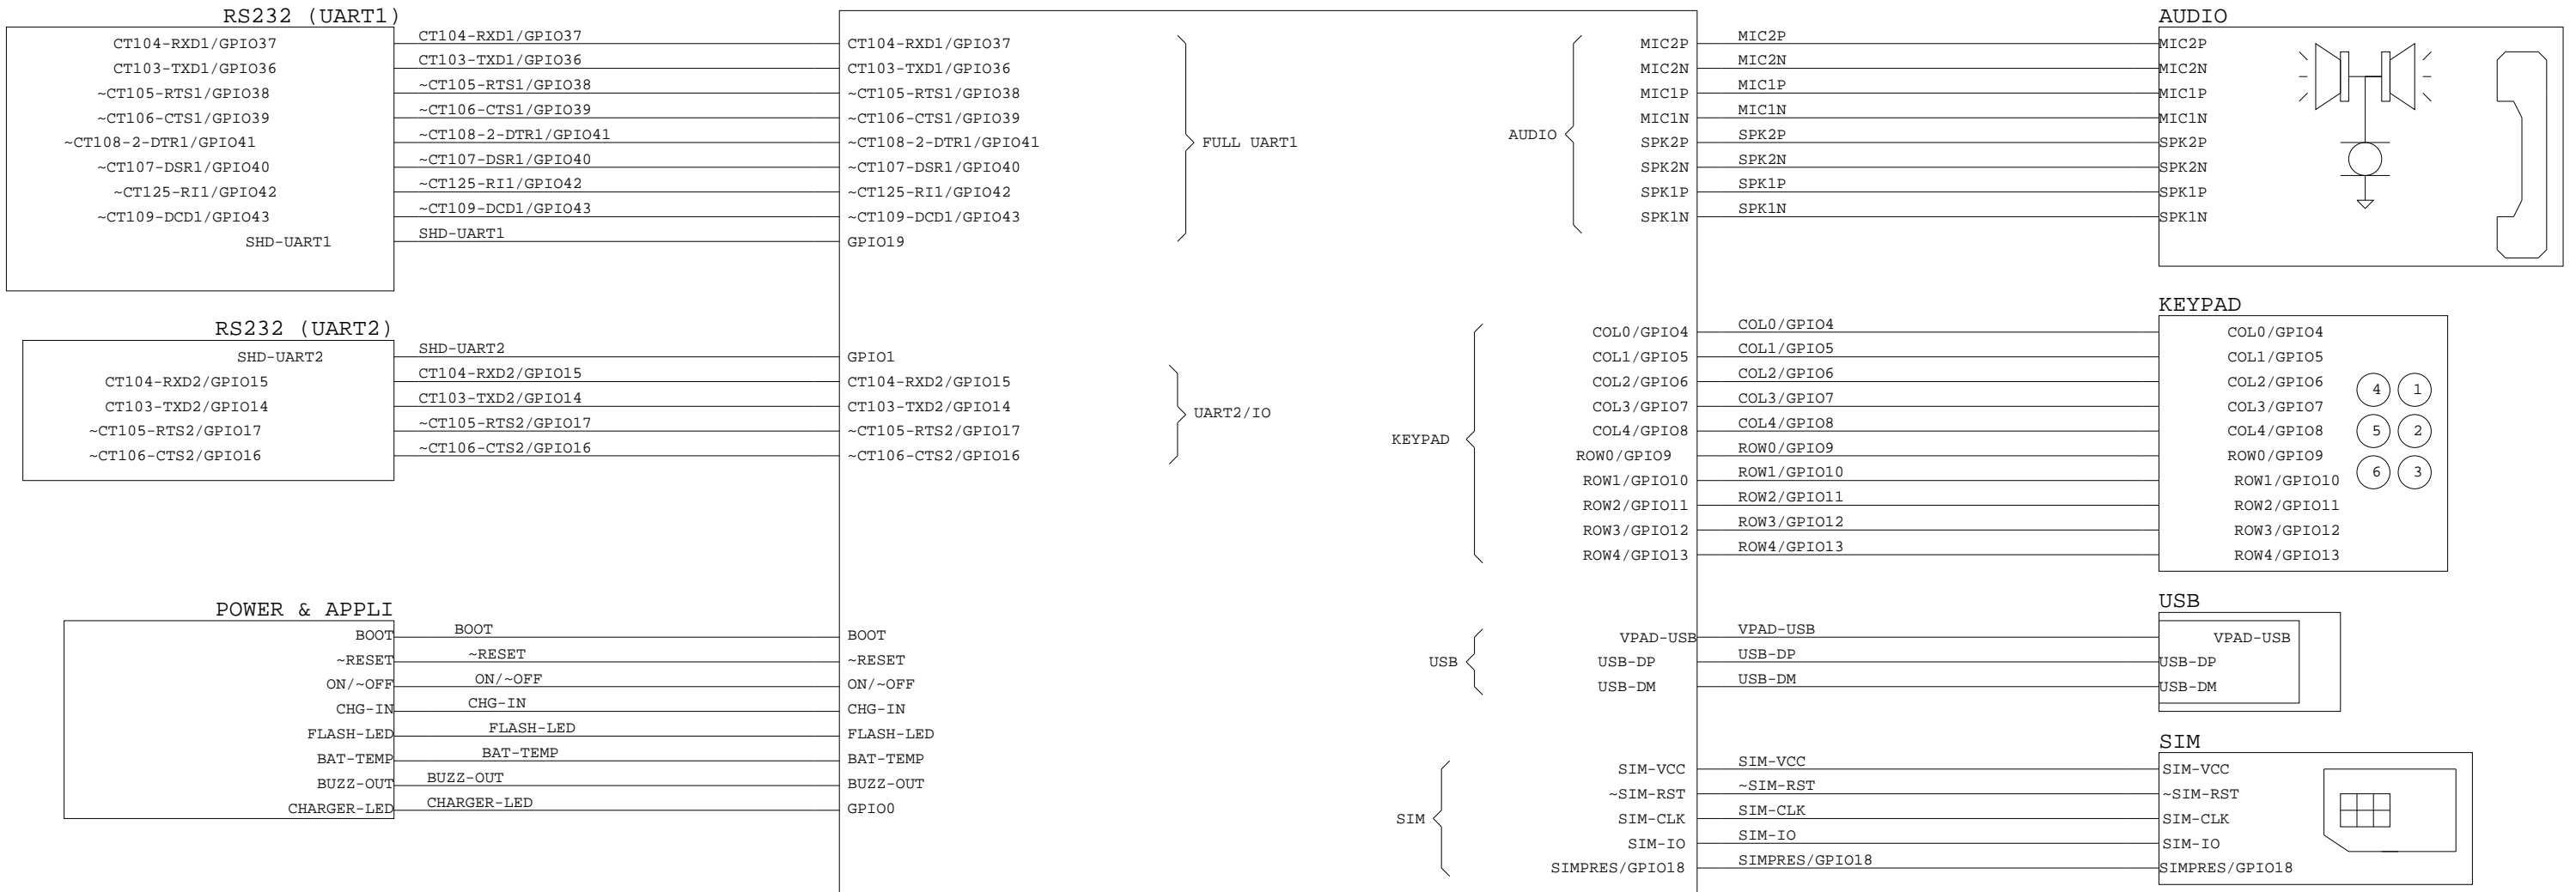

- Using the terminal emulator, send the following command on COM port to communicate with the WISMO module: **AT**↵.
- When the communication is established between the PC and the WISMO module, the last one sends the message **"OK"** as a reply. The message is displayed in the terminal emulator window.

Refer to doc [4] for communicate between the PC and the WISMO module Q2686.
